

Testimony Supporting [HB718](#)  
Economic Matters Committee  
March 9th, 2023

**Position: SUPPORT**

Dear [Delegate C. T. Wilson](#) and Members of the Committee,

The South Baltimore Community Land Trust (SBCLT), based in Baltimore, is writing to share the comments from hundreds of residents expressing strong support of HB718, the Reclaim Renewable Energy Act, as a critical piece in a systematic approach to climate change and advancing a just transition to Zero Waste that must:

**REDIRECT SUBSIDIES** for the incinerators, landfills and dirty energy we are transitioning away from

**BUILD AND STRENGTHEN LOCAL END MARKETS** for compost, recycled commodities and truly renewable energy.

**STRONGER STANDARDS** that protect our health, worker safety and our shared environment, including a Cumulative Impacts law that takes into account the pollution sources a community already has when considering new polluting developments.

**HEALTH AND DEVELOPMENT FUNDING** to mitigate the costs of hosting toxic waste infrastructure for decades --- paired with a “Just Transition for Zero Waste and green infrastructure Fund” to develop new community-owned compost, recycling, deconstruction, reuse and green infrastructure to end reliance on toxic waste and energy infrastructure.

**PROTECTIONS** for sanitation and other workers as we transition from outdated technologies to current approaches

This bill will make sure that our subsidies for renewable energy through the Renewable Portfolio Standard are going toward actual renewable energy, not being wasted on things that emit greenhouse gasses and add even more health burdens to environmental justice communities. We are in a climate crisis, and we cannot afford to be spending our renewable energy money on

facilities that pollute. Now is the time to double down on Maryland’s commitment to truly renewable energy and subsidize only facilities that are emissions-free.

This bill will eliminate three types of energy from Maryland’s RPS: trash incineration, woody biomass, and factory farm methane gas. All three of these pollute the environment, harm nearby communities’ health, and contribute to climate change. Subsidizing them takes money away from the real renewable energy that we need, and it also tilts waste markets toward the worst methods of managing our waste. Subsidies exist to support the things we want, so why are we subsidizing things we don’t want in our communities? Let’s put those subsidies toward wind and solar power, and let the waste sector work on managing waste.

Please pass the Reclaim Renewable Energy Act so that those funds can support new wind and solar power instead while also assisting us in the transition to Zero Waste we so urgently need.

Please see the comments below from hundreds of residents from across the state of Maryland calling for urgent action in support of cleaning up the RPS as part of a comprehensive approach to addressing climate change and advancing a just transition to Zero Waste:

<b>FIRST</b>	<b>LAST</b>	<b>ADDRESS</b>	<b>COMMENT ON WHY ENDING SUBSIDIES FOR DIRTY ENERGY IS CRITICAL AS PART OF A SYSTEMATIC APPROACH TO CLIMATE CHANGE AND ZERO WASTE SOLUTIONS</b>

			<p><i>I live within a mile of the incinerator. My lungs know when the filtration system isn't working properly. Especially on those still muggy summer days when the whole atmosphere oozes an aroma like rancid iron. Baltimoreans wrack up 55 million dollars in excess emergency asthma treatment because of this incinerator. I'm an asthmatic myself. I suppose 55 million dollars adds to the GDP. But being able to breathe a steady stream of fresh air would more than make up for that in greater productivity and job opportunities for city farming. I'd like to see Bresco gone before I die.</i></p> <p><i>Sincerely</i> <i>Kimberly Sheridan</i></p>

			<i>It matters because we need to be able to pour back into our communities while also holding what we owe to each other as a city. Curtis Bay, and many other areas, already see the negative health effects which incinerating trash carries — higher asthma rates; more generalized breathing issues, like poor air quality for elders. Why not create healthier soil and waste management for Baltimore communities while limiting the pollution that comes with food waste in trash streams? Also — if I can be so frank — what it currently marketed as compost by DPW and the Department of Planning goes to the county, not Baltimore. What is currently being done isn't supporting us, even though it's marketed by an attempt to start compost streams. Do better.</i>
