EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.

[Brackets] indicate matter deleted from existing law.

1 Quality and Cost Council established in 2007 by Governor Martin O'Malley's  
2 Executive Order 01.01.2007.24; and

3 WHEREAS, Since its inception, the Council has brought together private and  
4 public partners to build on existing quality and cost control efforts underway in the  
5 private sector; leverage grant opportunities from the federal government; and launch  
6 new initiatives to become a national leader in advancing evidence-based medicine,  
7 patient-centered medical homes, strategies to encourage wellness, prevention and  
8 chronic care management, and the reduction of healthcare-associated infections, and  
9 in other efforts to improve quality and control costs; and

10 WHEREAS, The federal Patient Protection and Affordable Care Act (ACA)  
11 offers an additional opportunity for states to address the urgent need to improve  
12 quality and rein in the runaway costs that threaten the long-term viability of our  
13 health care system; and

14 WHEREAS, Health economists and other experts agree that current health care  
15 spending in the United States is unsustainable; in 2009, the country spent on health  
16 care an estimated \$2.5 trillion, or 17.3% of gross domestic product, with this amount  
17 likely to increase to 19.6% by 2019; and

18 WHEREAS, A 2010 study by the Commonwealth Fund shows that as  
19 Americans' per capita health care spending has increased at more than twice the rate  
20 of twelve other developed countries, our life expectancy has slipped further and  
21 further behind; and

22 WHEREAS, Another 2010 study assessing multiple measures of health care  
23 shows that despite spending more than twice as much per capita as six other  
24 developed countries, the United States scores last overall, and ranks last or near the  
25 bottom in safety, equity, efficiency, access to primary care, quality, and foregoing care  
26 because of cost; and

27 WHEREAS, Other indicators also make clear the need for quality  
28 improvements and cost control; for example, almost 100,000 Americans die each year  
29 from medical errors in hospitals, and patients receive only 55% of the care  
30 recommended for their health conditions; and

31 WHEREAS, Chronic illnesses, such as cardiovascular disease, cancer, and  
32 diabetes, are among the most prevalent, costly, and sometimes preventable health  
33 problems, accounting for 70% of all deaths and 75% of all health care costs; and

34 WHEREAS, While Maryland's health and quality rankings show significant  
35 strengths, they also suggest the need for improvement; and

36 WHEREAS, In the United Health Foundation's annual assessment of the health  
37 of state populations, Maryland is above average, ranking 21st overall and 20th in  
38 health determinants; the State ranks even higher on some specific indicators, placing  
39 6th in smoking prevalence, 10th in immunization coverage, 2nd in per capita number

1 of primary care physicians, 5th in percentage of children in poverty, 16th in  
2 self-reported health status, and 17th in cardiovascular disease; and

3 WHEREAS, Maryland in recent years also has made significant gains in certain  
4 areas, with rates of preventable hospitalizations, smoking prevalence, and  
5 cardiovascular and cancer deaths all decreasing markedly; and

6 WHEREAS, On other measures, Maryland ranks in the lower half of states,  
7 placing 33rd in health outcomes overall, 32nd in early prenatal care, 31st in  
8 premature deaths, 32nd in cardiovascular and cancer deaths, 34th in diabetes, 35th in  
9 geographic disparities, 41st in infant mortality, and 50th in infectious diseases; and

10 WHEREAS, Health disparities also persist in the State, with rates of diabetes,  
11 infant mortality, obesity, and other indicators varying by race and ethnicity, and  
12 disparities persisting for ten of the fourteen leading causes of death; and

13 WHEREAS, Maryland's implementation of the ACA is projected to reduce the  
14 number of the State's uninsured by half; and

15 WHEREAS, This coverage expansion will fall short of its potential to improve  
16 health without a dual focus on improvements in the quality of care afforded to both the  
17 current and newly insured; and

18 WHEREAS, Maryland's implementation of the ACA is also projected to save the  
19 State \$829 million over the next 10 years; and

20 WHEREAS, These substantial savings will begin to reverse themselves at the  
21 end of the decade unless the State succeeds in bending the cost curve and significantly  
22 reducing growth in health care spending; and

23 WHEREAS, Maryland recognizes that achieving this imperative to improve  
24 health care quality and control costs will require sustained leadership, innovation, and  
25 coordination; and

26 WHEREAS, Maryland seeks to ensure that the Health Quality and Cost  
27 Council continues to provide this critical leadership and collaboration between the  
28 public and private sectors to promote better health and health care value; now,  
29 therefore,
