## **SUPPORT**

### **HB 0008 – Labor and Employment – Family and Medical Leave Insurance Program – Establishment (Time to Care Act of 2022) House Economic Matters Committee, February 15, 2022**

Testimony of Michelle Madaio, Director – Economic Justice, HPRP

The Homeless Persons Representation Project, Inc. (HPRP) is a non-profit civil legal services organization that provides free legal representation to people who are experiencing homeless or at risk of homelessness on legal issues that will lead to an end to homelessness. HPRP regularly represents individuals and families who are experiencing food and housing insecurity in accessing public benefit programs through administrative appeals and advocacy.

**HB 0008 would increase economic stability and housing security for individuals and families living in poverty.** HPRP has worked with countless families who lost their job when they needed time off from work to care for a new child or serious medical event. These families were working in low-wage jobs, living paycheck to paycheck without adequate savings to afford unpaid leave. The jobs did not provide these families with paid leave or even the ability to take unpaid leave and hold their jobs until their return. Loss of employment caused the families to experience homelessness because without the income, they could no longer afford their rent. The paid leave program under HB 0008 would allow families to attend to their health and medical needs when ill or injured, recover from childbirth, establish infant feeding schedules and bond with a new child, without the threat of losing their wages, job, or housing.

**Maryland’s lack of a paid medical and family leave program disproportionately harms Black and Latinx workers.** Due to factors including systemic racism and wage and employment discrimination, Black and Latinx workers are less likely to be able to afford unpaid leave and have less access to paid leave when compared to white workers.<sup>1</sup> Lack of access to paid family and medical leave exacerbates existing racial disparities in wealth and health outcomes. Without a paid leave program in Maryland like HB 0008, racial disparities will continue to exist in which workers have access to paid leave.

**Paid leave programs in other states and countries are associated with positive health and economic outcomes.** Increases in paid parental leave are associated with better infant and child health.<sup>2</sup> Studies on California’s paid family leave policy suggest positive impacts on health outcomes, including self-rated health, psychological distress, decreased likelihood of obesity and asthma.<sup>3</sup>

**HPRP strongly urges the Committee to issue a favorable report on HB 0008.** If you have questions or would like additional information, please contact Michelle Madaio ([mmadaio@hprplaw.org](mailto:mmadaio@hprplaw.org)).
