Summary of Issues

Achieving the State's Point Source Nutrient Reduction Goals through Wastewater Treatment Plant Improvements: The Chesapeake Bay Agreement and a Executive Order currently lay out aggressive goals for reducing nutrients levels from wastewater treatment plant effluent. **The Maryland Department of the Environment (MDE) should be prepared to brief the committee on the current administration's point source nutrient reduction goals. Specifically, MDE should explain whether all tenets of the November 2002 Executive Order are still in effect; the status of implementing this Executive Order; and the costs associated with meeting the point source nutrient reduction goals in the Executive Order and the Chesapeake Bay Agreement.**

Summary of Recommended Actions

1. Concur with Governor's allowance.

Overview

The fiscal 2004 allowance includes \$72.8 million in PAYGO and \$8.2 million in general obligation (GO) bond capital funds. This represents a 37.6% increase from the fiscal 2003 appropriation. The allowance provides required State matching funds for both loan programs in the general obligation bond capital budget; in fiscal 2003, general funds were used for this purpose. The increase in the Water Quality Revolving Loan Fund is the direct result of increased demand for loan funds.

In the past, federal funds received for the Water Quality and Drinking Water Revolving Loan Funds were labeled as special funds instead of federal funds. A June 2002 legislative audit found this practice problematic and has prompted MDE, the Department of Budget and Management, the Office of the Comptroller, and the State Treasury to develop a new, mutually agreed upon accounting practice. For budgeting purposes, MDE has agreed to represent these revolving loan funds as federal funds. This adjustment makes it appear that the loan programs are receiving large federal funding increases, when in fact they are not.

Consolidated Administrative Expenses – All Programs

	FY 2002	FY 2003	FY 2004
Sources:			
Special Funds			
Water Quality Revolving Loan Fund	\$1,721,204	\$1,881,000	\$1,938,000
Drinking Water Revolving Loan Fund	206,948	161,880	167,580
Subtotal Special Funds	\$1,928,152	\$2,042,880	\$2,105,580
General Funds	52,858	44,000	51,000
Federal Funds			
Water Quality Revolving Loan Fund	325,249	281,600	326,400
Drinking Water Revolving Loan Fund	270,560	339,200	358,400
Total Funds	\$2,576,819	\$2,707,680	\$2,841,380

U00A01 - Maryland Department of the Environment - PAYGO

Uses:			
Direct Expenses	2,215,810	2,340,880	2,453,580
Indirect Expenses	361,009	366,800	387,800
Total Direct & Indirect Expenses	\$2,576,819	\$2,707,680	\$2,841,380

The table (Consolidated Administrative Expenses – All Programs) illustrates the administrative expenses associated with the two loan funds discussed in this analysis. MDE includes salaries and fringe benefits, as well as nonsalary expenses, in its direct expenses. Nonsalary expenses include contractual services such as a financial advisor, a bond counsel, and accountant/auditor, as well as office supplies and materials, travel, training, and professional memberships. Indirect expenses are charged at approximately 28% of salary and fringe benefits for federal funds and at approximately 14% of all special fund expenses. The department includes \$215,000 in general funds in its operating expenses to provide a required 20% match on direct federal expenses under the Water Quality Revolving Loan Fund (WQRLF). No general fund match is required for direct federal expenses under the Drinking Water Revolving Loan Fund (DWRLF).

Water Quality Revolving Loan Fund (Statewide)

PAYGO SF	\$32,596,000	Recommendation:	Approve
PAYGO FF	\$31,170,000		
GO Bonds	\$6,234,000		

Program Description: The Maryland Water Quality Revolving Loan Fund was created to provide low-interest loans to counties and municipalities to finance water quality improvement projects. The fund was established by the federal government in the Clean Water Act of 1987 and by the State of Maryland in §9-204 and §9-1604 Environment Article to replace the federal construction grants program that was phased out. Projects eligible for funding include wastewater treatment plants, failing septic systems, and nonpoint source projects such as urban stormwater control projects. The federal act requires a 20% State match. As of June 2002 the Water Quality Revolving Loan Fund (WQRLF) had executed approximately \$660 million in low interest loans.

Prior to fiscal 2004 this federal grant was budgeted as special funds. However, to comply with audit recommendations, this grant is now budgeted as federal funds.

