

## HB 277 Environment – Water Bottle Filling Stations Requirement

**Date:** February 5, 2025

**Position:** Support

Dear Chair Korman, Vice-Chair Boyce, and members of the Environment and Transportation Committee:

We enthusiastically support the goal of reducing plastic waste and making it easier for Marylanders to use reusable water bottles. According to the OECD, global **production of plastic is projected to triple by 2060**. One of the key drivers of the increase is packaging – including single use plastic bottles.

Only a small fraction of plastic is recycled, and the rest is disposed of or mismanaged. Locally, in Maryland, at the Baltimore Waterfront Partnership's 2024 fall count of trash in "one" dumpster, **1,973 plastic bottles** were found. The Trash Wheels can collect 16 dumpsters worth of trash during a single rainstorm. We have all noted the proliferation of plastic trash and bottles along our roadways. We must do better.

HB 277 increases opportunities for Marylanders to save money and use a reusable water bottle on the go. As we have seen at airports and schools, these water refill stations work. People use them. Let's make this the norm. HB 277 gets this policy option underway efficiently – adding the stations with public drinking water fountains in new construction or certain renovations.

We commend and thank Delegate Ruth and co-sponsors for initiating this common sense and effective proposal.
