Maryland Department of Agriculture

Legislative Comment

Date: January 20, 2021

BILL NUMBER: House Bill 249

SHORT TITLE: HB 249 - Agriculture – License to Produce Hemp – Limitation

MDA POSITION: Oppose

EXPLANATION:

House Bill 249 would remove the Maryland Department of Agriculture's (MDA) authority to license individuals to grow hemp in accordance with state and federal laws and regulations. This bill would also prohibit MDA from licensing an individual to produce hemp within its Industrial Hemp Program if the applicant's site is within 25 feet of a property or properties with three or more individual residences—unless the applicant agrees to produce hemp in an indoor facility that exhausts fumes, as specified.

BACKGROUND INFORMATION:

MDA's Industrial Hemp Pilot Program has seen significant interest from farmers across the state looking to explore the viability of this emerging agricultural commodity. In 2020, the MDA Industrial Hemp Pilot Program registered 104 growers to grow hemp across 1,220 acres and 609,294 square feet of greenhouse space. The program has already received 22 applications for the 2021 growing season. The enthusiasm for the crop and its uses is very strong.

HB 249 would affect farmers in all counties, but would especially limit opportunities for urban and suburban farmers looking to enter the industry or diversify an existing farm operation. The restriction of land within 25 feet of a property or properties with three or more residents would take thousands of acres of productive farmland out of production for farmers and growers. Under this proposed legislation, a farmer's own home would count as a property if it has three or more residents.

Additionally, HB 249 would require MDA staff to conduct an extensive on-site review for every application, greatly increasing the program's workload and adversely impacting the amount of time and resources required to approve an application.

Applicants would have the burden of proving exactly where their property lines are. If an applicant is unable to meet the requirements to grow outdoors their only recourse would be to construct a facility to grow hemp indoors on their property, which can be cost-prohibitive for many farmers.
