FAVORABLE HB1161
March 10, 2023

My name is Jill Kapper and I appreciate you allowing me to testify to support HB1161. I am testifying today to support HB1161 because our children depend on it. We all deserve informed consent while being treated by a trusted health professional. HB1161 would require healthcare providers to provide complete and accurate information on the risks and benefits of HPV vaccination before administering the vaccine to patients.

I'm thankful that I never finished this series for my daughter and I certainly won't be starting it for my other. I'm ashamed that I didn't realize that it clears up 90% of the time on its own. I was one of the many who were deceived into taking this vaccine and I guess I'm what we'd call a vaccine failure.

The only people that I notice stressing the importance of this vaccine are those benefiting from it financially. Everyone has a PR campaign for their product but Pharma gets away with false advertising in its HPV vaccine campaign. They have no liability for the fallout from their false advertising. Remember Vioxx and how Merck knew it would cause heart attacks. After thousands of deaths, they took it off the market. But at least victims were able to sue for VIOXX **drug** injuries and deaths. You can't sue Pharma for childhood **vaccine** deaths and injuries.

Once again I urge you to support HB1161 and thank you for listening.
