

**Maryland Medical Assistance Program and Health Insurance – Coverage and
Reimbursement of Telehealth Services – HB 551
Health and Government Operations Committee Hearing
February 10, 2021
SUPPORT**

Thank you for the opportunity to submit testimony in support of HB 551 which would make permanent the telehealth service delivery standards for mental health (MH) and substance use disorder (SUD) benefits in Medicaid and private insurance that have been available during COVID-19. Telehealth services, including audio-only service delivery, have been the lifeline for Marylanders during the pandemic. Continuation of these expanded telehealth standards in both Medicaid and private insurance will help address the skyrocketing need for MH and SUD services resulting from COVID-19 and help Maryland recover.

This testimony is submitted by the Legal Action Center, a non-profit law firm that uses legal and policy strategies to fight discrimination, build health equity and restore opportunity for people with substance use disorders, criminal records, and HIV or AIDS. The Center also leads the Maryland Parity Coalition, which issued [Telehealth Recommendations](#) in July 2020 to extend, beyond the public health emergency, the telehealth practices that Maryland Medicaid had adopted early in the pandemic to ensure access to and continuity of MH and SUD care. The Coalition’s recommendations, endorsed by 36 state organizations, form the basis of HB 551 along with the extension of comparable standards to state-regulated private insurance.

HB 551 would adopt 5 essential standards to implement effective telehealth services for MH and SUD care:

- Authorize patients to receive telehealth services in their **homes or wherever they are located**.
- Authorize and require reimbursement for **audio-only/telephonic telehealth** delivered by licensed MH and SUD programs and licensed practitioners consistent with in-person service delivery.
- Require **reimbursement** for telehealth services (both audio-only and audio-visual) **at the same rate as in-person services (“payment parity”)**.
- Protect the **patient’s right to consent** to receive services via the service delivery mode of their choice and retain current network adequacy standards that require member consent to count telehealth for satisfaction of Maryland’s network adequacy metrics.
- Require health plans and Medicaid to comply with the **Mental Health Parity and Addiction Equity Act** so that authorization, utilization management, and reimbursement standards for telehealth are comparable across MH, SUD, and medical/surgical services.

Research to date demonstrates the effectiveness of audio-only and audio-visual telehealth compared to in-person services for MH and SUD care. Other states have adopted these same standards for MH, SUD and other health services in Medicaid and private insurance on a permanent basis. We urge Maryland to build on our telehealth lessons over the past 10 months and do the same to meet the dire need for MH and SUD treatment and ensure continuity of care, post-pandemic.

I. Substance Use Disorders and Mental Health Conditions: Increased Demand for Treatment and Reliance on Telehealth Service Delivery for Care

COVID-19 has traumatized Marylanders, negatively affecting their health and creating significant economic and social hardship. Communities of color have experienced the harsh and disparate impact of COVID as well as mental health and substance use problems. Data reveal higher rates of alcohol and drug use, anxiety, and depression, overdose deaths and suicide across all populations. The need for treatment has never been greater.

- [Overdose deaths from alcohol and drug use increased 12%](#) in Maryland for the first 3 quarters of 2020 compared to 2019.
- [Suicide rates among Black individuals](#) in Maryland doubled during the initial COVID peak (March – May 2020) compared to Black suicide rates in 2017-2019, while suicide rates among whites dropped by one-half of the white suicide rate in 2017-2019 during March through July.
- Providers in [Maryland’s Public Behavioral Health System reported in the fall of 2020](#) that patients receiving MH and SUD services indicated more concerns or challenges with suicidal ideation, substance use and both housing and homelessness than in the spring of 2020 and reported ongoing and high levels of anxiety, depression and loneliness. (Univ. of Maryland Baltimore, “The Effects of COVID-19 on Individuals Receiving Behavioral Health Services and Supports in Maryland: Follow-up Survey” (Nov. 2020) at 17-18) (hereafter “BHA Survey”).
 - As evidence of the need for treatment, the Behavioral Health Administration (BHA) has found that more “new” individuals were seeking MH and SUD services (p. 6, 29) and more individuals were keeping their treatment/service appointments more frequently than in spring 2020. (BHA Survey at 10, 29).
- Parents in Maryland have reported their children are experiencing increased rates of anxiety and depression over the period of mid-July to mid-December 2020: [40% of adults reported living with children experiencing anxiety](#) and [25% reported their children experienced depression](#). (Annie E. Casey Foundation: Kids Count Data Center)
- Calls and online outreach to Maryland’s 211 call center to connect residents with mental health resources increased by 355% in the fourth quarter of 2020 compared to 2019 and text volume increased by 425%.
- Patients who survive COVID have a [significantly higher rate of being diagnosed with anxiety and mood disorders](#) in the 3-month period following their COVID diagnosis than those with other diagnoses.

Telehealth services have been essential for the delivery of MH and SUD care to Marylanders over the past 10 months and has far exceeded the level of service delivery for other health conditions.

- Lt. Governor Rutherford has highlighted the role of telehealth in “lifting barriers” to MH and SUD services during the pandemic and has called for “**continued expansion of the use of telehealth to reduce barriers to service delivery...[and] in particular...the authorization of audio-only telehealth services.**” ([Commission to Study Mental and Behavioral Health in Maryland 2020 Report](#) at p. 3 and Recommendation 10 at 21).

