

### HB 3 Favorable with Amendment

February 6, 2020

Honorable Dereck Davis Chairman Economic Matters Committee

Chairman Davis,

The Maryland Vapor Alliance represents approximately 200 brick-and-mortar vapor shops across Maryland. We are small businesses and defined in statute as vape shop vendors meaning 70% or more of our retail sales are derived from vapor products and accessories such as hardware and liquids. For almost all of our shops, this number is closer to 90% - 100%.

We have helped thousands of Maryland tobacco users transition to vapor products through the use of "open systems" that allow the user to control the amount of nicotine intake. This allows the adult user to decrease their nicotine intake over time. What we sell differs significantly from the products sold in gas stations, convenience stores and pharmacies. The primary product sold by these retailers are "closed systems" with a fixed amount of nicotine. The fixed amount is up to 20x the amount of nicotine per milliliter in an open system. Additionally, the high-nicotine products sold by these shops are traditionally owned by "big tobacco." JUUL is an example of these products and are not a staple of our shops.

We have included an attachment of one year of compliance data for the sale of ENDS/E-Liquids to minors compiled by the FDA for Maryland. You will see almost every product sold to minors is a high nicotine, closed system product and none of the offenses occurred at a shop classified as a vape shop vendor.

Should this legislation pass as drafted, vapor shop vendors will go out of business and adult Marylanders will no longer be able to access low-nicotine, flavored e-liquids they use to stay off combustible cigarettes. You will see in your packets, thousands of customers across the state submitted postcards to their elected officials sharing how flavors used in open systems helped save their lives.

The Maryland Vapor Alliance proposes limiting the sale of flavored products to those shops designated by law as "vape shop vendor." Concurrent with the limitation would be a substantial increase in the penalty for selling to minors with a final penalty of license revocation.

Matt Milby Vice President, Maryland Vapor Alliance 443-421-8669

# The Truth About Vaping: Myth vs. Reality

#### E-Cigarettes Are An Effective Smoking Cessation Tool

In February 2019 the **New England Journal of Medicine** published the study, "A Randomized Trial of E-Cigarettes versus Nicotine-Replacement Therapy" which found:

- ✓ E-cigarettes are far more effective at helping smokers quit than FDA-approved therapies such as the nicotine gum, lozenges and patches
- $\checkmark$  18% of e-cigarettes users were smoke-free after 1 year
- ✓ The e-cigarette group reported greater declines in the incidence of cough and phlegm production

The New York Times

"The study...found that e-cigarettes were nearly twice as effective as conventional nicotine replacement products, like patches and gum, for quitting smoking."

E-Cigarettes Are Effective at Helping Smokers Quit, a Study Shows. 1/30/2019.

As ENDS products have increased in use, the number of cigarette smokers have dropped dramatically:

The Centers for Disease Control reports that the number of U.S. smokers dropped from 20.6% in 2009 to only 15.5% as of 2016

#### E-Cigarettes Are Safer than Combustible Cigarettes & Save Lives

In 2015, 2016, 2017 and 2018, the United Kingdom's Health Agency England and the Royal College of Physicians each conducted a full review of all vapor research and concluded that *vapor products are at least 95% safer than combustible cigarettes*. The UK National Health Service now *promotes ecigarettes as a means to quit smoking*.

In the U.S., the **National Academies of Sciences Engineering and Medicine** conducted its own review of all the research and concluded in 2018:

- ✓ "There is conclusive evidence that completely substituting e-cigarettes for combustible tobacco cigarettes reduces users' exposure to numerous toxicants and carcinogens present in combustible tobacco cigarettes."
- ✓ "There is substantial evidence that completely switching from regular use of combustible tobacco cigarettes to e-cigarettes results in reduced short-term adverse health outcomes in several organ systems."

The National Academies of

"The evidence about harm reduction suggests that across a range of studies and outcomes, e-cigarettes pose less risk to an individual than combustible tobacco cigarettes."

GEONGETOWN UNIVERSITY
Georgetown University Modical Center

Georgetown University Medical Center published its study declaring that if we could encourage people to switch from traditional cigarettes to e-cigarettes we would prevent up to 6.6 million premature deaths annually in the U.S.

## The Truth About Flavors: Myth vs. Reality

#### Science Proves Flavors Help Adult Smokers Quit

Published peer-reviewed research has shown that the flavors in vapor products are essential to helping adult smokers quit and are not the reason that youth vape.

- ✓ Contrary to the popular narrative, adults of all ages like many categories of flavors including fruit, sweet, and cool flavors (Zare. et al., 2018; Harrell, et al., 2017b; Bonhomme, et al., 2016; Berg. 2016; Bowler, et al., 2017; and Krishnan-Sarin, et al., 2014).
- ✓ In the journal **Addictive Behavior**, concluded that flavored vapor was directly related to a reduced amount of smoking amongst adults. (Bun, et al. 2018)
- ✓ In Substance Use & Misuse, Professor Chen from the University of Maryland Department of Public Health concluded that users of non-tobacco and non-menthal flavors were significantly more likely to have quit smoking. (Chen. et al. 2018)
- ✓ As smokers transition from combustible cigarettes to vapor products, they first tend to use tobacco and menthol-flavored e-liquids, but eventually transition to non-tobacco flavors as their dependency on combustible cigarettes decreases (Farsalinos, et al., 2013b; Truman, et al., 2018; Adriaens, et al., 2017; Simmons, et al., 2016).
- ✓ As smokers wean themselves off of cigarettes with vapor products, they move toward non-tobacco flavored products to avoid the taste associated with tobacco flavors that they believe may cause them to relapse into smoking. (Farsalinos, et al., 2013b; Simmons, et al., 2016).
- ✓ Studies conclude that flavors do not significantly increase youth interest in trying vapor products and that flavors are not in the top reasons why youth may experiment. (Pepper, et al., 2016; Pepper, et al., 2013).

#### Bottom Line:

Making it harder for adults to access flavored vapor products will only hinder their attempts to quit and ensure that they smoke longer.

# Health Risks of E-cigarettes

E-cigarettes are still fairly new, and more research is needed over a longer period of time to know what the long-term effects may be.

So far, research has found that using e-cigarette products is likely to be significantly less harmful than smoking regular cigarettes. This is mostly because e-cigarettes do not burn tobacco, a process that produces an estimated 7,000 chemicals, including at least 70 chemicals that cause cancer. But e-cigarettes do contain nicotine, which comes from tobacco and is very addictive.

While the possible long-term health effects of e-cigarettes aren't yet clear, there have been recent reports of serious lung disease in some people using e-cigarettes or other vaping devices. Symptoms have included:

- Cough, trouble breathing, or chest pain
- Nausea, vomiting, or diarrhea
- Fatigue, fever, or weight loss

Some cases have been severe enough to require hospitalization, and several people have died from their illness. However, it's not yet clear exactly how widespread these cases are, or if they all have the same cause. There are a huge number of different vaping devices on the market, and an even larger number of different chemicals (in the form of e-juice) that can be used in them, including ones that users sometimes add themselves. At this time, the main thing these cases have in common is that the people used e-cigarettes or other vaping devices. The US Centers for Disease Control and Prevention (CDC), the Food and Drug Administration (FDA), and several state health departments are looking into these cases to try to figure out what else they might have in common. For the latest information on this topic, see this notice from the CDC (https://www.cdc.gov/tobacco/basic\_information/e-cigarettes/severe-lung-disease.html).

You can learn about answers to other questions about e-cigarettes in What Do We Know About E-cigarettes? (https://www.cancer.org/cancer/cancer-causes/tobacco-and-cancer/e-cigarettes.html)
