1012	SB20	1011 HB14		Baltimore Museum of Industry			
3. Senate	Bill Sponso	ors		House Bill Sponsors			
Della				McHale			
4. Jurisdiction (County or Baltimore City)			nore City)	5. Requested Amount			
Baltimore City				\$300,000			

6. Purpose of Bill

Grant to the Board of Directors of the Baltimore Museum of Industry, Inc. for the planning, design, construction, repair, renovation, reconstruction, and capital equipping of the Baltimore Museum of Industry.

7. Matching Fund Requirements

Grantee shall provide and expend a matching fund. No part of the grantee's matching fund may be provided, either directly or indirectly, from funds of the State, whether appropriated or unappropriated. No part of the fund may consist of funds expended prior to the effective date of this Act. The fund may consist of real property and in kind contributions.

8. Special Provisions

Requiring the grantee to grant and convey a certain easement to the Maryland Historical Trust.

10. Description and Purpose of Grantee Organization (3000 characters maximum)

The Baltimore Museum of Industry was founded in 1977. Since 1981, it has been located on the Inner Harbor in Baltimore City. Its physical plant consists of an 1865 oyster cannery (the only one remaining on the harbor) with a c.1960s addition, and the c.1930s Hercules Shipbuilding office building, all located on a four acre waterfront campus. BMI's mission is to collect, preserve, and interpret the industrial and technological heritage of the Baltimore region for the public by presenting educational programs and exhibits that explore the stories of Maryland's industries and the people who created and worked in them. BMI welcomes over 80,000 school children (from 19 of Maryland's 24 political subdivisions) annually, who participate in one of many award-winning educational programs developed by the museum. Visitation at the museum is approximately 160,000 per year. The museum is an important community asset and works with partners throughout the region to foster awarness of Maryland's heritage.

11. Description and Purpose of Project (3000 characters maximum)

This project supports significant capital reinvestment into the historic structures on the museum's waterfront campus, as well as other capital improvements that will enhance our visitors' experience. The Platt Oyster cannery and the Hercules building need exterior capital work (roofs, new windows, masonry repair) throughout. In addition, specific repairs to the Platt building are required to stabilize and repair brick walls that have deformed because of failing brick. The existing steel frame windows need to be stabilized and/or replaced to stop the damage they are causing to the historic masonry fabric of the building. HVAC upgrades are required both because of aging equipment and the need to install more energy efficient units that will reduce operating costs and improve the climate control for the museum's artifact collections. Restroom upgrades are required to more fully comply with current ADA standards. The Platt building (the main museum space) also requires the installation of an elevator to make the second floor space fully accessible as a potential expansion area.

Complete modernization of the museum sprinkler system is also required, as well as permanent steel shoring of the corner oriel window, the most distinctive architectural feature of the Platt building. In the Hercules building, new windows are required to increase energy efficiency and to stop water leaks that have caused the building to flood in the past. The existing elevator needs upgrades to fully meet all ADA standards, and the existing roof needs significant repair and/or complete replacement. In both buildings, improved locking systems on doors and windows are required to improve access and security. Access control gates to the property are needed to increase security when the museum is closed to the public and overnight.

A campus wide public address system is required for security and to improve coordination of services while multiple groups are visiting. The outdoor pavilion on the campus requires a new all-weather enclosure system so that it may be used by groups throughout the year. Improved (ADA standard) docking facilities are needed to provide water taxi service to the museum from other Inner Harbor sites.

Round all amounts to the nearest \$1,000. The totals in Items 11 (Estimated Capital Costs) and 12 (Proposed Funding Sources) must match. The proposed funding sources must not include the value of real property unless an equivalent value is shown under Estimated Capital Costs.

28. Comments: (3000 characters maximum)

- 1. BMI's campus is made up of three contiguous parcels: 1415, 1425, and 1437 Key Highway. The museum owns 1425 and 1437, and leases 1415 on a long term renewable basis from the City of Baltimore. There are ongoing discussions with the City of Baltimore to transfer ownership of the 1415 parcel to BMI.
- 2. BMI leases its water rights (not any of its land) to the Downtown Sailing Center, a non-profit educational organization. This lease does not affect any of the areas subject to this project except for a potential dock for the water taxi. Space for the dock has been coordinated with the Sailing Center.
- 3. All of the campus structures are already subject to Maryland Historical Trust easements because of past state funding from multiple sources.
