Date: February 25, 2025
To: Members of the Senate Committee on Education, Energy, and the Environment
From: Grayson Middleton, Government Affairs Manager
Re: SB0806 – Prohibiting Confinement of Egg-Laying Hens – **Oppose**

Delmarva Chicken Association (DCA) the 1,600-member trade association representing the meat-chicken growers, processing companies, and allied business members on the Eastern Shore of Maryland, the Eastern Shore of Virginia, and Delaware opposes SB 806 and urges an unfavorable committee report.

SB 806 would prohibit the widespread and standard industry use of battery cages in egg-laying operations.

To be clear, the Delmarva Chicken Association represents the broiler (meat) chicken industry alone and does not normally advocate on behalf of other poultry or egg-layers. However, we do represent allied business members who supply and serve egg-laying operations as well as the broiler industry. In addition, as an agricultural association, we advocate for policies that are beneficial to Maryland agriculture as a whole and oppose those that would be detrimental.

Except for purposes of transportation, our chickens have never been, and will never be in cages. However, this is what logistically works best for our industry. As you will hear from others, their needs are different from ours. However, as an agricultural association, we take exception to any policies that are not economically sound nor based on scientifically proven research. Some estimates show that implementing these rules could raise production costs by 40% and would require a 119% increase in labor.¹ Legislation that harms a farmer's well-being and runs contrary to fine-tuned, widespread, and generally accepted agricultural practices sets a dangerous precedent for the entire agricultural economy and community.

This legislation is also detrimental to both the livestock and the consumer. Analyses have shown that implementing this law could cause as much as a 35% reduction in egg supply, and a 22% increase in the retail price of eggs.² This is compounded by the persistently inflated price of eggs in the United States. Furthermore, studies from the European Union (where cage-free is now mandated) have demonstrated significantly higher rates of infectious diseases among poultry.³ This is particularly concerning for our industry, as High Path Avian Influenza remains the most significant threat to our economic well-being and animal welfare.

Again, while we do not use cages in the broiler industry, we think it is very concerning when legislation is considered which gives more credence to objective beliefs about what is best for the animal than it does sound science and economic viability.

Educate. Advocate. Innovate.

For these reasons, we urge an **unfavorable** vote on SB 806.
