WHEREAS, The National Governor's Association's Report on Healthy Living, states that "One in three Maryland babies born in 2001 will develop diabetes during their lifetime, or a third of today's first graders will be tomorrow's diabetic patients"; and

WHEREAS, Based on a study conducted by researchers and economists from Johns Hopkins University and the Centers for Disease Control and Prevention, Maryland's obesity–attributable medical expenditures were estimated at \$1.53 billion in 2004; and

9 WHEREAS, The Centers for Disease Control and Prevention estimate that 10 health care costs directly associated with physical inactivity were \$76.6 billion in 2000; 11 and

WHEREAS, The federal Medical Expenditure Panel Survey estimates that, in 2003, it cost \$277 billion to treat cancer, heart disease, hypertension, mental disorders, diabetes, pulmonary conditions, and stroke in noninstitutionalized Americans; and

WHEREAS, The Johns Hopkins University Partnership for Solutions, in its 2004 update to the study entitled "Chronic Conditions: Making the Case for Ongoing Care", found that more than half of all Americans suffer from one or more chronic diseases; and

WHEREAS, The New England Journal of Medicine, in the 2007 article entitled "Explaining the Decrease in Deaths from Coronary Disease", reported that disease rates have risen dramatically, threatening to cancel out health care gains made over the past decades; and

WHEREAS, The Milken Institute 2007 study entitled "An Unhealthy America: The Economic Burden of Chronic Disease" found Maryland to be the 23rd least healthy state, as judged by its State Chronic Disease Index; and

WHEREAS, The recent study entitled "Cost Effectiveness of Community-Based Physical Activity Interventions" published in the Journal of Preventive Medicine in December of 2008 found that there is clear evidence to link physical inactivity with increased risk of many chronic diseases, including coronary heart disease (CHD), ischemic stroke, type 2 diabetes, breast cancer, and colorectal cancer; and

WHEREAS, That same study found the negative health effects of physical inactivity are paralleled by staggering economic consequences resulting in the annual cost directly attributable to inactivity in the U.S. to be an estimated \$24 billion to \$76 billion, or 2.4% to 5% of national health care expenditures; and

WHEREAS, The Trust for America's Health in its report entitled "Prevention for a Healthier America" found that an investment of \$10 per person per year in proven community—based programs to increase physical activity, improve nutrition, and prevent smoking could save the country more than \$16 billion annually; and

1 2 3 4	WHEREAS, That same study found that the potential annual net savings and return on investment for Maryland with 5 years of spending \$10 per capita in disease prevention programs would yield \$332 million in savings or a return on investment of 6 to 1; now, therefore,
