

Dear Senators,

I am writing to ask you to support SB952. There are many grid enhancing technologies that make the construction of new transmission lines along greenfield routes unnecessary. Given the rapid advancements in grid enhancing technologies, and the social, environmental, and ecological destruction that comes with greenfield transmission routes, I ask that you please direct the Public Service Commission to mandate the use of grid enhancing technologies prior to issuing a CPCN for any construction of new greenfield transmission routes.

Thank you for your time and consideration.

Sincerely,

Suzannah Moran
