Re: SB0270 – PSC - Full Costs and Benefits Analysis of Sources of Electricity Generation – **Support**

Delmarva Chicken Association (DCA) is the trade association representing the meat-chicken growers, companies, and allied business members on the Eastern Shore of Maryland, Delaware, and the Eastern Shore of Virginia. Collectively, we contribute more than \$5.4 billion to Maryland’s economy and pay more than \$254 million in state and local taxes. We strongly support SB 270 and urge a favorable committee report.

SB 270 would require the Public Service Commission to analyze the full costs and benefits of sources of electricity in the State of Maryland. It also requires the commission to include recommended policy changes to support the development of energy sources with the lowest costs and greatest benefits to ratepayers of the State.

Rising electricity costs in Maryland have affected every citizen. However, these higher rates have been particularly damaging for chicken farmers, who already count electricity as their highest input cost. Farmers on Delmarva have seen a 6% average annual increase in their rates, and these have consistently been 7% higher than the national average for commercial customers. Compounded by weather events, HPAI, unfavorable markets, and government regulation, these costs have put an enormous amount of pressure on our farmers. We believe the State should make every effort to investigate avenues to reduce electric costs for our producers, and as such, we urge a **favorable** report.
