Health - Protection of Personal Medical Information

Jennifer Rauhofer

I am writing to support this bill that establishes the right for every Marylander to confidentiality and privacy concerning their personal medical information. Medical confidentiality and privacy has been a protected right long before COVID and one virus that has proven over time to be less dangerous should not open the door for medical discrimination. This policy is scientifically and ethically in line with our current understanding of the data. I want to protect my rights and the rights of my family and employees to medical privacy.
