February 13, 2020

Senate Bill 233: Business Regulation - Flavored Tobacco Products – Prohibition

POSITION: SUPPORT

Thank you for the opportunity to speak today.

Our testimony will be based on our Johns Hopkins Bloomberg School of Public Health report titled “State of the Evidence: Flavored Tobacco Bans or Restriction”. I will speak about the public health impacts of comprehensive tobacco flavor restrictions and a restriction on the sale of *only* flavored e-cigarettes.

The evidence clearly shows that comprehensive flavor restrictions can reduce availability of flavored tobacco products and positively impact the health of youth. In 2010, New York City restricted the sales of most flavored tobacco products. Their evaluation data show that sales of all flavored tobacco products declined by 87% and teens during 2013 had 37% lower odds of ever trying flavored tobacco products and 28% lower odds of using any type of tobacco product. Sales of non-flavored tobacco products did not significantly increase. In 2013, Providence, RI restricted the sale of all non-cigarette tobacco products with characterizing flavors (e.g., mango, strawberry, or mint). Providence subsequently experienced a 51% decrease in flavored cigar sales. 93% of the sales reduction was due to a decrease in the sales of cigars with characterizing flavors. However, sales of concept flavored cigars (e.g., Jazz, Casino, or Royale) actually increased by 74%.

For a similar policy that only applies to e-cigarettes, there may be a positive impact and an unintended consequence. For example, one study asked youth and young adults who use flavored e-cigarettes if they would continue using their product of choice if it were not flavored. They found that the percent who said they would not use their e-cigarette anymore was 66% of those 25-29 years of age, 74% of those 18-24 years of age, 74% of those in high school, and 93% of those in middle school. Another study found that prohibiting flavors in e-cigarettes but permitting menthol cigarettes may drive former smokers to cigarettes.

Thank you for your consideration. My colleague, Naseeb Kibria, will now continue providing testimony.
