To: The Honorable Delores Kelly, Chairman
Senate Finance Committee

From: Jennifer Witten, Vice President, Government Affairs Maryland Hospital Association

Re: Letter of Concern-Senate Bill 944 Hospitals-Care of Infants After Discharge

Dear Chairman Kelly:

On behalf of the Maryland Hospital Association's (MHA) 61-member hospitals and health systems, we appreciate the opportunity to comment on Senate Bill 944. Maryland's 32 birthing hospitals deliver more than 67,000 babies each year and are committed to a safe delivery, hospital stay, and discharge home.

The state's hospitals agree with the intent of Senate Bill 944 and the important role that safe sleep practices have on reducing infant mortality. Sadly, approximately 3,500 infants die every year in the United States from sleep-related reasons.ⁱ In 2018, Sudden Infant Death Syndrome accounted for 13% of all infant deaths in Maryland and was a leading cause of death for infants ages 28 days to 11 monthsⁱⁱ. Since the mid-1990's, the Maryland Department of Health's Perinatal Clinical Advisory Committee has published Perinatal System Standards, which are incorporated into the regulations used by state agencies standardizing obstetrical units and neonatal intensive care units.ⁱⁱⁱ The advisory committee reviews and updates the standards as new research becomes available.

Recently, the standards were revised to also incorporate recommendations from the 8th edition of the Guidelines for Perinatal Care—issued by the American Academy of Pediatrics (AAP) and the American College of Obstetricians and Gynecologists (ACOG). The committee is led by multidisciplinary experts including obstetrical providers, birthing hospital representatives, state agencies and representatives from professional organizations such as the AAP, ACOG and the Maryland Medical Society.^{iv}

SB 944 presents concerns because the Perinatal System Standards already require hospitals to “have a written policy to address infant safety issues including safe sleep, abusive head trauma (shaken baby), and car seat safety.”^v Creating additional requisites concerning infant discharge is duplicative and does not provide the flexibility to incorporate changes to standards of care. Given the importance of safe sleep education, there are numerous initiatives underway to promote awareness in Maryland's hospitals throughout the duration of a mother and baby's stay, not just at discharge.

The Maryland Patient Safety Center includes safe sleep counseling as a component of the Perinatal Neonatal Quality Collaborative, a state-sponsored quality improvement program which

all the birthing hospitals participated.^{vi} Hospitals were provided a tool to audit their efforts to promote a safe sleep culture. In addition, Baltimore City hospitals work closely with the B'More for Healthy Babies to educate and promote safe sleep practices sharing a video with parents to demonstrate safe sleep practices. These activities have also included nurses modeling safe sleep in nurseries, which is a practice recommended by the Centers for Disease Control and Prevention and the AAP.^{vii}

Maryland's hospitals acknowledge the importance of, and actively participate in, safe sleep education for new moms and families prior to each baby's discharge. However, we urge the committee to reconsider a statutory approach given the existence of The Perinatal Standards and the extensive ongoing activities focused on promoting safe sleep in our communities.
