

FAVORABLE SB15 .pdf

Uploaded by: Amy Adams

Position: FAV

February 16, 2026

Dear Education, Energy, and the Environment Committee members,

The Baltimore County Parent and Student Coalition (BCPASC), a nonpartisan group of 5,000 residents, advocates prioritizing students in Baltimore County Public Schools.

We are writing to you today in strong SUPPORT of SB15 Baltimore County - Inspector General - Authority Over Baltimore County Public Schools.

As you are aware, Baltimore County Public Schools (BCPS), along with Baltimore County and the State of Maryland, are currently operating within a fiscally constrained environment. Superintendent Dr. Rogers' Proposed FY27 Operating Budget demonstrates a commitment to upholding the three-year agreement with bargaining units, resulting in over 80% of the operating budget being dedicated to salaries and wages. Consequently, less than 20% of the budget remains available for cost savings initiatives.

Proposed cost-cutting measures include increasing average class sizes for grades 1-12, eliminating 594 positions, and reducing expenses related to IT, transportation, facilities management, and instructional materials. As of the official student count on September 30, 2025, BCPS has 2,000 fewer students than before and is now below its 2013 enrollment numbers. If the governor does not approve another year of hold harmless, this drop in enrollment could result in a \$14 million budget shortfall.

This detailed explanation is intended to illustrate how granting the Inspector General of Baltimore County oversight authority over BCPS may provide financial benefits to the system. By acting upon tips and initiating inquiries to investigate and identify evidence of fraud, waste, or misuse of taxpayer resources, this oversight can help address factors that undermine both the integrity of the system and the welfare of its students.

Interestingly, in addition to our support, this enabling legislation was publicly supported and listed as one of the legislative priorities of the Teachers Association of Baltimore County (TABCO), supported by the League of Woman Voters Baltimore County and supported by 6 of the 7 County Council members.

The objective of this bill is not to reduce public funding for BCPS, but rather to help safeguard against occurrences of fraud, waste, or abuse—especially critical during periods

of fiscal constraint. BCPASC appreciates its collaborative relationship with Ms. Madigan’s office and Mr. Henry, the Maryland Inspector General of Education. We recognize the nuanced distinctions between audits and investigations, internal and external assessments, and value the importance of transparency through direct public reporting.

BCPS currently has a Department of Internal Audit, but it is important to understand the distinction between internal auditors and inspector generals.

Auditors	Inspector General
Utilize Government Auditing Standards, also referred to as generally accepted government auditing standards (GAGAS) or the Yellow Book.	Utilize Principles and Standards for Offices of Inspector General (Green Book).
Professionals within an organization who publish reports to the organization leadership offering insights and recommendations to enhance efficiency and mitigate risk.	Independent officials within government agency or organization who publish reports to the public.
Focus on evaluating and improving an organization's internal controls and processes and risk management	Tasked with conducting audits, investigations, and inspections focusing on ensuring legal compliance of programs and operations and investigate to prevent fraud, misconduct, and abuse

BCPS conducts limited internal audits to ensure compliance with policies but does not perform comprehensive or forensic reviews. At the latest audit committee meeting, staff confirmed their focus is on materiality rather than examining every transaction.

A recent audit found that of 95 investigations, 43 cases of misconduct were substantiated—the highest in three years. Thirty-four cases from the past school year were inconclusive, unsubstantiated, or unreported; 18 remain pending. Full audit reports and investigation details are not publicly released.

At the last audit committee meeting, a contracts audit was presented revealing substantial findings within a small sample that included: [BCPS Contracts Audit February 2026](#)

1. Spending without fully executed contracts
2. Invoice rates not matching contract terms
3. Vendor performance evaluations not done regularly

4. Incomplete corrective action follow-up and overpayment due to inaccurate billing
5. Unallowable charges and unprovided contracted services

To underscore why expanding the Inspector General of Baltimore County office to include BCPS is important, we want to point out that Internal Auditors and Inspectors General differ in three main ways.

1. Independence-IG operates independently from the agencies they oversee while auditors are typically employees of the organization they audit
2. Scope of work-IG focuses on compliance and fraud prevention whereas auditors concentrate on internal controls and operational efficiencies
3. Reporting-IG files public reports, auditors report to management. They operate from 2 separate manuals and have different certifications.

Thank you for your consideration and support of SB15 and the students of Baltimore County Public Schools.

Sincerely,
Amy Adams, President BCPASC

SB 15

Written Testimony in Support of Senate Bill 15

Barbara Dezmon, Ph.D.

This testimony is in support of Senate Bill 15. I served in Baltimore County Public Schools for over 35 years, beginning as a teacher. During my tenure I served in elevated roles in central office, including executive assistant to the Deputy Superintendent and Assistant to the Superintendent for Equity and Assurance to Superintendent Joseph Hairston. When I retired, I was tasked with beginning to lead reform efforts in curriculum and instruction. Those roles provided me with access to numerous offices and schools and enabled me to observe practices throughout the central office and schools.

