

UNFAVORABLE STATEMENT

SB 154 Advanced Practice Registered Nurse Compact

Laura Bogley, JD, Director of Legislation

On behalf of the Board of Directors and members of Maryland Right to Life, I oppose this legislation as written and respectfully request your amendment or unfavorable report.

As written, **SB 154** would diminish existing professional standards of patient care by allowing advanced practice nurses to prescribe drugs as part of an interstate compact. Without specific language excluding the application of this bill to abortion, nurse specialists would be authorized to prescribe lethal chemical abortion drugs, putting more pregnant at risk for injury and death. This bill must be considered in the broader legislative context in which this new prescribing authority could be combined with dispensing authority and the commitment of public tax dollars to reimburse providers for abortion.

We strongly urge you to protect pregnant women in Maryland and other states by preserving the physician only requirement for all abortions (both surgical and chemical) and by making it clear that it is not within the scope or independence of practice of lower health care professionals to provide or perform abortion.

PHYSICIANS EXAM REQUIRED FOR PREGNANCY

One of the few protections for pregnant women in the Maryland Code is the legal requirement that only a licensed physician may perform abortions. A physician's examination is essential for the health of pregnant women, in order to properly diagnose gestational age, pre-existing medical conditions and potential pregnancy complications, including ectopic pregnancy. 26 women already have been needlessly killed by the use of chemical abortion pills and several due to the lack of a physician's examination and missed diagnosis of ectopic pregnancy.

While prescription authority may be reasonable for legitimate health care purposes, it is not appropriate for abortion. The State of Maryland must ensure that all pregnant women have access to quality health care which includes, at minimum, a complete obstetric examination by a licensed medical physician. Physician examinations are necessary to determine pregnancy, gestational age, underlying medical conditions and risks and any pregnancy complications.

By authorizing the distribution of chemical abortion pills without first requiring a full obstetric examination by a licensed physician, this Assembly will be negligent in providing for the health and safety of pregnant women in Maryland.

POSITION STATEMENT- Put Patients Before Profits

The abortion industry is asking the state to authorize them to put profits over patients.

Maryland Right to Life (MDRTL) opposes introduction or passage of any bill dealing with the 'scope of practice' of any health care professional which doesn't include language excluding abortion. Scope or independence of practice typically describes the procedures, actions, and processes that a healthcare practitioner is permitted to undertake in keeping with the terms of their professional license.

We take this position because it has long been the strategy of the pro-abortion movement to use a broad definition of that 'scope' as a means to increasing the number of lower health care professionals licensed to provide abortion services. Expanding the number of people who can provide abortion will increase the number of unborn children being killed and will put more women at risk of substandard medical care, injury and death.

The medical scarcity in abortion practice is a matter of medical ethics not provider scarcity, as 9 out of 10 ob/gyn's refuse to commit abortions because they recognize the scientific fact that a human fetus is a living human being. The abortion industry's solution is three-fold: (1) authorize lower-skilled workers and non-physicians to perform abortion, (2) authorize abortionists to remotely prescribe abortion pills across state lines, AND (3) circumvent the physician requirement by implementing telabortion through a variety of providers.

"D-I-Y" ABORTIONS

While the Supreme Court imposed legal abortion on the states in their 1973 decisions *Roe v. Wade* and *Doe v. Bolton*, the promise was that abortion would be safe, legal and rare. But in 2016 the Court's decision in *Whole Woman's Health v. Hellerstedt*, prioritized "mere access" to abortion facilities and abortion industry profitability over women's health and safety.

The abortion industry itself has referred to the use of abortion pills as "**Do-It-Yourself**" abortions, claiming that the method is safe and easy. But chemical abortions are **4 (four) times more dangerous than surgical abortions**, presenting a high risk of hemorrhaging, infection, and even death. With the widespread distribution of chemical abortion pills, the demand on Emergency Room personnel to deal with abortion complications has increased 250%.

