

**Committee:** Economic Matters  
**Testimony on:** HB379 - “Public Utilities – Low-Income Housing –  
Energy Performance Targets”  
**Organization:** MLC Climate Justice Wing  
**Person**  
**Submitting:** Diana Younts, co-chair  
**Position:** Favorable  
**Hearing Date:** February 4, 2021

Dear Mr. Chairman and Committee Members,

Thank you for allowing our testimony today in support of HB379. MLC’s Climate Justice Wing is a statewide coalition of over 50 grassroots and grasstops organizations focused on climate justice.

Energy efficiency is a proven, cost-effective way to both lower the cost of energy and reduce carbon emissions. Since 2008, when the EmPOWER program was first enacted with a goal of reducing electricity usage by 15 percent by 2015, Maryland has benefited from a performance-target-driven energy efficiency portfolio.

One thing we have learned though, is energy efficiency is easiest to address in newer homes and buildings. This means a large portion of residential building in Maryland are being left behind.

Low-income households in particular face more barriers to address energy efficiency including mold, lead and other health and safety issues because they tend to live in older buildings. As a result, because energy is a regressive cost, low-income households in Maryland dedicate 13% of their annual incomes to energy costs and pay 550% more as a percent of income than non low-income households. The majority of these (55%) are Black, Hispanic, or Asian households. Because of these and other barriers it is more difficult for low-income households to benefit from the EmPOWER program, as compared to high-income households.

The legislature now has an opportunity to fix this, by codifying a complementary performance driven goal for low-income housing. This new, commonsense 1% energy savings goal will allow Maryland to retrofit the 450,000 eligible low-income residents in just

13 years as opposed to 130 years projected under the current program. Lessons learned from the rest of the portfolio, and from energy efficiency resource standards such as EmPOWER Maryland generally, show that they benefit from specific performance targets. Electric utilities under Maryland's portfolio are performance-driven, thanks to the initial 15 percent by 2015 target and the current 2% target. There are no such performance goals for low-income households under programs administered by the Department of Housing and Community Development has no such performance goal. Now is the time to rectify that.

Energy efficiency has already saved Maryland consumers billions of dollars, reduced air pollution and created new economic activity including good jobs. A performance goal for low-income programs is overdue.

For these reasons we urge you to vote favorably for HB0379.
