

Bill 997 Model professional development facilities for green schools

- This bill requires MAEOE with partners to develop criteria for Model Green Schools.
- The criteria and the opportunity to become a model green school will provide schools with an understanding of what is a model school.
- Model green schools can be used to train teachers, principals, and staff to make adjustments to plans, see examples of best practices, and learn how to deliver lessons aligned to elit standards.
- By adding a question to the green schools application “would you be interested in becoming a Maryland green school,” MAEOE will know who is interested in showcasing their greening and sustainable achievements to help others succeed.
