

HB799 FAVORABLE

I request the committee give this bill a favorable report.

- There is no scientific justification for mandating Covid-19 vaccines in any workplace. [No Covid-19 vaccine currently available effectively prevents infection or transmission](#); therefore there is no public health justification for mandating Covid-19 vaccination
- There is [increasing scientific evidence](#) that prior infection and recovery from Covid-19 confers robust, lasting protection against both infection and disease which is more effective than vaccine protection against disease
- There is ample [evidence of risks](#) associated with Covid-19 vaccines, as [acknowledged by the CDC](#), to warrant accommodating patrons with the option to test for Covid-19
