

Testimony for HB0372 – Hospitals: Emergency Pregnancy-Related Medical Conditions – Procedures

February 11, 2026

I strongly urge support for HB0372 to protect women from being secretly or coercively administered abortion-inducing medications. Every woman deserves informed, voluntary medical care, and no hospital or doctor should be compelled to violate their deeply held religious or moral convictions.

This bill also protects the integrity of sex-based girls' sports and ensures access to sex-specific facilities, which are critical for fairness and safety. Legislators must not force pro-life hospitals or healthcare providers to participate in abortions, which end the life of a preborn child, in violation of conscience rights.

HB0372 safeguards both patients' rights to informed care and healthcare providers' rights to act in accordance with their ethical and religious beliefs. Upholding these protections is essential for a just and moral healthcare system.
