

Reliable Data Are Key to Strengthening Maryland's Care Infrastructure

Position Statement in Support of House Bill 189

Given before the Senate Finance Committee

Home care workers are a vital part of the social infrastructure that keeps Maryland going. These workers provide essential services to aging Marylanders and Marylanders with disabilities. They provide long-term care in the community, rather than in residential facilities, which brings many documented benefits. But today we face a severe and growing labor shortage in the industry. While the causes of this shortage are not mysterious – most importantly, low wages undermine efforts to attract and retain a sufficient workforce – policymakers lack the high-quality data needed to solve this problem. House Bill 189 would increase the state's knowledge base on home care workers' wages and agencies' cost structures, enabling policymakers to set appropriate reimbursement rates, raise wages, and build a stronger workforce. **For these reasons, the Maryland Center on Economic Policy supports House Bill 189** as amended.

Maryland already has a serious shortage of home care workers.ⁱ Without a significant influx of new workers into the industry, this shortage will only grow in coming years as our state's population continues to age. Maryland's 65+ population grew by 18% from 2015 to 2021, while the 20–64 population increased by only 0.2%. By 2030, our 65+ population is projected to grow by another 29% as the 20–64 population slightly declines.ⁱⁱ At this rate, we will be increasingly unable to meet the need for home care as time goes on.

Policymakers cannot make good decisions without high-quality information. Our current home care system does not produce the kind of workforce data needed to manage Marylanders' growing home care needs effectively.ⁱⁱⁱ We have made limited progress on this front recently, as lawmakers in 2022 enacted legislation requiring home care agencies to report to the state the number of workers they classify as employees and the number they classify (in most cases inappropriately) as independent contractors. However, policymakers still lack data on the most important variable for strengthening this workforce – wages.

As amended, House Bill 189 would build policymakers' knowledge base by requiring agencies to report to the state their average, lowest, and highest hourly wages paid to home care workers. At the same time, the bill minimizes burdens on home care agencies, requiring only a small amount of high-level, aggregate data.

For these reasons, the Maryland Center on Economic Policy respectfully requests that the Senate Finance Committee make a favorable report on House Bill 189 as amended.

Equity Impact Analysis: House Bill 189

Bill summary

House Bill 189 as amended would require home care agencies to report to the state their average, lowest, and highest hourly wages paid to home care workers, as well as other information the Maryland Department of Health deems appropriate.

Background

Maryland currently faces a shortage of long-term care workers.^{iv} As the state's population continues to age in coming years, the needs for these services will grow significantly. Absent a substantial increase in the supply of long-term care workers, the shortage will become more severe.

Equity Implications

The data required under House Bill 189 as amended would strengthen the state's ability to meet Marylanders' growing home care needs. This is especially important for Marylanders with disabilities, who are a major population served by home care workers.

To the extent that policymakers use these data to improve wages, House Bill 189 will also benefit home care workers, a group that disproportionately includes workers who face structural barriers in our economy:

- 84% of home care workers in Maryland are women.
- 60% of home care workers in Maryland are Black, and 74% are workers of color.
- 61% of home care workers in Maryland are women of color.
- 42% of home care workers in Maryland were born outside the United States.
- Home health and personal care aides in Maryland typically took home only \$15.26 per hour in 2022.^v For a misclassified worker, this is equivalent to \$14.00 paid to an employee.

Impact

House Bill 189 as amended would likely **improve racial, gender, disability, and economic equity** in Maryland.