- BHA’s Survey has found that telehealth succeeded in delivering MH and SUD care by: (1) removing the need to travel, (2) providing easier access to treatment and (3) increasing client participation in treatment. (Report at 20, 29). Over one-third of respondents (35%) offered the unsolicited observation that telehealth has “increased patient engagement, decreased no-shows, and increased access for new clients who otherwise may not receive treatment.” (BHA Survey at 26).
- In commercial insurance, the utilization of telehealth for MH care has far exceeded that for any other health condition during the pandemic. FAIRHealth data for the region in which Maryland is located (southern region) show that [utilization of telehealth services for MH](#) **jumped 30 percentage points from 12.5% of claims in Oct. 2019 to 42.8% of claims in Oct. 2020**; the second most frequently billed condition – acute respiratory conditions – accounted for only 5.3% of telehealth claims. Two of the top 5 CPT codes billed were for psychotherapy. Nationally, over 51% of telehealth claims were for MH services in October 2020.

Post-pandemic, the increased need for MH and SUD care will be long-lasting. Telehealth, if properly regulated and reimbursed, will help fill long-standing gaps in access to and availability of MH and SUD treatment in rural and medically underserved areas in Maryland. **No insurance carrier has satisfied the state’s network adequacy requirements for MH and SUD services, in full, for the past 3 years.** Telehealth services, if properly reimbursed, could expand MH and SUD service to those who choose this mode of service delivery.

II. HB 551 Would Authorize Telehealth Services to Meet the Needs of Marylanders with MH and SUDs.

HB 551 would ensure that individuals in both Medicaid and private insurance gain access to effective MH and SUD services through the adoption of 5 key standards.

A. Expand Originating Sites to Include the Patient’s Home or Wherever the Patient is Located

Maryland’s commercial insurance standards do not limit the location at which patients must receive health services care, while state Medicaid regulations limit the “originating site” of services for most health conditions to designated health facility or other settings. COMAR §§ 10.09.49.02, 10.09.49.06. The pandemic has demonstrated the value of patients receiving care in their home or other setting in which they can have a private counseling session. This expansion has allowed patients and providers to have greater flexibility in setting appointment times, has removed the stigma associated with visiting a MH or SUD program or practitioner’s office, and can reduce the “triggers” for drug use that may be associated with neighborhoods in which SUD programs are located. It has also allowed individuals who are homeless or not safe in their home to gain access to essential care at locations in which they can have confidential conversations. While many patients with MH and SUDs benefit from and need direct interaction with peers and practitioners through in-person services, “talk therapy” is uniquely well-suited for remote service delivery, consistent with the individualized treatment plan developed by the patient and provider.

With the elimination of transportation, childcare costs, and travel time, and the ability to reduce time away from work, providers report that patients enter and engage more consistently in treatment. *See* BHA Survey at 20 and 29. Indeed, Healthcare for the Homeless found a lower

rate of “no-show” appointments for patients with telehealth appointments than for those with in-clinic appointments (17.9% v. 18.5%) from April to December 2020 and, more significantly, a sharp reduction in the patient “no-show” rate for in-clinic appointments (25%) for the same period in 2019. (Data on file with Legal Action Center). Finally, providers have reported the therapeutic value of seeing patients in their home or living environment via audio-visual telehealth: it has enabled them to more effectively adjust a patient’s treatment plan and, as appropriate, engage family members in family therapy. **Removal of originating site requirements in Medicaid will lower barriers to care and improve treatment participation.**

B. Authorize and Require Reimbursement of Audio-only Telehealth

Equity in access to health care delivery is not possible without coverage of and reimbursement for audio-only telehealth. Approximately 36% of Marylanders lack access to high speed internet, as defined by the Federal Communication Commission standard, [according to the Maryland Task Force on Rural Internet, Broadband, Wireless and Cellular Service](#). (p. 6). Many other residents lack the technological literacy to use audio-visual telehealth; others cannot afford the cost of internet plans, computers and smart phones needed for audio-visual services. As noted in the BHA Survey, the greatest telehealth challenges that public health system patients have experienced are: (1) access to internet connectivity; (2) access to hardware; and (3) the ability to use telehealth technology. (BHA Survey at 21, 29). “Access to telehealth” was among the services or supports most needed by public health system patients, second only to “continuation of service.” (BHA Survey at 18). While Maryland must devote resources to ensure that all Marylanders have access to audio-visual telehealth, if preferred for service delivery, patients in need of MH and SUD care cannot wait for the digital divide to be bridged. **For this reason, the Lt. Governor’s Mental and Behavioral Health Commission has recommended the permanent authorization of audio-only telehealth for behavioral health care.**

Audio-only telehealth is also essential to ensure health care access for individuals with low incomes. Johns Hopkins Medicine has reported that, during the pandemic, approximately 19% of telemedicine visits have been completed using audio-only modalities and, of those, 24% of patients with Medicaid have used audio-only compared to only 10% of patients with commercial insurance. That utilization rate remained stable for Medicaid enrollees through the end of 2020, while declining for commercially-insured patients.¹

Apart from digital access and income barriers, audio-only telehealth also meets the therapeutic needs more effectively for some patients. Individuals with eating disorders and other mental health conditions are often more comfortable and willing to get care when they do not need to look at themselves – or their provider – on a screen. Providers who use audio-visual telehealth often have patients look away from their screens, as needed, to enable them to work on sensitive issues. MH and SUD providers who have relied on audio-only telehealth during the pandemic have observed that the care delivered through audio-only and audio-visual telehealth is the same. Practitioners have needed to develop different skills and strategies to deliver effective care, but the “talk therapy” is the same service.