Last session, MDRTL advised legislators that the Biden administration intended to remove Food and Drug Administration (FDA) REM safeguards that prohibited the remote sale of chemical

abortion pills and required a physician's examination in order to obtain abortion pills. Those FDA safeguards were officially removed in December 2021, leaving pregnant women and girls exposed to the predatory TELABORTION practices of the abortion industry.

Despite the fact that Maryland law permits only a licensed physician to perform abortions, the abortion industry is taking advantage of recent telemedicine policies adopted to manage Covid-19 related medical scarcity issues. Abortionists now serve only a tangential role either on paper as medical directors for clinics or as remote prescribers of abortion pills, even across state lines.

Many of the bills MDRTL opposed in 2021 involved the establishment of distribution chains for chemical abortion pills including through telehealth appointments, pharmacists, vending machines and school-based health centers. Pro-life legislators were unsuccessful in attaching pro-life amendments to these bills but still supported broad telehealth authorization and provider reimbursements.

WEAPONS OF MASS DESTRUCTION

Chemical Abortion makes up 40% of current pregnancies in the United States. With the broad application of telemedicine policies that enable "telabortion", or the remote sale and distribution of chemical abortion pills, that number is expected to increase to as much as 75%.

Chemical abortion pills are the new **Weapons of Mass Destruction** and could kill as many as 1 million preborn children each year and put their mothers at higher risk of injury and death. The proliferation of chemical abortion pills is taking abortion further outside the spectrum of "health care" as most women are prescribed these lethal pills without the benefit of a physician's examination. Pregnant women and girls are left alone to hemorrhage until their unborn child is flushed out of their system and then flushed into public sewerage.

Maryland Right to Life urges this Assembly to classify those lethal drugs typically used to kill preborn children in chemical abortions as Controlled Dangerous Substances in the Annotated Code of Maryland and to regulate their use and distribution appropriately. Lethal drugs used for the purposes of chemical abortion, currently include mifepristone, misoprostol and methotrexate, but other drugs are being used experimentally and also should be regulated. None of these lethal drugs are currently listed as either "prescription drugs" or contained in any of the Schedules of Controlled Dangerous Substances.

ABORTION COERCION

Under current Maryland law, there is no explicit measure prohibiting any individual from coercing a woman into abortion.

The *majority* of women who have had abortions (64%) report afterward that they were pressured into the decision. Coercion encompasses any situation in which a pregnant mother is made to feel – by any means – that she has *no choice* but an abortion. Coercion sends a mother into the belief that *either the baby dies or I will die or suffer great harm*.

The State of Maryland has an obligation to provide for the health and safety of pregnant women and to regulate the use and distribution of chemical abortion pills. The proliferation of chemical abortion pills through telabortion and distribution through non-physicians and lower level healthcare workers, will put pregnant women at greater risk of abuse and coercion.

Without a physician’s examination to confirm medical eligibility for chemical abortion as well as to confirm that the pregnant woman has consented to chemical abortion, these pills can be distributed to and utilized by sexual abusers and **sex traffickers** to continue to victimize women and girls.

BACKGROUND- Commoditizing Abortion

In the early twentieth century, Margaret Sanger founded the American Birth Control League that was later called the Planned Parenthood Federation of America. Sanger was a racist and a eugenicist who believed that birth control and forced sterilization would help to curb the growth of “unfit” populations, particularly African Americans and established her clinic in Harlem, a primarily African-American borough of New York. Sanger, who later served as president of the International Planned Parenthood Federation, was instrumental in legalizing contraception in the United States.

In the late 1960s and early 1970s, underground abortionists wanted to legitimize their abortion practices as “mainstream medical care”. Adopting the eugenics philosophy of Margaret Sanger, they realized that while middle and upper class women could afford contraceptive care, abortion could be marketed to poor and minority women as an affordable birth control option. By classifying abortion as “health care”, abortionists would be able to recover payment for their services and be incentivized to “sell” more abortions.

