

3/5/2024

Good Afternoon chairmen and members of the committee, My name is Lia Yunga and I'm a fourth grader I'm here to tell you about SB980, I think that SB980 is great because it is making science on mobile fun for kids like me! And I'm currently doing coding classes at exi.stem and it's going great! there is a lot of ideas like nothing I've known, My mind has opened from all the coding I had done for the past 2 years, and I have noticed little changes, like me pairing how I started in the beginning and to now I have grown and grown to now know that coding can be difficult in the start but then you notice to change it's not hard for you anymore and that shows that coding isn't always easy I take time.

And I would like other kids like me to do the same thing and that's why I would like your help for little kids and older kids than me to have the courage to do science on mobile apps and that's why I gave this little speech

And thanks for your
Attention, U"