Research to date demonstrates that both audio-only and audio-visual telehealth are effective modes of service delivery for individuals with MH and SUD conditions when compared to in-person services. See Attachment 1, Research Literature Review. While more

¹ Testimony of Dr. Brian Hasselfeld, Medical Director, Digital Health and Telemedicine, Johns Hopkins, on SB 3, Senate Finance Comm. Hearing (Jan. 27, 2021) at 2.

research is needed, post-pandemic, patients and providers will determine the appropriate service delivery mix on an individual basis, and audio-only telehealth will be an important option for some. Accordingly, **after 10 months of care delivery through audio-only telehealth, the failure to authorize coverage and reimbursement of this service delivery tool would disrupt care for countless Marylanders and re-erect barriers to care.** As described below, 5 states and the District of Columbia authorize audio-only telehealth for Medicaid and 5 states authorize this delivery mode in private insurance on a permanent basis.

C. Require Payment Parity for MH and SUD Care in Both Medicaid and Private Insurance.

Pre-pandemic, Maryland Medicaid reimbursed audio-visual telehealth for MH and SUD treatment at the same rates as in-person visits, because it considers audio-visual telehealth service to be the same service as an in-person visit. During the pandemic, Maryland Medicaid has also reimbursed audio-only visits at the same rate as an in-person visit. For private insurance, no statute establishes a statutory standard for reimbursement of telehealth services, and private carriers have continued to have discretion in telehealth reimbursement during the pandemic.

HB 551 would require payment parity across all service delivery modes – audio-only telehealth, audio-visual telehealth and in-person services – for both Medicaid and private insurance. This standard will ensure that practitioners are paid fully for the services they deliver and have the resources and financial incentive to continue to deliver or invest in both audio-only and audio-visual telehealth. The cost of care delivery for MH and SUD programs and practitioners is the same regardless of the service delivery mode: the key costs points are personnel, fixed-site buildings, telehealth and communications technologies, none of which change when a practitioner delivers an audio-only or audio-visual telehealth service. Permitting lower reimbursement rates that do not cover the full cost of delivering care via audio-only telehealth will make it impossible for MH and SUD practitioners to offer that service and will preclude them from investing in the therapeutic innovation and technology that would make service delivery most effective for their patients. **Researchers have concluded that “financial sustainability has been one of the primary barriers to expansion of telehealth services in rural areas.”**²

Payment parity is essential to ensure continuity of care post-pandemic and ensure equity for those who cannot access or afford audio-visual telehealth. As noted below, most states authorize payment parity in Medicaid, 6 of which require payment parity for audio-only as well as audio-visual on a permanent or time-limited basis in the case of Massachusetts for somatic conditions. Sixteen (16) states require payment parity in private insurance, 5 of which also include audio-only at payment parity on a permanent or time-limited basis in the case of Massachusetts.

Concerns have been raised that services delivered via audio-only telehealth may be billed inappropriately. While neither carriers nor Maryland Medicaid has offered support for that concern (and data from Optum on telehealth billing/reimbursement during the pandemic do not appear to be available), billing standards and audit practices should address these concerns. Providers are required to deliver services consistent with state regulatory standards that establish

² Sandra Benavides-Vaello, et al., Using Technology in the Delivery of Mental Health and Substance Abuse Treatment in Rural Communities: A Review, JR. BEHAVIORAL HEALTH SERV. & RESEARCH, 40:1 (Jan. 2013) 111, at 113.

the length and intensity of services, and they must deliver and document services consistent with billing codes to submit and receive reimbursement. The same service codes and standards exist regardless of the service delivery mode, and carriers and Medicaid have the same audit authority for audio-only telehealth as other service delivery modes. Finally, programs have implemented effective identification verification practices to verify patient identity for audio-only communications. **No evidence exists that payment parity for audio-only services will generate fraudulent billing.**

D. Ensure Patient Choice for Service Delivery Mode and Retain Existing Network Adequacy Standards that Require Patient Consent to Count Telehealth Services for Satisfaction of Network Adequacy Metrics.

Use of telehealth services during the pandemic has confirmed that individual patient/client choice is essential to ensure the most effective service delivery. BHA's Survey identifies among the telehealth successes that nearly half (47%) of respondents reported "individuals' [patient] satisfaction with telehealth." On the other hand, more than one in four respondents reported "discomfort using telehealth," "lack of privacy," and "difficulty of engaging clients" (both adults and children). (BHA Report at 20-21). One-third of respondents identified the reason clients are leaving treatment is client inability to use telehealth and client unwillingness to use telehealth. (BHA Report at 15). **Post-pandemic, patients and providers will choose the most effective service delivery model based on the individual's circumstances, and they – not carriers – should have full control over that choice.** HB 551 will protect a patient's right to choose their service delivery and not allow a carrier to require a member to use telehealth services in lieu of in-person care.

