**2020 SESSION
POSITION PAPER**

BILL NO: SB 402
COMMITTEE: EDUCATION, HEALTH, AND ENVIRONMENTAL AFFAIRS
POSITION: OPPOSE

TITLE: Health Care Practitioners - Telehealth

BILL ANALYSIS: SB 402 allows health care practitioners to establish a practitioner-patient relationship through a synchronous or asynchronous telehealth interaction (occurs in real-time/occurs not in real-time); allows practitioners to perform clinical evaluations using synchronous or asynchronous interactions; allows texting as a service delivery modality; and prohibits boards from establishing separate standards of care for telehealth.

POSITION AND RATIONALE: The Maryland Board of Social Work Examiners opposes SB 402 – Health Care Practitioners – Telehealth. The role of behavioral health professionals as teletherapists includes performing assessments of psychological and social problems, developing comprehensive treatment plans, and treating patients with both normal and abnormal functioning. In order to successfully perform these tasks, the Board believes that synchronous (real-time) audio-visual interactions are necessary.

Establishing a trusting and productive practitioner-patient relationship while assessing the appropriateness of teletherapy requires that the exchange of information occurs in real-time. Real-time audiovisual interactions allow the therapist and patient to see and respond to each other's cues, like facial expressions, body language, and tone of voice. Similarly, synchronous interaction is required in order to perform an accurate clinical evaluation. Conducting a clinical evaluation requires assessing an individual's behavior, personality, and cognitive abilities, by using a variety of devices, starting with a face-to-face interview with the patient. The more accurate the evaluation, the greater the likelihood of success for any subsequent intervention.

Asynchronous teletherapy interactions can be useful, depending on the circumstance. For example, when following up with a patient or gathering additional information, asynchronous

interactions may be more than sufficient. And texting can be useful when used in the same way emails are used, e.g., scheduling, checking on progress, etc. But texting as a service delivery modality is not a viable alternative when working with people experiencing mental and emotional problems. Because a text message from the patient may not reach the provider at the time when the patient most needs help (e.g. a person confronting domestic violence; a suicidal patient; a substance abuser).

For these reasons, the Maryland Board of Social Work Examiners respectfully requests an unfavorable report on SB 402.

Thank you for your consideration. If you have questions about this matter you may contact Stanley Weinstein, Executive Director, at 410-764-4788 or stanley.weinstein@maryland.gov.