First, I refer to Exhibit 1, which details the role and responsibilities of the Maryland Inspector General regarding education. As the document shows, the purpose is not to govern the Board of Education; rather, it is to ensure accountability for the use of funds as well as operational aspects of the system. Moreover, the Inspector General office provides recourse to which faculty, staff, and citizens turn in case of fraud, waste, and abuse as well as investigations related “operational and administrative” complaints. In addition to other agencies and duties, the Maryland Inspector General has oversight of twenty-four school districts.

Recognizing the extraordinary school district funding request exceeding half the county budget as well as the necessity for an independent office with oversight of the schools, the Baltimore County Council, in direct response to the citizens of Baltimore County, passed a resolution to expand duties in the county Inspector General office to include education. (See Exhibit 2.) Being local will provide an opportunity to increase access, immediate response, and focus on complaints and concerns. In his testimony, The State Inspector General even mentioned the advantages of having a local position with that authority. Further, although, in ideal circumstances, all complaints could be addressed at the state level, often complaints never take that route, due to ignorance or fear of retaliation. This is not duplication of services; it is enhancement for effectiveness and productivity.

Below are actual circumstances that have existed and could be addressed by an Inspector General:

- A. Curriculum Audit of entire system offices and schools by Phi Delta Kappa exposed instances of mismanagement and inefficiency. Reforms never completed.
- B. Funds budgeted for schools and teachers and students withdrawn for central office purposes.
- C. Parents of special education students not being provided with detailed or given general information regarding children condition.
- D. Unnecessary staff retained, while others released.
- E. Retaliation against faculty members and staff who complained or offended.

- F. Curricula materials destroyed and abandoned and replaced with instructional programs that cost millions, yet as test scores show, not effective.
- G. Inappropriate use of credit cards.
- H. Office budget requests aimed not to arouse concern.
- I. Theft.
- J. Revising reports and data to cover unsuccessful programs that cost up to millions. Over years, most of students enrolled in Language! were African American and poor. See Exhibits 3 and 4 for actual real and doctored reports given to Board of Education on Language! Program.
- K. Conference trips arranged so that family members can meet for vacation.
- L. Digitized curriculum/instructional programs and stored curriculum destroyed or abandoned to replace with programs that cost millions.
- M. Grade enhancement – such as 50% rule.
- N. Grade reconfiguring to passing.
- O. Exorbitant funds spent on office furniture while schools in need.
- P. More funds buying from vendors and less investment in teachers and staff.
- Q. More out of the box curriculum at cost of millions without results.

Many of the issues above would not have existed if accountability were adequate. And a local Inspector General can provide those checks and balances.

Baltimore County Public Schools has slid from being among the top in state rankings to a position of 17th among school districts. When I left the Baltimore County Public Schools 15 years ago, during my last meeting with staff I stated that BCPS was at a crossroads and warned that without necessary corrections, the school system would be on an irreversible downward spiral to the point where we could save schools but no longer salvage the system. After that, the number of successful schools will begin to steadily diminish and more and more money impacting all areas of the county budget needs will have to be redirected to the growing unsuccessful schools. Well, again we are at that critical stage at which we stood years ago and were faced with the same issues and solutions. Only this time the stakes are much higher, especially for the future of this county and its children. Over the years many leaders in government as well as education have ignored warning signs and that has brought us to where we are today.

The money we invest in failure is apparent, but yet we continue to lean on the futile hope that it will all get better. What do we think has happened to all those children who have left the system, even with meaningless diplomas, either undereducated or totally uneducated. And all occurring over the years and at greater expense to the parents, residents, and taxpayers! I wrote the foreword to the book *Failure Factory*. (I feel this book should be required reading throughout the nation and especially Maryland.)The admonitions in this book apply to many school districts including Baltimore County today. At the end of the foreword, I pose the question: Are children failing schools, or are schools failing children? That answer now rests with you. The initial key starts with ensuring openness and accountability. Senate Bill 15 provides a step in that direction for Baltimore County.

Inspector General Role and Responsibilities: From State to Local

The Maryland Office of the Inspector General for Education (OIGE) is an independent state entity that investigates fraud, waste, abuse, and mismanagement within local school systems, including Montgomery County Public Schools (MCPS). It ensures compliance with state/federal laws, reviews child abuse prevention policies, and handles complaints regarding civil rights violations, auditing, and financial oversight of educational funds.

Key roles and responsibilities include:

Investigating Fraud and Mismanagement: The OIGE investigates complaints of financial, administrative, or operational misconduct in local school systems.

Audit and Compliance: The office reviews policies, procedures, and contracts to ensure compliance with state and federal laws.

Civil Rights Enforcement: The office investigates complaints regarding civil rights violations involving students or employees.

Systemic Reviews: The OIGE examines systemic issues within the Maryland State Department of Education (MSDE) and local school boards, rather than just isolated incidents.

Child Abuse Prevention Oversight: The office conducts annual reviews to ensure that local school systems' policies for preventing and reporting child abuse comply with law.

Reporting: Upon completion of investigations, the OIGE issues public reports with findings and recommendations.

The Montgomery County Office of the Inspector General (separate from the State IG for Education) also has authority to investigate fraud, waste, and abuse in county government, including Montgomery County Public Schools (MCPS), with a high volume of complaints often directed at school operations.)

