House Bill 809

(Delegate Afzali, *et al.*)

Environmental Matters

Education, Health, and Environmental Affairs

Agriculture - Maryland Standard of Identity for Honey

This bill establishes a Maryland standard of identity for honey and various criteria that must be met in order for a product to meet the standard. The standard applies to (1) all honey produced by honey bees from nectar; (2) all styles of honey presentation that are processed and ultimately intended for direct consumption; and (3) all honey packed, processed, or intended for sale in bulk containers as honey that may be repacked for retail sale or use as an ingredient in other foods. A product that conforms to the standard of identity for honey may be designated as “honey.” If a food product contains ingredients in addition to honey, or if processing materially changes a material characteristic of pure honey, the name of the product must distinguish the product from pure honey and designate the food additive or modification. The bill also authorizes certain specific designations to identify certain types of honey. A person who suffers damages as a result of a violation of the bill’s provisions may bring a civil action for damages in court. The Maryland Department of Agriculture (MDA) is not required to enforce the bill’s provisions.

Fiscal Summary

State Effect: Any criminal penalties imposed for violations of the bill are not expected to materially affect State finances or operations.

Local Effect: Any criminal penalties imposed for violations of the bill are not expected to materially affect local government finances or operations.

Small Business Effect: Potential meaningful.

Analysis

Current Law: The Secretary of Agriculture has specified authority under State law to certify farm products, including honey. The Secretary is authorized, when requested by a person financially interested in a farm product, to examine the product on the basis of MDA or U.S. Department of Agriculture (USDA) standards and provide the person with an official certificate.

Pursuant to provisions under Title 5 (“Pesticide and Pest Control”) of the Agriculture Article, the Secretary is required to inspect apiaries (places where one or more bee colonies may be maintained) and honey houses (structures where honey is extracted and processed for sale), and a beekeeper must register annually with MDA each colony maintained. The Secretary has specified authority to address colonies or bee equipment infected with an infectious bee disease, and specified documentation and permitting requirements apply to colonies or used bee equipment shipped or transported into the State.

Under the Agriculture Article, a person who violates a provision of the article is guilty of a misdemeanor and, unless another penalty is specifically provided, is subject to a fine of up to \$500 and/or imprisonment for up to three months. A person found guilty of a second or subsequent violation is subject to a fine of up to \$1,000 and/or imprisonment for up to one year.

Background: Honey is produced in every state and a significant amount of honey is also imported. Concern exists about adulterated and contaminated honey, largely with regard to imported honey. Corn sugar, cane sugar, and water may be added to honey to increase profit, and pesticides and antibiotics may be present in honey because of bad manufacturing practices. There is currently no mandatory federal or State standard for honey.

MDA’s Food Quality Assurance Program offers voluntary certification to producers and processors for agricultural commodities such as eggs, poultry, meat, grain, fruits, and vegetables to USDA and/or MDA standards. MDA does not currently certify honey. MDA also enforces mandatory standards for eggs under the Maryland Egg Law.

The Department of Health and Mental Hygiene licenses and inspects food establishments (food service facilities and food processing plants) and engages in various other efforts relating to the safety and quality of food in the State.

Small Business Effect: Small businesses in the honey industry may benefit from the establishment of the standard of identity for honey under the bill and the authorization of civil actions to be brought by persons suffering damages from violations of the bill’s

provisions. Efforts to establish standards for honey are intended, at least in part, to protect producers, whether large or small businesses, that are producing unadulterated honey that meets established standards. Legislative Services notes, however, that the bill will not be actively enforced by the State, potentially lessening any benefit to those small businesses.

Additional Information

Prior Introductions: HB 1553 of 2010, a similar bill which required MDA to adopt regulations to establish honey standards, received a hearing in the House Environmental Matters Committee, but no further action was taken.

Cross File: None.
