To Whom It May Concern:

My name is Daniel Broder and I am a resident of Hyattsville, MD. I highly encourage the committee to pass this important piece of legislation. Data centers are incredibly destructive for the environment and will provide minimal economic impact for state residents. There is a strong likelihood that the generative AI that they are being built to support will be outdated within the next 10-20 years. Additionally, many of the companies that utilize these AI services, like Meta and OpenAI are reckless and exploitive of the data and intellectual property generated by people. Please pass this bill and others that further regulate data centers.

Best,

Dan Broder
