

Favorable with Amendment HB 370

Research is lacking and the patients affected by chronic conditions suffer greatly and need substantial help. It is great to be able to assist the patients in any way possible.

However, often such chronic conditions arise as a result of many other infections besides Covid. Furthermore, chronic illnesses can be caused by medical treatments, drugs, or vaccines. All such conditions cause long-term suffering and could benefit from additional research and support.

Please amend the bill to expand the coverage to other infections, drugs, and vaccines.

Sincerely,
Mark Meyerovich
