

HB1189

Favorable

I support bill 1189. Any experimental or emergency use product or treatment, any new or emergency use vaccine should be monitored with required extra diligence. Every adverse event should be reported to confirm with absolute confidence it's safety. We should be taking nothing for granted and watching and reporting every adverse event. Since these products have not undergone their due scientific diligence, they need be monitored with extreme care.

Sincerely,

Kathy Talbott