Abortionist Dr. Bernard Nathanson, co-founded the National Abortion Rights Action League, to lobby for the legalization of abortion. Abortion advocates assured judges, legislators, and the American public that legalizing abortion would be beneficial to the health and well-being of

American women. Proponents argued, if abortion were legal, the procedure would be safer for women because it would become an accepted part of “mainstream medical care,” proper surgical procedures would be followed, and skilled and reputable gynecologists and surgeons would perform the procedure.

Dr. Nathanson, who later converted to being a pro-life advocate, admitted that he had taken part in fabricating the number of women who died from illegal “back alley” abortions prior to 1993. What he reported to the Supreme Court and others as tens of thousands of deaths, was in reality only 100 women in 1972. Another 100 women were killed in 1972 as the result of legal abortions, in the few states that authorized exceptions to their abortion prohibitions.

In December 1996, the National Abortion Federation (NAF), with funding from the Kaiser Family Foundation, convened a national symposium to explore how CNMs, NPs, and PAs could participate more fully in abortion service delivery nationwide. In 1997 they presented a symposium entitled, “The role of physician assistants, nurse practitioners, and nurse–midwives in providing abortions: strategies for expanding abortion access.” (National symposium, Atlanta, GA, 13-14 December 1996. Washington, DC: National Abortion Federation; 1997).

There is even a ‘tool kit’ entitled “Providing Abortion Care: A Professional Tool Kit for Nurse-Midwives, Nurse Practitioners and Physician Assistants” (2009). It was developed as a guide for health care professionals who want to include abortion as being within their scope of practice.

This session the Maryland Legislative Agenda for Women states that their goal in part is to expand access to abortion by authorizing “advanced practice clinicians” including nurse practitioners, certified nurse midwives, nurse midwives and physicians assistants to provide abortion, and to ensure those abortions are covered by health insurance, especially for minority women through taxpayer funded Medical Assistance.

In recent years, MDRTL has opposed several bills attempting to expand the scope of practice of doulas, certified nurse midwives, and even pharmacists, that was broad enough to include participation in abortion (either surgical or chemical) and authorization for reimbursement through the Maryland Medical Assistance Program (Medicaid). These bills would divert public funds away from other legitimate health care services of these practice areas.

STATE OF PREGNANCY CARE IN 2022

The practice of abortion in America has become the “**red light district**” of medicine, populated by dangerous, substandard providers. With the proliferation of chemical abortion pills, the abortion industry itself has exposed women to “back alley” style abortions, where they bleed alone without medical supervision or assistance.

Legalizing abortion has failed to eliminate substandard medical care, kept people without medical licenses from performing abortions, ended the use of dirty, unsanitary procedure rooms and unsterile, inadequate instrumentation, ensured competent post-abortive care, or prevented women from dying from unsafe abortions.

More importantly, legalizing abortion has failed to provide for the legitimate reproductive health care needs of women. Abortion blood money is fueling political campaigns and dictating the prioritization of public funding for abortion, diverting funds from legitimate reproductive health care including reliable birth control methods, quality prenatal care, parenting education and support, foster care reform and affordable adoption programs.

The state has failed to analyze and report data examining the connection between abortion and maternal health and mortality, including subsequent preterm births, miscarriages and infertility. The state participates in normalizing abortion, ignoring the mental health needs of large numbers of women and girls suffering from Post-Abortion Syndrome including severe depression and anxiety.

CONCLUSION

Women in Maryland deserve better than more of the same abortion politics. State lawmakers must take immediate action to confront and remedy the abortion industry's dangerous practices and the rejection of medically appropriate health and safety standards of patient care.

For these reasons, Maryland Right to Life urges your amendment to exclude abortion purposes, including the prescription and distribution of chemical abortion drugs from the application of this bill. If you cannot guarantee that this bill will not expand abortion access, we ask you to reject the bill as a whole.
