

THE TESTIMONY in FAVOR of HB 1374

Given March 6, 2024

My name is Ikenna Enurah and I have lived in the White Marsh Honeygo Ridge community for about 20 years. I have a master's degree in environmental science from Towson University. I know for a fact that crematoriums are sources of air pollution including mercury emission. This pollution can cause subtle chronic health effects due to long-term low dose exposure. Mercury pollution is drastically increased in crematories that burn corpses with amalgam dental fillings. In humans' mercury damages the nervous system and can harm childhood development. That is why I am in strong support of Resolution HB 1374.

Thank you,

Ikenna Enurah
