

I am writing to oppose HB1084. This bill would put the patient-parent-doctor relationship at risk. Medical decisions are best made between a doctor who knows the patient and understand the risk/benefit of medical procedures. My daughter has had life threatening reactions to vaccines. Her medical provider, who understands her medical history should be the only one making the decision what medical procedures are in her best interest.

Please oppose this bill and protect the patient- doctor-parent relationship.
