Sexualized Media and Kids Research Results

**Compiled by
Mary Anne Layden, Ph D
Director
Sexual Trauma and Psychopathology Program
Center for Cognitive Therapy
University of Pennsylvania**

Young people (<18 years old) who have been exposed to sexualized media (both pornography and sexualized TV) have an increased likelihood of:

1. Having intentions to engage in sexual intercourse
2. Having earlier initiation of sex
3. Having sexual activity more frequently
4. Having more sex partners
5. Having multiple lifetime sexual partners
6. Having had more than one sexual partner in the last 3 months
7. Having engaged in oral sex
8. Having engaged in anal sex
9. Having engaged in sexual intercourse
10. Having a strong desire to conceive
11. Becoming pregnant
12. Testing positive for chlamydia
13. Having negative attitudes toward using condoms
14. Having not used contraception during the last intercourse
15. Having not used contraception in the past 6 months
16. Having used alcohol or other substances at last sexual encounter
17. Having higher sexual permissiveness scores
18. Having less progressive gender role attitudes
19. Being more likely to see women as sex objects
20. Being more accepting of sexual harassment
21. Engaging in more sexual harassment perpetration
22. Engaging in forced sex
23. Being a juvenile sex offender