Patient willingness to use telehealth services is also needed to translate the promise of expanded access into reality. Telehealth expansion has improved access to MH and SUD care during the pandemic for those who reside in underserved communities with, for example, a limited number of psychiatrists or other practitioners who treat children, adolescents and patients with specific MH conditions. However, **such expansion will not amount to actual treatment if a patient does not wish to use telehealth.** For this reason, Maryland's network adequacy standards authorize carriers to use a telehealth appointment so satisfy their network adequacy obligations **only if the patient consents** to telehealth services. COMAR § 31.10.44.06(B). We believe this is the correct standard and should not be revised to allow carriers to count telehealth services without the patient's consent, as proposed by the Maryland Insurance Administration (MIA) in its network adequacy regulatory revision process.

In our view, many telehealth coverage and reimbursement issues for private insurance must be resolved in this and future legislative processes before an assessment of whether this network adequacy standard should be revised. For example, absent the adoption of audio-only coverage and payment parity on a permanent basis, the availability of telehealth services for many would be drastically reduced. Second, little public data exist on the covered health benefits for which, and the geographical areas in which, carriers would deliver telehealth. **No carrier other than CareFirst and Kaiser Permanente have reported using telehealth services to satisfy appointment wait time metrics in the 3 years preceding the pandemic, even though state law permits telehealth to be used in this way.** While carriers have certainly increased telehealth service delivery during the pandemic (at varying rates), the public has not seen data on the level of services by health condition, patient demographics, or geographical region.

A full understanding of the cause of network deficiencies for MH and SUD services is also required before removing member consent as a condition of network adequacy satisfaction. **No carrier has satisfied Maryland’s network adequacy metrics for MH and SUD service in full for any of the 3 reporting years**, and carriers have failed consistently to inform the MIA of their efforts to contract with providers, which is essential to identify the source of network deficiencies. To the extent gaps exist because of low reimbursement rates or credentialing barriers, the expansion of telehealth at a similarly low reimbursement rate will not result in increased services on the ground. **Consumers will lose important rights under Maryland law, Ins. § 15-830, to receive services from a non-network provider when the network is not sufficient, if carriers can represent that an in-network telehealth service is available, notwithstanding a patient’s discomfort or unwillingness to use telehealth care.** Thus, a full understanding of the source of network gaps is essential before a revision to the current regulatory standard that allows carriers to count telehealth services **only if** the patient consents.

Importantly, Massachusetts has considered this precise issue in the context of its telehealth expansion. The state [has adopted a provision](#) stating that Medicaid plans and commercial insurance plans “shall not meet network adequacy through significant reliance on telehealth providers and shall not be considered to have an adequate network if patients are not able to access appropriate in-person services in a timely manner upon request.” Mass. Gen. Law ch. 118E § 79(b); Mass Gen. Law ch. 175 § 47MM(b) (2020). **HB 551 would preserve the patient’s right to access appropriate in-person or telehealth services for MH and SUD treatment under the State’s current network adequacy standard.**

E. Require Private Health Plans and Medicaid to Comply with the Mental Health Parity and Addiction Equity Act.

Standards related to reimbursement, utilization management – including prior authorization requirements – and any other requirement that could limit access to telehealth services for MH and SUD benefits are subject to the Mental Health Parity and Addiction Equity Act (Parity Act). The MIA has identified violations of the Parity Act by state-regulated health plans in reimbursement rate setting and credentialing, and Maryland Medicaid regulations currently require prior authorization for MH and SUD telehealth services (COMAR § 10.09.49.09(E)(4)), while not imposing this same standard for somatic care. Telehealth standards for MH and SUD benefits must be comparable to and imposed no more stringently on MH and SUD benefits than on medical/surgical benefits. HB 551 will ensure that private plans and Medicaid assess telehealth standards for compliance with the Parity Act to prevent discriminatory coverage policies.

III. State Adoption of Audio-Only Telehealth and Payment Parity Standards

Like Maryland, many state legislatures are examining telehealth delivery standards to ensure the continuation of service delivery post-pandemic. An examination of state standards for audio-only and payment parity requirements in Medicaid and private insurance, both pre-pandemic and in response to expanded service delivery during the pandemic, (Attachment 2) reveals important trends:

- 3 states – Colorado, Massachusetts, and New Hampshire – have enacted legislation that requires coverage of audio-only telehealth and payment parity for telehealth services in both Medicaid and private insurance.

- 2 states – New York and Oregon – and the District of Columbia require coverage of audio-only telehealth and payment parity in Medicaid alone.
- 2 states – Delaware and Georgia – require coverage of audio-only telehealth and payment parity in private insurance alone, and the District of Columbia requires coverage of audio-only (and does not address payment parity).
- Most states require payment parity in Medicaid for telehealth, as defined by those states.
- 11 additional states – Arkansas, California, Hawaii, Kentucky, Minnesota, Missouri, New Jersey, New Mexico, Vermont, Virginia, and Washington – require payment parity in private insurance for telehealth, as defined by those states.

Massachusetts is unique insofar as it authorizes **payment parity for MH and SUD benefits delivery** via telehealth on a permanent basis in both Medicaid and private insurance (including audio-only) while limiting payment parity for other health care conditions to two years. **Carriers and Medicaid managed care organizations that operate in Maryland are already subject to the requirements of HB 551 in surrounding jurisdictions.**

The expansion of telehealth services is an important tool to improve access to MH and SUD care to the extent patients and providers agree that it is an appropriate service delivery mode. **We urge a favorable report on HB 551 to ensure appropriate standards for the implementation of telehealth service delivery of MH and SUD care in Maryland on a permanent basis.**

Thank you for considering our views.