Year Program Began: 1989

Comments: The fiscal 2004 allowance provides \$32.6 million in PAYGO special funds, \$31.2 million in PAYGO federal funds, and \$6.2 million in general obligation bond funding for WQRLF. The allowance will be used to fund a total of \$70.0 million in projects. Specifically, it will fund seven projects in five jurisdictions (Baltimore City and Baltimore, Anne Arundel, St. Mary's, and Worcester counties). Two projects will improve wastewater treatment plants serving 417,232 residences. Four other projects will improve sewers, stormwater drains, and pumping stations serving 847,122 homes. The final project will close and cap the 28-acre St. Andrews Landfill in St. Mary's County.

The fiscal 2004 allowance includes funding for this program in the PAYGO operating budget as well as the general obligation bond capital budget allowance. In recent years, PAYGO general funds have been used to cover the required 20% State match. However, the fiscal 2004 budget includes the required \$6.2 million State match in the general obligation bond allowance.

Issues

1. Achieving the State's Point Source Nutrient Reduction Goals through Wastewater Treatment Plant Improvements

Background

The Chesapeake Bay Agreement was signed by the Governor of Maryland, along with the Governors of Pennsylvania and Virginia, the Mayor of the District of Columbia, the Administrator of the U.S. Environmental Protection Agency, and the Chair of the Chesapeake Bay Commission. By 2010 the Bay Agreement signatories have committed to correct the nutrient and sediment related problems in the Chesapeake Bay and its tributaries so the Bay is no longer on the list of impaired waters under the federal Clean Water Act. Since wastewater treatment plants treat approximately 95% of the State's total sewage flow to the Chesapeake Bay, they have been identified as a key tool for meeting this goal.

Fiscal 2004 State funds are provided for wastewater treatment plant (WWTP) construction and improvements through MDE's Water Quality Revolving Loan Fund in the PAYGO capital budget and the Biological Nutrient Removal and Supplemental Assistance programs in the general obligation bond capital budget. These grant and loan programs help local jurisdictions offset the expenses associated with removing nutrients (nitrogen and phosphorous) from WWTP discharges. There are two significant technologies being implemented to reduce nutrients in WWTP effluent: Biological Nutrient Removal and Enhanced Nutrient Removal.

- Biological Nutrient Removal (BNR) biologically removes the total nitrogen to an average level of 8 mg/l and the total phosphates to an average level of 3 mg/l prior to discharging the water into the receiving waters.
- Enhanced Nutrient Removal (ENR) takes water that has gone through the BNR process and further refines the effluent physically, bio-chemically, or chemically to an average level of 3 mg/l nitrogen and 0.3 mg/l phosphorous.

Current Status of Major WWTPs in the State

MDE is currently targeting 66 major WWTPs for BNR and ENR upgrades. These facilities account for over 90% of the flows in the State. As illustrated in **Exhibit 1**, there are 41 major WWTPs in operation with BNR technology in place. Of these 41 WWTPs, 29 discharge an average of 8 mg/l nitrogen or better, and 12 are still in the start up phase. Four WWTPs are currently completing BNR construction and 21 are in the BNR design or planning phase.

Currently there are no operational WWTPs with ENR technology in place. However, due to currently low flows, three of the operational BNR WWTPs are achieving an average discharge of 3 mg/l of nitrogen: Fort Meade and Patuxent in Anne Arundel County and Maryland Correctional Institute in Washington

County. There are four WWTPs being designed for ENR: Princess Anne in Somerset County, Northeast in Cecil County, Mattawoman in Charles County, and St. Michael's in Talbot County. All BNR facilities are able to phase in ENR upgrades in the future.

Exhibit 1

Nutrient Reduction Capacity at Wastewater Treatment Plants

	<u>Operational</u>	<u>Construction</u>	<u>Design</u>	<u>Planning</u>
BNR Plants	41	4	7	8
ENR Plants	0	0	4*	0
Total	41	4	11	8

*The Princess Anne WWTP in Somerset County is an operational BNR facility that is in the design phase of an ENR upgrade.

Note: Two WWTPs in Harford County are under the purview of the federal government and are not included above.

