World's Largest Cricket protein 'factory' completed in Ontario – *"you really will eat ze bugs"*:

Aspire's new plant will reportedly produce **9000 metric tons of crickets every year for human and pet consumption.** – about **two billion insects** to be distributed annually across Canada and throughout the United States.

Aspire also reports that it **already has orders for the next two years.**

What about that?

The Government of Canada gave Aspire \$8.5 million to expand their smart tech cricket powder manufacturing plant in London Ontario under the GOC AgriInnovate Program.
Seems the government believes in humans eating bugs before we leap to food replicators.
