Dear Members of the House Health and Government Operations Committee:

Please accept this as my official request to support HB 0779.

While I absolutely oppose creating any type of vaccine passport of any kind – private or public - as it creates a second-class tier of citizen and is unethical and discriminatory, if these did come to pass, natural immunity should be included, as immunity that has been acquired by infection has been shown to be better and longer lasting than vaccine-induced immunity alone.
