2023 Session
HB1066

**Hate Crimes - Commission on Hate Crime Response and Prevention - Establishment**

**Bill Summary**

This bill establishes the Commission on Hate Crime Response and Prevention to make recommendations to address hate crimes in Maryland. On or before December 1, 2024, and each year thereafter, the commission is required to produce (1) a report to the Maryland State Department of Education with policy recommendations to address hate crimes in schools and (2) a report to the General Assembly with legislative recommendations on addressing hate crimes in the State.

**Racial Equity Impact Statement**

The 2021 Hate Bias Report, which is compiled by the Department of State Police (DSP) in partnership with the Maryland Coordination and Analysis Center (MCAC), shows that the majority of victims of race/ethnicity/ancestry (R/E/A) hate bias incidents in Maryland were Black or African American individuals. To the extent that the commission’s recommendations and any subsequent policies are implemented, all victims of hate bias may benefit from those policies. Depending on the specific measures that may be implemented as a result of the commission’s recommendations, Black or African American hate bias victims may be impacted to the greatest extent.

**Analysis**

The bill would establish a commission composed of various public and private entities and stakeholders tasked with the development of strategies to prevent and respond to hate crime activities in schools, and evaluate State laws and policies on hate crimes in general. On or before
December 1, 2024, and each year thereafter, the commission would report its recommendations to the Maryland State Department of Education and the General Assembly.

According to the 2021 Hate Bias Report compiled by DSP and MCAC, a total of 388 hate bias incidents were reported in 2021. As shown in Exhibit 1, incidents motivated by anti-Black or African American sentiment were the most frequent type of hate bias report.

**Data on Race-related Hate Bias Incidents**

**Hate Crime Victims**

In 2021, there were 347 reported victims of hate bias incidents of which 96 were verified. A verified incident is defined by DSP as one where the investigation leads to a conclusion that the offender’s actions were motivated, in whole or in part, by their bias against a person’s R/E/A, religion, sexual orientation, disability, gender, gender identity, or homelessness. Of the victims from verified reports, 58% identified as Black or African American, 25% were white, 3% were Hispanic, and 8% were Asian or Asian American. Exhibit 2 compares the 2021 racial and ethnic distribution of hate crime victims compared to their proportion of Maryland’s total population.
The DSP data shows that Asians or Asian Americans and Blacks or African Americans are overrepresented among reported hate bias victims. As shown in Exhibit 3, the ratio of Black hate bias victims to the overall Black population in Maryland is 2.01. This means that individuals who identified as Black are twice as likely to be victims of a hate crime incident as compared to their proportion of the State’s population. Asians or Asian Americans had a slightly greater chance of being victims of a hate crime during the 2021 reporting period as well, with a disproportionality ratio of 1.19. While any incidence of hate crime is meaningful, whites, and even more so Hispanics or Latinos, had a disproportionality ratio of less than 1.00 and therefore were less likely to be victims of a hate crime given their proportion of the State’s population.
Similarly, Blacks or African Americans are more likely to be hate crime victims when compared to whites. Exhibit 4 shows how racial disparity ratios vary between the different racial groups with respect to the number of hate bias victims in the State. The DSP data shows that Blacks or African Americans have a racial disparity ratio of 3.78, which means they were almost four times more likely to be victims of a hate crime than whites during the reporting period. Similarly, with a disparity ratio of 2.24, Asians or Asian Americans were more than twice as likely compared to whites to be a victim of a hate bias incident.
Hate Crime Offenders

As shown in Exhibit 5, the majority of hate crime offenders in Maryland in 2021 identified as white. Of the total number of offenders reported by DSP, 50% were white, 15% were Black or African American, 2% were Hispanic or Latino, and 4% were Asian or Asian American. The race or ethnicity of approximately 29% of offenders was unknown.

Exhibit 6 illustrates the disproportionality ratios (over or under representation) of hate crime offenders of a specific race or ethnicity versus their share of the State’s population. The DSP data shows a disproportionality ratio for Blacks or African Americans of 0.52, meaning Blacks or African Americans were less likely to be offenders in verified hate bias incidents reported for 2021 given their proportion of the State’s population. With a disproportionality ratio of 1.06, whites were about as likely to be offenders in hate bias incidents as their proportion of the State’s population but remained substantially more likely to be offenders than the other racial groups measured. Hispanic or Latino and Asian American or Asian hate crime offenders have disproportionality ratios of less than 1.00, so these groups are less likely to be hate crime offenders than their proportion of the State’s population.

According to the DSP data, non-white racial groups are less likely to be offenders in hate bias incidents. Exhibit 7 shows the disparity ratios among the different racial groups with respect to the number of offenders of hate bias incidents in Maryland. When compared to whites, Blacks or African Americans and Asians or Asian Americans were somewhat less likely and Hispanics or Latinos were significantly less likely to be a hate crime offender.

Conclusion

Hate crime prevention and response has significant equity implications. The bill will offer various stakeholders and members of the public, specifically those groups/identities that are most targeted for hate crimes in Maryland, an opportunity to offer input that will assist the commission in its development of hate crime policy. There is not sufficient data to analyze the exact nature of the bill’s impact, as that will depend on the commission’s final recommendations. It is expected that the commission’s findings will provide additional data to assist in impact analyses in the future, especially in regards to other victims of hate crimes based on religion, sexual orientation, gender, gender identity, disability, national origin, or homelessness.

Methodologies, Assumptions, and Uncertainties

Although some reports use disparity and disproportionality interchangeably, this racial and equity impact note distinguishes them. Disproportionality is the state of being out of proportion. It compares the proportion of one racial or ethnic group of a target population to the proportion of the same racial or ethnic demographic group in the general population. Disparity, however, refers to a state of being unequal. A disparity describes an unequal outcome experienced by one racial or ethnic group of the target population as contrast against a different racial or ethnic group in the target population.

The information provided in this note is drawn from quantitative data analysis of available statistical datasets on crime and criminal justice collected by entities at the state level.

Appendix – Maryland Demographics

Race and Ethnicity of the Maryland Population

Maryland’s 2020 census population is 6,177,244, a 7% increase from the 2010 census count and approximately 2% higher than the 2019 census population estimates. In addition to an increase in population, Maryland’s racial demographics have become more diverse. Maryland is now a state in which racial minorities make up a majority of its total population. Notable changes relevant to this shift are the increase in groups who identify as “other” and “multiracial” (i.e., two or more racial identities), which total 5% of the State’s population. Additionally, the change in demographics is due to the decrease in the number of individuals who only report “white” as their racial group. Despite this decrease, non-Hispanic whites remain the largest race demographic group in the State at 47% of the State’s population.

Compared to the U.S. population overall, Maryland’s population of individuals who identify as a single race is more diverse. Maryland is ranked as the fourth most diverse state by the U.S. Census Bureau’s Diversity Index. As shown in Exhibit 1, in Maryland, 47% identify as white alone compared to 58% of the national population. Similarly, 51% of the population identify as non-white or multi-racial compared to 38% of the national population. In both the State and national populations, the largest shares of the non-white population are individuals who are Black or African American, with 29% of the State population identifying only as Black or African American and another 2.5% identifying as Black in combination with some other race. Maryland’s Asian population is 7%, which is slightly higher than the Asian share of the national population of 6%. The State’s overall population by ethnicity, however, is slightly less diverse than the U.S. population; 12% of the State’s population identified as Hispanic or Latino compared to 19% of the U.S. population.
