Testimony in support of HB0722

To the Committee Members:

Please accept my testimony in support of HB0722. Parents know their children better than anyone and have a greater interest in the health and welfare of the child than anyone. I support the requirement that Parents consent to the medical procedures described in this legislation that could potentially be performed on their minor child. In the small minority of situations where there is a guardian or custodian I believe that the potentially irreversible procedures addressed in this legislation should also require the consent of the guardian or custodian.

Thank you,

Brian Finglass