Source: Maryland Department of the Environment

November 2002 Executive Order

On November 14, 2002, former Governor Parris Glendening released an Executive Order (01.01.2002.24) establishing goals for reducing nutrient levels from wastewater treatments plants. Specifically, the Executive Order instructed MDE to develop and implement an ambitious ENR policy for wastewater treatment plants. This ENR policy would achieve 40% of the nitrogen reduction necessary to meet the 2010 Chesapeake Bay Agreement goal.

The key requirements of the Executive Order that directly affect MDE are summarized below.

- MDE should prepare a draft strategy to implement the ENR policy for public review by December 31, 2002. A strategy to comply with this requirement has apparently been drafted but has not been released by MDE.
- By the end of 2003, MDE should publish the final ENR strategy documenting the costs and feasibility elements of the 2002 draft strategy. This document will include recommendations for State grant and loan funds to provide incentives for all facilities to develop treatment plant designs capable of achieving the enhanced wastewater treatment goals.

U00A01 - Maryland Department of the Environment - PAYGO

MDE estimates that implementation of the proposed ENR strategy will cost between \$500 million and \$1 billion. These estimates are based on the approximate incremental capital costs of upgrading BNR facilities with ENR and estimates developed by the Chesapeake Bay Program Nutrient Removal Technology Cost Task Force. MDE is currently working to develop improved cost estimates.

Since 1984 the U.S. Environmental Protection Agency (EPA) has provided over \$126 million in special appropriation grants for BNR upgrades in Maryland. Furthermore, recent legislation and pending reports suggest that there is continued interest at the federal level in helping states address WWTP infrastructure needs. The proposed federal Chesapeake Bay Watershed Nutrient Removal Act (S. 1961/H.R. 4666), if approved, would direct EPA to provide grants to States and municipalities to upgrade municipal wastewater treatment plants located within the Chesapeake Bay watershed. Also, EPA expects to submit a Clean Water Needs Survey Report to Congress in June 2003.

MDE should be prepared to brief the committee on the current administration’s point source nutrient reduction goals. Specifically, MDE should explain whether all tenets of the November 2002 Executive Order are still in effect; the status of implementing this Executive Order; and the costs associated with meeting the point source nutrient reduction goals in the Executive Order and the Chesapeake Bay Agreement.

Recommended Actions

1. Concur with Governor’s allowance.

Fiscal 2004 Proposed Projects

<u>County</u>	<u>Project</u>	<u>FY 2004 Amount</u>	<u>State Share of Total Cost</u>
Anne Arundel	Annapolis WRF Expansion	\$22,586,000	100%

Drinking Water Revolving Loan Fund (Statewide)

PAYGO SF	\$2,616,000	Recommendation:	Approve
PAYGO FF	\$6,453,000		
GO Bonds	\$1,931,000		

Program Description: The Maryland Drinking Water State Revolving Loan Fund (DWSRLF) was established in accordance with a federal capitalization grant approved by Congress in 1996 in anticipation of future federal capitalization grants. This program was authorized by the General Assembly in 1993 to provide loans to counties and municipalities to finance water supply improvements and upgrades. In accordance with the federal legislation, these funds may also be loaned to private parties. The federal act requires that a minimum of 20% of State matching funds for each year's federal capitalization grant be deposited into the fund. As of June 2002 this program had executed approximately \$50 million in low interest loans.

Year Program Began: 1996

Comments: The fiscal 2004 allowance provides \$2.6 million in PAYGO special funds, \$6.5 million in PAYGO federal funds, and \$1.9 million in general obligation bond funding for the Drinking Water Revolving Loan Fund. This funding allowance will be used to fund a total of \$11.0 million in projects. Specifically, it will fund seven projects in seven different jurisdictions (Allegany, Baltimore, Calvert, Carroll, Montgomery/Prince George's, St. Mary's, and Washington counties) that will improve water services for approximately 442,000 residences. The allowance is based on \$850 million in anticipated federal funds to capitalize water supply revolving loan funds throughout the United States. Maryland's share of this national amount is estimated at \$9.4 million, requiring a \$1.9 million State match.

The Governor's fiscal 2004 allowance includes the required State matching funding for this program in the general obligation bond capital budget allowance. In recent years, PAYGO general funds have been used to cover the required 20% State match. However, the fiscal 2004 budget includes the required \$1.9 million State match in the general obligation bond allowance.