**Legal Action Center: Research Literature Review of Telehealth Efficacy for
Mental Health and Substance Use Disorders
February 8, 2021**

Research to date suggests that both audio-visual and audio-only telehealth are effective for the treatment of mental health and substance use disorders when compared to in-person treatment. The following summarizes the systematic reviews of research articles, each of which discusses the strength and validity of the research evidence. More research, with standardized methodology and measures, is needed to assess the efficacy of telehealth for different types of therapy, substance use disorder treatment and some less common mental health conditions, and for racial and ethnic minority populations. More research is also needed to assess cost-effectiveness.

Both Audio-Visual and Audio-Only Telehealth

Varker et al. (2019)¹ reviewed 24 articles, published between 2005 and 2016, studying the efficacy of various types of synchronous telehealth treatment for depression, anxiety, posttraumatic stress disorder, and adjustment disorder among adults. The authors concluded that audio-only (telephone delivered) and audio-visual telehealth have the strongest bases of evidence and met the criteria for a “Supported” treatment for mental health conditions, demonstrating “clear, consistent evidence of beneficial effect” when compared to treatment as usual or in - person treatment.

Bashur et al. (2016)² reviewed 25 studies, published between 2005 and 2015 using randomized clinical trials primarily, that studied the health outcomes of different modes of telehealth service delivery for mental health and substance use disorders among children/adolescents, adults, and elderly patients. The authors concluded that telemental health is effective for treating depression and anxiety disorders, leads to improved health outcomes for patients with comorbid disorders and to increased compliance with treatment and medication adherence. Additional studies demonstrated that telemental health: (1) improves access, by making care more accessible in areas with limited or no professional mental health resources and provides a useful link for patients with special needs, including youth, minority populations, and the elderly; and (2) is efficient, insofar as it allows nonprofessional providers to play an effective role in therapy, and accessible technologies, such as telephones and internet-based applications, are effective tools in providing behavioral therapies. A small body of research concludes that telemental health “becomes increasingly more cost-effective with a larger volume of patients, more usage, and longer travel to care.”

¹ Tracey Varker et al., Efficacy of Synchronous Telepsychology Interventions for People with Anxiety, Depression, Posttraumatic Stress Disorder, and Adjustment Disorder: A Rapid Evidence Assessment, 16(4) Psychological Services 621 (2019), <https://ahcpsychologists.org/wp-content/uploads/2020/03/Efficacy-of-Synchronous-Telepsychology-Interventions-for-People-With-Anxiety-Depression-Posttraumatic-Stress-Disorder-and-Adjustment-Disorder.pdf>. (Among the 24 articles, 11 studies investigated the effectiveness of telephone-delivered interventions, 12 investigated video-teleconferencing, and 3 investigated internet text-based treatments.)

² Rashid L. Bashur et al., The Empirical Evidence for Telemedicine Interventions in Mental Disorders, 22(2) Telemedicine Journal and E-Health 87 (Feb. 2016), <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4744872/pdf/tmj.2015.0206.pdf>. (Additional studies examined the feasibility of telehealth and adherence for patients with mental health conditions, including substance use disorders.)

Audio-Visual Telehealth

Lin et al. (2019)³ reviewed 13 studies, published between 1998 and 2018, evaluating the efficacy of synchronous telehealth interventions for adult patients with substance use disorders. Studies of patients receiving telehealth treatment for alcohol use and opioid use found either greater or comparable treatment retention rates when compared to in-person treatment, and no significant difference in alcohol or opioid use treatment outcomes, when a comparison to in-person treatment was conducted.

Fletcher et al. (2018)⁴ reviewed 10 treatment outcome studies, published between 2013 and 2018, on the delivery of audio-visual mental health treatment to patients in their homes (video to home or VTH), targeting people with a range of conditions including depression, obsessive compulsive disorder, posttraumatic stress disorder, and substance use disorder. Four of 5 studies that conducted noninferiority analyses of VTH found “support for noninferiority of VTH compared to in-person treatment on primary outcomes of PTSD and depression symptoms.” Several studies found a longer duration of decreased depressive symptoms for patients receiving VTH compared to those who received in-person treatment, and one study found comparably low rates of drug use among patients receiving opioid use disorder treatment via VTH and in-person. Some, but not all, studies found evidence that VTH increases treatment adherence, and two studies in which patients elected to receive telehealth services – as opposed to being randomly assigned – found patients were significantly less likely to discontinue treatment before discharge.

Hilty et al. (2013)⁵ described articles, published between 2003 and 2013 on treatment among children/adolescents, adults and older adults, and similarly concluded that audio-visual telehealth appears to be as effective as in-person care for treating depression, posttraumatic stress disorder, substance use, and developmental disabilities. Positive outcomes included patient satisfaction, improving severity of symptoms, improving functional ability and quality of life, and treatment adherence. The studies also demonstrated that audio-visual telehealth improves access to culturally and linguistically congruent specialists, and improves access through reduced waiting time and reduced travel.

