

Americans For Safe Access Maryland fully supports HB1135, Medical Cannabis in medical facilities. We would encourage our medical fields and lawmakers to treat medical cannabis as a first option medicine. Many times, cannabis can completely replace the need or want for opioids, which usually leads to addiction. Cannabis can be used in many forms, and can be used safely and effectively in a hospital setting. We have already determined that cannabis IS medicine, so let's use it as such.
