**Bill:** SB 0554- Crimes - Mitigation - Sex, Gender Identity, or Sexual Orientation  
**Position:** Support

Dear Chair, Vice-Chair, and Members of the Committee:

The Maryland Psychological Association, (MPA), which represents over 1,000 doctoral level psychologists throughout the state, supports SB 0554 – that a discovery of another person’s sex, gender identity, or sexual orientation does not constitute provocation that will mitigate killing from murder or manslaughter, and also does not mitigate an assault in the first degree or the second degree or another lesser crime, and generally relating to homicide and assault.

1. The research available indicates that “no evidence indicates that LBGQTQ+ persons pose a threat to non-LGBTQ+ person in public (or private) spaces.” (Ref. 1). Thus, allowing a defense for violence in court that the perpetrator was provoked by just discovering the person was LBGQTQ+ is a violation of the LBGQTQ+ persons civil right of a fair trial.
2. In fact, numerous studies show that LBGQTQ+ persons experience a much higher rate of being the target of sexual and other harassment and assault, from school age on (Ref. 1,2 ); and in fact, according to FBI data are “more likely to be the targets of hate crimes than any other minority group”, including Afro American and Jewish persons (Ref. 3). And these victimization disparities have not changed since they were first measured in the 1990’s (Ref. 1). Thus, legal procedures which allow perpetrators of violence against LBGQTQ+ persons just because of the discovery of their LBGQTQ+ status allow a “green light” on this unwarranted persecution of LBGQT persons.
3. LBGQTQ+ persons also experience higher rates of emotional distress, anxiety, depression, self-harm, substance abuse, and suicide. than the general populace, (Ref. 1, 4), and these higher rates of mental health problems are thought to be because of the stigma, prejudice, and physical threat they anticipate and that the data says exists (Ref.2, 4).

(continue on page 2)

Thus, just knowing there's the possibility of a successful legal defense of violence against LBGTQ+ persons just because of their sexual orientation greatly increases their mental health burden, which we know can increase burdens in physical, economic, and social health.

For these civil rights and public health, the Maryland Psychological Association supports the passing of SB 0554. Please feel free to contact MPA's Executive Director Stefanie Reeves at [exec@marylandpsychology.org](mailto:exec@marylandpsychology.org) if we can be of assistance.

Sincerely,

*Kimberly Y. Campbell*

Kimberly Y. Campbell, Ph.D.  
President

*Julie Bindeman and Nicole Newhouse*

Julie Bindeman, Psy-D and Nicole Newhouse, Psy-D  
Co-Chairs, MPA Legislative Committee
