

**Testimony of
Scott M. Pauchnik
Sr. State and Local Government Affairs Representative
FedEx Corporation
On HB 1483, Personal Delivery Devices
Before the
Maryland House Environment and Transportation Committee
March 6, 2020**

Good afternoon, Chairman Barve, Vice Chair Stein and members of the committee, my name is Scott Pauchnik and I am the Sr. State and Local Government Affairs Representative for FedEx Corporation in the Mid-Atlantic region. FedEx Operating Companies have more than 60 facilities and employ nearly 6000 residents in the state of Maryland. Some of largest and most state of the art facilities in the FedEx network are located in Hagerstown, Baltimore, Gaithersburg and many other areas across the state.

I am here today to support HB 1483 with amendments. FedEx is grateful to Delegate Fraser-Hidalgo for sponsoring this legislation and to the committee for giving us an opportunity to showcase this new and emerging technology.

The legislation before you will pave the way for the next generation of autonomous Personal Delivery Devices (PDDs); demanded by the customer and created to serve businesses and consumers in Maryland safely and efficiently while delivering same day, last mile goods. This includes amongst others FedEx's own Roxo.

The rapid expansion of eCommerce over the last several years has fueled the growth of many industries. The benefits offered by online shopping, such as convenience, more choices, and lower prices, have even become more appealing to consumers with the addition of fast delivery.

However, this creates some unique challenges for our industry and society as a whole. Traffic congestion and pollution are obvious ones. The so-called 'last-mile' delivery from stores and warehouses to the doors of businesses and consumers is the most complex and costly task in the supply chain, particularly in the diverse urban and suburban environment of vehicles, bicycles, pedestrians, and a growing variety of personal mobility devices.

At FedEx, we recognize that our impact is greater than the services we provide. We are committed to being a great place to work, a thoughtful steward of the environment and a caring citizen in the communities where we live and work. We are passionate about sustainably connecting people and places and improving the quality of life around the world. With this mission in mind, FedEx has created the SameDay Bot, Roxo™, a safe and friendly autonomous Personal Delivery Device (PDD) designed to address some of the above challenges.

FedEx is working alongside major national retailers to determine the needs of different customers with many types of products to deliver. For example, auto parts stores often have nearby auto repair shops as their top customers. For them, this technology is an opportunity to quickly deliver needed parts to these auto repair shops. Further, a restaurant is looking at the bot as an option for deliveries, such as hot pizza from its restaurants. General merchandise stores are exploring opportunities to deliver items from its stores to customers nearby the same day. And a home improvement store is considering ways to dispatch material to a nearby contractor in need of supplies quickly. These are just a few of many ways Roxo's capabilities can be utilized in the everyday demand and movement of goods.

Safety and sustainability are the overarching considerations of Roxo's design. It is built on the iBot wheelchair base engineered by DEKA Research and Development Corporation, with over 10 million hours of error-free operation. Here are some of Roxo's key features:

- Roxo is a zero-emission, battery-powered Personal Delivery Device.
- Roxo is capable of traveling at variable speeds and is programmed to operate within approved speed limits.
- Roxo possesses a sophisticated set of pedestrian safe technologies from the iBot base, plus sensors like LiDAR, radars and multiple cameras for complete awareness of its surroundings.
- It also utilizes advanced 'machine learning' algorithms to detect and avoid obstacles, plot a safe path, and follow all applicable road and safety rules.
- Roxo is able to communicate using a built-in projection screen, turn signals and sounds and is designed with a taller profile for pedestrian and driver visibility.
- Proprietary technology makes the Roxo highly stable, allowing it to negotiate curbs, unpaved surfaces, and even steps for a door-to-door delivery experience.
- Roxo is remotely monitored at all times and can be operated remotely when needed.

I also provided your committee with a handout offering some additional information about Roxo.

In closing, it is our hope that Maryland continues its proven track record of welcoming the development and application of new technologies within the state. As I said earlier, FedEx supports HB 1483 with amendments. We are asking this committee to consider removing the allowable weight for a Personal Delivery Device and to increase the speed on sidewalks to 10mph. Roxo stands nearly 4 and half feet tall and is equipped to carry up to 100lbs of payload. Unlike some of the smaller sidewalk robots, Roxo relatively tall profile makes it easily visible at eye level to pedestrians, bicyclists and motorists. Current weight restrictions prohibit Roxo from operating in the State of Maryland. The weight restriction must be omitted for Roxo to operate in Maryland. Please consider amending HB 1483 to include Roxo. Thank you for your time and attention.
