

HB1438 – UNFAVORABLE UNCONSTITUTIONAL

Nelda Fink, MD District 32

The preamble of this bill makes some grave presumptions that are not supported by any real scientific or observable methods. The first presumption is that we are experiencing climate change. Since our records only go back 200 years it is hard to prove that this is NOT a naturally occurring event that will also reverse naturally on its own as well. It then goes on to unfairly and unjustly put the liability of the first false presumption on the fossil fuel industry and then to unjustly tax the blamed industry for an assumed liability based on a false premise.

The unjust and unfair taxes of course will be passed onto the consumer who, in case you haven't noticed lately, are your constituents, the residents of this state. This bill turns out to be yet another **infringement of rights by creating an excessive burden for people** who want the pleasure of a free market and to purchase fossil fuels if they so desire. McCollugh V Maryland established that "the power to tax [or make excessively expensive] is the power to control."

Unjust taxation and unfair market manipulation is **a deprivation of rights of the individual making this UNCONSTITUTIONAL!**

On top of that, I believe there is more science to show and support that **YOU** are causing the climate change. Yes **YOU the legislators!** Let's put the liability on the true root cause of the problem!

The weather modification program that you legislated and support must not be working very well as it appears to be causing a great deal of unnatural flooding, storms and deterioration of the sea walls, *"including rising sea levels, increasing temperatures, extreme weather events, 21 flooding, heat waves, toxic algae blooms, and other threat"* quoting from your bill verbiage. It doesn't take a rocket scientist to know that metallic layers will heat with exposure to the sun's rays on it. This is what backpackers and survivalists use to keep warm. All the aluminum and other metals in the air from the weather modification program will absolutely heat up the air and surface below. So let's solve the real problem. Stop spending my tax dollars on the destructive weather modification program and then you will have money to restore all the damage done from it!

This bill is totally unjustified and totally UNCONSTITUTIONAL!

100% OPPOSE this bill and pray to my God who is also Nature's God that nature and free markets can be restored to this earth and that this bill receive an unfavorable report.

Thank you.

Nelda Fink
