Maryland General Assembly

2002 Session

FISCAL NOTE

Revised

House Bill 675

(Delegate Boutin, *et al.*)

Environmental Matters

Education, Health, and Environmental Affairs

Public Schools - Indoor Air Quality Inspections

This bill requires each local school system to develop a system of monitoring indoor air quality at each public school in the county using the guidelines for healthy indoor air quality established by the U.S. Environmental Protection Agency. The Department of the Environment (MDE), in consultation with the Maryland State Department of Education (MSDE), must develop and distribute a Maryland Public Schools Indoor Air Quality Standards Guide to each public school.

Fiscal Summary

State Effect: None. MDE and MSDE could establish and distribute an indoor air quality standards guide to public schools with existing resources.

Local Effect: Local school expenditures could increase by a minimal amount to perform annual indoor air quality inspections. Revenues would not be affected. **This bill imposes a mandate on a unit of local government.**

Small Business Effect: None.

Analysis

Bill Summary: The Maryland Public Schools Indoor Air Quality Standards Guide must include the guidelines of the U.S. Environmental Protection Agency for healthy indoor air quality; a sample indoor air quality inspection report; and a sample heating, ventilation, and air conditioning system maintenance schedule and checklist.

Current Law: Public schools are not required to conduct an annual indoor air quality inspection to ensure that the school's air quality complies with the indoor air quality guidelines of the U.S. Environmental Protection Agency.

Background: The U.S. Environmental Protection Agency (EPA) has taken an active role in improving indoor air quality in public schools by documenting the effects of poor indoor air quality and developing resources to assist local school systems in monitoring and improving indoor air quality.

Studies show that one-half of our nation's 115,000 schools have problems linked to indoor air quality. Students are at greater risk because of the hours spent in school facilities and because children are especially susceptible to pollutants. Common factors leading to poor indoor air include failure to:

- control pollution sources such as art supplies and laboratory activities;
- control temperature and humidity;
- control moisture and clean up spills;
- ventilate each classroom adequately;
- adequately perform housekeeping and maintenance operations; and
- use integrated pest management to minimize the use of pesticides.

Failure to respond promptly and effectively to poor indoor air quality in schools can cause severe consequences, including absenteeism, health problems in children and faculty, and the possibility of school classrooms or entire schools being closed. Poor indoor air quality has been linked to asthma-related illness, which is one of the leading causes of school absenteeism.

To assist public schools, the EPA has published voluntary guidelines that address indoor air quality in schools and has developed an *Indoor Air Quality (IAQ) Tools for Schools Kit* that shows schools how to carry out a practical plan of action to improve indoor air problems at little or no cost using straightforward activities and in-house staff. The kit helps school personnel identify, solve, and prevent indoor air quality problems in the school environment through a 19-step management plan and checklists for the entire building. The checklists cover a school building's ventilation system, maintenance procedures, classrooms, and food service areas. The kit also includes a Coordinator's Guide that explains the fundamentals of indoor air quality in schools and procedures for improving the air inside the schools. Schools and local school systems can receive a copy of the IAQ Tools for School Kit at no cost by contacting the EPA. The EPA has developed several training guides to assist schools in improving indoor air quality.

Local Fiscal Effect: The EPA indicates that existing school personnel at little or no additional costs can perform indoor air quality tests. Public schools and local school systems can receive a copy of the EPA's IAQ Tools for School Kit at no cost by contacting the agency. In addition, the EPA has developed several training guides to assist schools in improving indoor air quality. If local school systems utilize existing staff and follow the guidelines established by the EPA, indoor air quality inspections could be performed at minimal cost.
