

**TO: Education, Health, and Environmental Affairs Committee**

**FROM: Hedrick Belin, President, Potomac Conservancy**

**RE: HB 991 Natural Resources – Forest Mitigation Banks – Qualified Preservation**

**POSITION: OPPOSE**

Potomac Conservancy respectfully OPPOSES HB 991 as written, and requests an unfavorable report from the Education, Health, and Environmental Affairs Committee.

If enacted, HB 991 will codify practices that result in greater forest loss during development, without providing an effective preservation benefit. This bill is premature and should be held by the Committee until the forest mitigation study directed by the General Assembly via SB 729 of 2019 is complete.

Maryland loses about 3,000 acres of forest every year. Loss of forest leads to negative public health impacts for Maryland families - poor water quality, reduced carbon sequestration, dirty air, increased temperatures, localized flooding, and lower property values. Development is the single largest driver of forest loss in our state.

Strong forest protection laws are critical to protecting public health for Maryland families. Healthy forests provide our communities with clean water, clean air, wildlife habitat, and natural spaces where we can go for our wellbeing. Passage of HB 991 would see those benefits to the *public* destroyed – now and for future generations -- for short-term *private* gains.

Maryland's Forest Conservation Act was passed in 1991 to reduce forest loss from development. The FCA requires replanting of trees to offset a bare minimum of losses on development sites. This planting requirement leads to a smaller net loss of forest than if the law did not exist.

If adopted, HB 991 would authorize forest mitigation banks to offer credit for placing a preservation easement on trees that already exist, rather than planting new trees. This would allow development projects to remove up to 100% of the forest on a site with no replanting required at all. And it would do so at an unspecified ratio, which could be half or less than half required by the very limited authorization in existing law.

Preservation of existing forest can be a valued part of forest conservation during development, but only with appropriate tools and guidelines in place to identify the most valuable and at-risk tracts. This Committee has identified a number of key questions that need answers before expanding any authorization for forest mitigation banking within the FCA. In 2019, SB 729 was passed by the General Assembly to direct a technical study scoped with extensive stakeholder feedback. That analysis, which is not yet complete, is to report on:

*a review of forest mitigation banking in the State, including:*

- 1. capacity and location of active banks;*
- 2. regulation of citing siting and creation of new banks;*
- 3. geographic limitations on the use of mitigation banks;*
- 4. the relationship between fee-in-lieu rates under the Forest Conservation Act and the market for forest mitigation banks; and*

*5. whether expanding the use of forest mitigation banks could provide water quality improvements and other beneficial results.*

Gathering this information from the technical study is critical to identifying the appropriate role of mitigation banks in maintaining forest cover across the state. Many of the stakeholders engaged on HB 991 are actively participating in this study, and we look forward to its completion. The current FCA regulatory landscape - especially after several counties have strengthened their forest conservation laws in the past two years- is varied, and would not be well served by HB 991's piecemeal approach to mitigation.

In summary, HB 991 would codify a major mitigation policy without information this Committee identified as critical to updating mitigation standards within the FCA. It would do so at half the rate or less that some local jurisdictions operating on a flawed interpretation of existing law are doing now. And it would make these changes without setting any parameters or priorities for the development risk, location, or ecological value of existing forest offered for credit. HB 991 if passed as currently written would provide only short-term private gains, through robbing the public of the clean water, clean air, and other health benefits forests provide. We must not let special interests skirt legal requirements to limit tree removal and replace loss of trees with plantings, and ask you as legislators elected by the public, to protect public health over private profits.

**Potomac Conservancy respectfully requests an UNFAVORABLE report on HB 991 from this Committee.**