McCall et al. (2019)⁶ conducted a systematic review of studies published between 1970 and 2018 and reviewed 3 small studies examining telephone or mobile phone-optimized online interventions aimed at treating anxiety or depression among Black adults. The review found a significant reduction of depressive symptoms after the telehealth intervention in all studies. Effectiveness of the telehealth intervention compared to in-person treatment was not determined.

Audio-Only Telehealth

Brenes et al. (2011)⁷ reviewed a number of studies and meta-analyses of telephonic psychotherapy treatment, concluding that “a growing number of methodologically strong studies demonstrate positive outcomes for telephone-delivered psychotherapy.” Specifically, enough positive trials exist for researchers to conclude that telephone cognitive behavioral therapy (CBT) is an empirically supported treatment. More research is needed to compare telephone-delivered psychotherapy and in-person psychotherapy and to determine which patients would benefit the most from this mode of service delivery. These authors also raised a number of issues that might arise in the delivery of telephonic psychotherapy, such as limited control over the environment and privacy concerns, and proposed solutions.

¹ This chart cites to Medicaid statutes, regulations, manuals, or websites that explicitly require payment parity for telehealth. Federal Medicaid regulators (Centers for Medicaid and Medicare Services) view telehealth as a mode of service delivery, rather than a separate service, and do not require States “to submit a (separate) SPA [State Plan Amendment] for coverage or reimbursement of telemedicine services, if they decide to reimburse for telemedicine services the same way/amount that they pay for face-to-face services/visits/consultations.” Telemedicine, Medicaid.gov, <https://www.medicaid.gov/medicaid/benefits/telemedicine/index.html>. No such State Plan Amendments were found in this review. Therefore, it is likely that more, if not all, state Medicaid programs reimburse telehealth services at the same rate as in-person services.

² Alaska Dep’t. of Health & Social Services, Division of Public Health, Telehealth in Alaska & Telemedicine, <http://dhss.alaska.gov/dph/HealthPlanning/Pages/telehealth/default.aspx> (“A service delivered via telehealth is reimbursed at the same rate as the same service delivered in a face-to-face setting.”).

³ Ark. Code §§ 23-79-1602(a)(2) (“Notwithstanding subdivision (a)(1) of this section, this subchapter shall apply to the Arkansas Medicaid Program on and after July 1, 2016.”), 23-79-1602(d)(1) (“The combined amount of reimbursement that a health benefit plan allows for the compensation to the distant site physician and the originating site shall not be less than the total amount allowed for healthcare services provided in person.”).

⁴ Ark. Code § 23-79-1602(d)(1) (“The combined amount of reimbursement that a health benefit plan allows for the compensation to the distant site physician and the originating site shall not be less than the total amount allowed for healthcare services provided in person.”).

⁵ Cal. Dep’t. of Health Care Services, Telehealth Frequently Asked Questions (Sept. 23, 2020), <https://www.dhcs.ca.gov/provgovpart/Pages/TelehealthFAQ.aspx> (“Medi-Cal pays the same rate for professional medical services provided by telehealth as it pays for services provided in-person.”).

⁶ Cal. Ins. Code § 10123.855(a)(2) (“Services that are the same, as determined by the provider’s description of the service on the claim, shall be reimbursed at the same rate whether provided in person

or through telehealth. When negotiating a rate of reimbursement for telehealth services for which no in-person equivalent exists, a health insurer and the provider shall ensure the rate is consistent with subdivision (a) of Section 10123.137.”)

⁷ Colo. Rev. Stat. § 25.5-5-320(1), as amended by S.B. 20-212 (2020), https://leg.colorado.gov/sites/default/files/2020a_212_signed.pdf (“Telemedicine may be provided through interactive audio, interactive video, or interactive data communication, including but not limited to telephone, relay calls, interactive audiovisual modalities, and live chat, as long as the technologies are compliant with the federal “Health Insurance Portability and Accountability Act of 1996” Pub. L. 104-191, as amended.”).

⁸ Colo. Rev. Stat. § 25.5-5-320(1) – (2.5), as amended by S.B. 20-212 (2020).

⁹ Colo. Rev. Stat. § 10-16-123(4)(e), as amended by S.B. 20-212 (2020).

¹⁰ Colo. Rev. Stat. § 10-16-123(2)(b)(I) (“Subject to all terms and conditions of the health benefit plan, a carrier shall reimburse the treating participating provider or the consulting participating provider for the diagnosis, consultation, or treatment of the covered person delivered through telehealth on the same basis that the carrier is responsible for reimbursing that provider for the provision of the same service through in-person consultation or contact by that provider.”).

¹¹ Del. Health & Social Services, Division of Medicaid & Medical Assistance, Delaware Medical Assistance Program, Practitioner Provider Specific Policy Manual § 16.4.1.5 (Aug. 2019) <https://www.matrc.org/wp-content/uploads/2019/08/DE-Provider-Manual.pdf?9b3fb7&9b3fb7>.

¹² Del. Code §§ 3370(a)(4), 3571R(a)(4) (““Telehealth” means the use of information and communications technologies consisting of telephones, remote patient monitoring devices or other electronic means which support clinical health care, provider consultation, patient and professional health-related education, public health, health administration, and other services as described in regulation.”).

¹³ Del. Code §§ 3370(e), 3571R(e) (“An insurer, health service corporation, or health maintenance organization shall reimburse the treating provider or the consulting provider for the diagnosis, consultation, or treatment of the insured delivered through telemedicine services on the same basis and at least at the rate that the insurer, health service corporation, or health maintenance organization is responsible for coverage for the provision of the same service through in-person consultation or contact.”).

