

Strongly oppose SB 840

This bill should be vehemently opposed and stopped from ever becoming a law. It would create an electronic vaccine passport and would also give pharmacists, and possibly their assistants, the ability to authorize and administer injections to children 3 years old and older without even having parental informed consent.

It also extends emergency authorizations for a pandemic that no longer exists. Vaccine passports are a complete invasion of privacy and lead to discrimination.

This bill was supposed to expire at the end of 2022 and it should expire **now** along with all the authorizations given in the original bill.
