

# Favorable with Amendment HB 1259

Thank you for the effort to increase options for health care screening.

Although FDA has cleared thermography as an adjunctive to mammography tool for cancer screening, no coverage is currently available. However, there are multiple benefits to thermography, not least of which is it being the least risky procedure out of all currently available. It is even safe for pregnant and nursing women.

<https://www.medicalnewstoday.com/articles/316632#thermography>

Please amend the bill to include the coverage for thermography.

Sincerely,  
Mark Meyerovich