³² Mass. Gen. Law ch. 118E § 79(g) (2020) (“The division shall ensure that the rate of payment for in-network providers of behavioral health services delivered via interactive audio-video technology and audio-only telephone shall be no less than the rate of payment for the same behavioral health service delivered via in-person methods”); Mass. Ch. 260 of the Acts of 2020 § 68 (all other services, but only for two years), <https://malegislature.gov/Bills/191/S2984>.

³³ Mass Gen. Law ch. 175 § 47MM(a) – (b) (2020).

³⁴ Mass. Gen. Law ch. 175 § 47MM(g) (2020) (“Insurance companies organized under this chapter shall ensure that

the rate of payment for in-network providers of behavioral health services delivered via interactive audio-video technology and audio-only telephone shall be no less than the rate of payment for the same behavioral health service delivered via in-person methods”); Mass. Ch. 260 of the Acts of 2020 § 68 (all other services, but only for two years), <https://malegislature.gov/Bills/191/S2984>.

³⁵ Minn. Stat. § 256B.0624(3b)(a) (“Telemedicine services shall be paid at the full allowable rate.”).

³⁶ Minn. Stat. § 62A.672(3)(a) (“A health carrier shall reimburse the distant site licensed health care provider for covered services delivered via telemedicine on the same basis and at the same rate as the health carrier would apply to those services if the services had been delivered in person by the distant site licensed health care provider.”).

³⁷ Miss. Admin. Code tit. 23 part 225 ch. 1, Rule 1.5(B) (Aug. 1, 2020),

<https://www.sos.ms.gov/adminsearch/ACCode/00000608c.pdf> (“The Division of Medicaid reimburses all providers delivering a medically necessary telehealth service at the distant site at the current applicable Mississippi Medicaid fee-for-service rate for the service provided.”).

³⁸ Mo. Rev. Stat. § 208.670(5) (“Reimbursement for telehealth services shall be made in the same way as reimbursement for in-person contact; however, consideration shall also be made for reimbursement to the originating site.”).

³⁹ Mo. Rev. Stat. § 376.1900(4) (“A health carrier shall reimburse a health care provider for the diagnosis, consultation, or treatment of an insured or enrollee when the health care service is delivered through telehealth on the same basis that the health carrier covers the service when it is delivered in person.”).

⁴⁰ Neb. Rev. Stat. § 71-8506(2) (The reimbursement rate for a telehealth consultation shall, as a minimum, be set at the same rate as the medical assistance program rate for a comparable in-person consultation, and the rate shall not depend on the distance between the health care practitioner and the patient.”).

⁴¹ Nev. Rev. Stat. § 422.2721(1) (“The Director shall include in the State Plan for Medicaid: (a) A requirement that the State, and, to the extent applicable, any of its political subdivisions, shall pay for the nonfederal share of expenses for services provided to a person through telehealth to the same extent as though provided in person or by other means”).

⁴² N.H. RSA 167:4-d, III(e) (2020), (“The Medicaid program shall provide reimbursement for all modes of telehealth, including video and audio, audio-only, or other electronic media provided by medical providers to treat all members for all medically necessary services.”).

⁴³ N.H. RSA 167:4-d, III(b) (2020) (“The Medicaid program shall provide coverage and reimbursement for health care services provided through telemedicine on the same basis as the Medicaid program provides coverage and reimbursement for health care services provided in person.”).

⁴⁴ N.H. RSA 415-J:2, III, as amended by H.B. 1623-FN (2020),

http://gencourt.state.nh.us/bill_status/billText.aspx?sy=2020&id=1180&txtFormat=html.

⁴⁵ N.H. RSA 415-J:3, III (2020) (“An insurer offering a health plan in this state shall provide coverage and reimbursement for health care services provided through telemedicine on the same basis as the insurer provides coverage and reimbursement for health care services provided in person.”).

⁴⁶ N.J. Rev. Stat. § 30:4D-6k(a) (“The State Medicaid and NJ FamilyCare programs shall provide coverage and payment for health care services delivered to a benefits recipient through telemedicine or telehealth, on the same basis as, and at a provider reimbursement rate that does not exceed the provider reimbursement rate that is applicable, when the services are delivered through in-person contact and consultation in New Jersey.”).

⁴⁷ N.J. Rev. Stat. § 26:2S-29(a) (“A carrier that offers a health benefits plan in this State shall provide coverage and payment for health care services delivered to a covered person through telemedicine or telehealth, on the same basis as, and at a provider reimbursement rate that does not exceed the provider reimbursement rate that is applicable, when the services are delivered through in-person

contact and consultation in New Jersey.”).

⁴⁸ N.M. Admin. Code § 8.310.2.12(M)(1) (“Coverage for services rendered through telemedicine shall be determined in a manner consistent with medicaid coverage for health care services provided through in person consultation.”).

⁴⁹ N.M. Stat. Ann. § 59A-22-49.3(I) (2019) (“An insurer shall reimburse for health care services delivered via telemedicine on the same basis and at least the same rate that the insurer reimburses for comparable services delivered via in-person consultation or contact.”).

⁵⁰ N.Y. Pub. Health Art. 29-G § 2999-CC(4), as amended by S.8416 (2020), <https://legislation.nysenate.gov/pdf/bills/2019/S8416>.

