

Joint Letter House Bill 374 & Senate Bill 186 (PG 303-24)

Senate Finance Committee

February 23, 2024

Opposition

Chair Beidle, Vice-Chair Klausmeier and Members of the Committee:

Thank you for the opportunity to provide comments on House Bill 374 and Senate Bill 186 (PG 303-24) Prince George's County-Alcoholic Beverages-Cigar Lounge License sponsored by the Prince George's Delegation and Senator Watson. The American Lung Association, American Heart Association, Campaign for Tobacco-Free Kids, American Cancer Society Cancer Action Network, and Maryland-DC Society of Addiction Medicine **strongly oppose** this bill as it would provide an exemption to Maryland's smoke-free law.

As written, the proposed legislation significantly undermines the strong smoke-free workplace protections currently in place in Maryland. The proposed legislation allows for the establishment of Cigar Lounges which can also sell beer, wine, and liquor in Prince George's. This change would expand businesses that are exempt from the smoke-free law and allow indoor smoking.

This insertion of the ability to apply for both an alcohol and cigar license creates a significant loophole in indoor smoking protections and could allow more places within Prince George's and in turn Maryland to permit smoking that previously did not. If passed the legislation would make it easier to exempt establishments in not only Prince George's but in other parts of the Maryland from the smoke-free law which weakens decades of progress in preventing exposure to secondhand smoke.

Research has clearly demonstrated that there is no safe level of exposure to toxic secondhand smoke.¹ While ventilation or air purification systems are sometimes promoted as a way to reduce exposure to secondhand smoke, ventilation cannot remove all secondhand smoke and does not purify the air at rates fast enough to protect people from harmful toxins. The U.S. Surgeon General has concluded that even separating smokers from nonsmokers, cleaning the air, and ventilating buildings cannot eliminate exposure of nonsmokers to secondhand smoke. The only effective way to fully protect nonsmokers from exposure to secondhand smoke is to completely eliminate smoking in indoor public spaces.²

Secondhand smoke is also an occupational hazard for many workers. Job related exposure to secondhand smoke is a significant, but entirely preventable, cause of premature death among U.S. workers. The National Institute of Occupational Health and Safety (NIOSH) and the US Surgeon General found that occupational exposure to secondhand smoke increases workers' risk of lung cancer and other diseases. Patrons were also found to have significantly elevated levels of a tobacco-specific lung carcinogen after a four-hour visit to a casino that allowed smoking.^{3 4} The American Society of Heating, Refrigerating and Air-Conditioning Engineers states that the only way to eliminate indoor exposure to environmental tobacco smoke is to eliminate all indoor smoking activity.

The American Lung Association, American Heart Association, Campaign for Tobacco-Free Kids, American Cancer Society Cancer Action Network, and the Maryland-DC Society of Addiction Medicine thank Maryland lawmakers for their continued commitment to the health and wellbeing of the residents of Maryland and the desire to protect Marylanders from exposure to secondhand smoke. The American Lung Association, American Heart Association, Campaign for Tobacco-Free Kids, American Cancer Society Cancer Action Network, and the Maryland-DC Society for Addiction Medicine **strongly oppose** the legislation before you, House Bill 374 and Senate Bill 186 (PG 303-24) and would encourage members of the committee to vote no on these bills and protect Maryland's strong smokefree laws. If you have additional questions, please don't hesitate to contact any of us.

Sincerely,

Aleks Casper
