

HB 535

I oppose HB 535.

Election Integrity is deeply distrusted. HB 535 leaves Maryland open to nefarious actors abusing our weaknesses which are already being attacked. Moving curing of ballots from local precincts and boards of elections ensures that MORE doubt will be cast upon elections.

From a Board of Elections perspective the 2022 turnout statistics were very disappointing. Even with all the accommodations of extended voting days and hours and a massive push for mail in voting, **turnout was 16.6% lower than the 2018 Gubernatorial election. Clearly these accommodations are not inspiring more Marylanders to make their voice heard via voting! In my opinion a lack of trust in the voting system is a significant factor driving these results.**

I submitted the data listed Below are the high level statewide and Anne Arundel county statistics.

Two points,

- 1) Republican turnout decreased the least (both statewide and county) and**
- 2) even with overwhelming mail-in ballot use by Democrats, total Republican turnout exceeded Democrat turnout by several points. Further demonstrating the bi-partisan distrust of our electoral system.**

After statewide canvassing the election system as it now stands is being infiltrated by ballot harvesting on a mass scale.

I was part of a group of concerned citizens who identified numerous apparent anomalies after

1) analyzing data from the 2020 General and the 2022 Primary elections and

2) canvassing 2020 General election voters in Crofton, Pasadena, and Severna Park in

August 2022.

Turnout	2018	2022	% Chg
Statewide			
Total	59.06%	49.26%	-16.59%
DEM	61.53%	50.81%	-17.42%
REP	63.45%	57.60%	-9.22%
UNF	46.41%	36.64%	-21.05%

AA County

Total	60.10%	53.69%	-10.67%
DEM	63.80%	56.52%	-11.41%
REP	63.63%	59.58%	-6.36%

UNF 47.83% 41.80% -12.61%

This low voter confidence played out in the 2023 General election.

Due to growing non-partisan distrust in our election system, the identification of numerous apparent voting anomalies in the State of Maryland, and the documented issues pertaining to voting nationwide^{1,2}, Over 60% of all Americans have lost Faith in our Elections.

Polls continue to show that low voter confidence is non-partisan and it is not getting any better. Waiting for and instructing citizens to “get over it” will most likely never happen. To compound very low confidence, we are hearing more voters state they are not going to vote because they believe their vote doesn’t matter. In fact, recent Rasmussen polls³ show the severity of the issue:

- Widespread Cheating will affect Nov 2022 Election (7/7/2022) – 50% believe
- Election Integrity (8/8/2022) – 80% Concerned, 59% Very Concerned
- Election Cheating (8/22/2022) – 75% Concerned, 60% Very Concerned

I was part of a group of concerned citizens who identified numerous apparent anomalies.

A subset of the anomalies identified is included below:

- There are 1,242 recorded 2020 General election votes in Anne Arundel County for voters who have moved according to the U.S. Post Office National Change of Address (NCOA) database. 11,889 in the State
- There are 8,077 voters labeled as inactive after they voted in the 2020 General Election⁴. 73,949 in the State
- There are 520 addresses who have voters with the same date of birth and same address who voted in the 2020 General Election⁵. 5,313 in the state. Twins/Triplets that still live together?
- The number of 2022 Primary voters reported by the Secretary of State⁶ (AA: 90,413 / State: 966,228) do not match the number of 2022 Primary voters identified in the Maryland State Board of Elections Voter rolls⁷ (AA: 91,242 / State: 1,033,425)