⁵¹ N.Y. Pub. Health Art. 29-G § 2999-DD(1), as amended by S.8416 (2020). However, reimbursement of audio-only telehealth is contingent upon federal financial participation. *Id.*

Division of Medical Assistance, Medicaid and Health Choice Clinical Coverage Policy No. 1H, Telemedicine and Telepsychiatry 15 (Jan. 1, 2018), <https://files.nc.gov/ncdma/documents/files/1-H.pdf> (“Provider(s) shall bill their usual and customary charges: 1. When the GT modifier is appended to a code billed for professional services, the service is paid at 100% of the allowed amount of the fee schedule.”).

⁵³ Or. Admin. Rule § 410-120-1990(1)(b) (effective Jan. 1, 2021), as amended by DMAP 64-2020, available for download at <https://secure.sos.state.or.us/oard/viewSingleRule.action?ruleVrsnRsn=275177> (“Services can be synchronous (using audio and video, video only or audio-only) or asynchronous (using audio and video, audio, or text-based media) and may include transmission of data from remote monitoring devices.”).

⁵⁴ Or. Admin. Rule § 410-120-1990(6)(b) (effective Jan. 1, 2021), as amended by DMAP 64-2020 (“The Authority shall provide reimbursement for telehealth services at the same reimbursement rate as if it were provided in person.”).

⁵⁵ S.C. Department of Health and Human Services, Physicians Services Provider Manual 215 (July 1, 2020), <https://provider.scdhhs.gov/internet/pdf/manuals/Physicians/Manual.pdf> (“Reimbursement to the health professional delivering the medical service is the same as the current fee schedule amount for the service provided.”).

⁵⁶ S.D Medicaid, Billing and Policy Manual, Telemedicine Services 12 (Jan. 2021), <https://dss.sd.gov/docs/medicaid/providers/billingmanuals/Telemedicine.pdf> (“The maximum allowable amount for services provided via telemedicine is the same as services provided in-person.”).

⁵⁷ Tex. Admin. Code § 355.7001(b) – (c) (physicians, physician assistants, advanced practice registered nurses, certified nurse midwives, licensed professional counselors – including licensed marriage and family therapists – and licensed clinical social workers, licensed psychologists – including licensed psychological associates – and psychology groups, and durable medical equipment suppliers “are reimbursed for their Medicaid telehealth services in the same manner as their other professional services”).

⁵⁸ Utah Code § 26-18-13.5(3) (“The Medicaid program shall reimburse for telemedicine services at the same rate that the Medicaid program reimburses for other health care services.”).

⁵⁹ 8 Vt. Stat. Ann. § 4100k(a)(2)(A) (“A health insurance plan shall provide the same reimbursement rate for services billed using equivalent procedure codes and modifiers, subject to the terms of the health insurance plan and provider contract, regardless of whether the service was provided through an in-person visit with the health care provider or through telemedicine.”), 4100k(i)(2) (“health insurance plan” is defined to include Medicaid and any other public health care assistance program offered or administered by the State or by any subdivision or instrumentality of the State.”). This provision is effective until Jan. 1, 2026.

⁶⁰ 8 Vt. Stat. Ann. § 4100k(a)(2)(A) (“A health insurance plan shall provide the same reimbursement rate for services billed using equivalent procedure codes and modifiers, subject to the terms of the health insurance plan and provider contract, regardless of whether the service was provided through an in-person visit with the health care provider or through telemedicine.”). This provision is effective until Jan. 1,

2026.

⁶¹ Va. Code § 38.2-3418.16(D) (“An insurer, corporation, or health maintenance organization . . . shall reimburse the treating provider or the consulting provider for the diagnosis, consultation, or treatment of the insured delivered through telemedicine services on the same basis that the insurer, corporation, or health maintenance organization is responsible for coverage for the provision of the same service through face-to-face consultation or contact.”).

⁶² Rev. Code Wash. § 74.09.325(1)(b)(i) (“Except as provided in (b)(ii) of this subsection, upon initiation or renewal of a contract with the Washington state health care authority to administer a medicaid managed care plan, a managed health care system shall reimburse a provider for a health care service provided to a covered person through telemedicine at the same rate as if the health care service was provided in person by the provider.”); Washington Apple Health (Medicaid), Physician-Related Services/Health Care Professional Services Billing Guide 88 (Feb. 1, 2020), <https://www.hca.wa.gov/assets/billers-and-providers/physician-related-servs-bg-20200201.pdf> (“The payment amount for the professional service provided through telemedicine by the provider at the distant site is equal to the current fee schedule amount for the service provided.”).

⁶³ Rev. Code Wash. § 48.43.735(1)(b)(i) (2020) (“Except as provided in (b)(ii) of this subsection, for health plans issued or renewed on or after January 1, 2021, a health carrier shall reimburse a provider for a health care service provided to a covered person through telemedicine at the same rate as if the health care service was provided in person by the provider.”).

⁶⁴ Wyo. Dep’t. of Health, Division of Healthcare Financing, “CMS 1500 ICD-10” 121 (Jan. 1, 2018), https://wymedicaid.portal.conduent.com/manuals/Manual_CMS1500_1_1_18.pdf (“The same procedure codes and rates apply as for services delivered in person.”).
