

**HB 934 – Radiation Therapy, Radiography, Nuclear Medicine Technology, and Radiology
Assistance – Limited Licensed Radiologic Technologist**

Position: ***Support***

Dear House Health & Government Operations Committee:

My name is Tasleem Muzawar and I completed the LRT program on November 6, 2022, and was hired on May 21, 2023, as a Limited RT. It took me about 9 months to complete the program and found the LRT program to be intense with exams, tests, competencies, and reviews. I was ready for the VA ARRT exam which I passed. I officially received my License in VA and I worked with experienced RTs during my clinical training. I am evaluated and monitored regularly by my radiology managers and my lead techs. I am very happy that I had this opportunity to begin my radiology career with MedStar Health and I look forward to advancing as a certified RT. While I was working as an LRT, I was able to complete my necessary pre-requisite courses to apply to the 2 year RT program. I am fortunate to be a role model to my two daughters in showing them how hard work and persistence you can accomplish your goals.

I respectfully ask that you give HB 934 a ***favorable*** report.

With Warm Regards,

Tasleem Muzawar