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2025, Legislative Day No. 13

Resolution No. 40-25

Councilmembers Marks & Kach

By the County Council, August 4, 2025

A RESOLUTION of the Baltimore County Council encouraging the Maryland General Assembly to pass legislation during the 2026 Legislative Session providing that the Baltimore County Board of Education is subject to the jurisdiction and oversight of the Baltimore County Office of the Inspector General.

WHEREAS, the Board of Education of Baltimore County and the County’s Public School System is supported substantially through funds provided by Baltimore County Government and County taxpayers; in fact, each year, approximately half of the County’s budget is appropriated to the County School System; and

WHEREAS, the Baltimore County Office of the Inspector General (OIG) was established in the Baltimore County Code by the Baltimore County Council in 2019 and codified in the County Charter by the County Council and County voters in 2024; and

WHEREAS, the purpose of the OIG is to provide increased accountability and oversight in the operations of County Government by identifying: (1) fraud, waste, and abuse in County Government; and (2) ways to promote efficiency, accountability, and integrity in County Government; and

WHEREAS, as the largest recipient by far of County funds, the County School System and County Board of Education, should also logically be subject to the independent oversight of the

OIG; and

WHEREAS, the General Assembly previously considered similar legislation requested by the Baltimore County Administration for OIG oversight of the County Board of Education during the 2021 Legislative Session in Senate Bill 655 (sponsored by then-Senator Klausmeier) and House Bill 751 (sponsored by Delegate Ebersole); and

WHEREAS, given the very public controversy this year over the County School System's budget, the Baltimore County Council believes it is now the appropriate time to advance more transparency and accountability in the County Board of Education, now therefore

BE IT RESOLVED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Council encourages the Maryland General Assembly to pass legislation during the 2026 Legislative Session providing that the Baltimore County Board of Education is subject to the jurisdiction and oversight of the Baltimore County Office of the Inspector General; and

BE IT FURTHER RESOLVED, that copies of this resolution shall be sent to the Governor of Maryland; the Baltimore County delegation to the Maryland General Assembly; and the Baltimore County Executive; and

BE IT FURTHER RESOLVED, that this Resolution shall take effect from the date of its passage by the County Council.

Executive Summary

This evaluation was conducted to examine two research questions regarding the *Language!* program. Dr. Joe A. Hairston and Dr. Renee Foose requested that the following research questions should be examined:

Question 1. What students have been and are being served by the *Language!* program?

Question 2. How has the program impacted student achievement?

With respect to the research questions that were examined, the results of this study indicate:

Question 1:

1. Enrollment in the program has increased and then decreased dramatically over a four year period.
 - a. The district should investigate the reasons for such dramatic differences in enrollment trends over time.
2. The program was brought to the school system to help high school students having difficulty passing the high school English graduation assessment; but the data clearly show:
 - a. Most students were enrolled in middle schools and not high schools;
 - b. Slightly over 37% of the students enrolled scored in the “Proficient” – over 34% - - or “Advanced” – over 3%; these students clearly do not meet the original criteria by MSA scores.
 - c. The district should determine how consistently the program is being implemented. If students are being enrolled in the program without meeting the criteria, this is problematic.

Question 2:

3. Eighty percent of the students who scored Basic on the MSA upon entry into *Language!* were still basic upon exiting the program.
 - a. The district should verify that the program has been implemented as prescribed at all schools at all levels.
4. The data used in this analysis was from the data warehouse. It is uncertain if the enrollments included here are a true reflection of the full number of participants in *Language!* For example, because the data points in this study are course enrolments, the

**An Examination of *Language!*
Baltimore County Public Schools**

numbers do not include students who participate in *Language!* as a part of a course that is not listed as an official *Language!* course. In addition, since course enrollments in the data warehouse only apply to secondary students, it is not certain exactly how many (if any) elementary students are participating in the program.

- a. The district should obtain an accurate count of students participating in the program and their home schools.

Detailed Summary

Background

This report was requested by Dr. Joe A. Hairston and Dr. Renee Foose. Dr. Hairston brought *Language!* to the Baltimore County Public Schools to help those students in high school who were having difficulty passing the High School English Graduation Examination. Dr. Hairston envisioned the program as a supplement to regular instruction in language arts.

Research Questions

The superintendent requested that the following research questions should be examined:

Question 1. What students have been and are being served by the *Language!* program?

Question 2. How has the program impacted student achievement?

Methodology

The Research Office utilized existing information in the data warehouse and supporting information from the Language Arts Office to compile the data presented in this report. In particular the enrollment trends of secondary students who have received services from the *Language!* program from SY2003 through SY2010. The report summarizes enrollment and demographic trends for *Language!* students based upon the first time they participated in the program through the time they exited the program. In addition, the study discusses connections between enrollment in *Language!* and achievement as defined by proficiency levels on the MSA and/or HSA.

It should be noted that due to data limitations, this report does not include elementary school students who may be or have been enrolled in this program. The trends in this report are based upon the first *Language!* course that students took.

**An Examination of *Language!*
Baltimore County Public Schools**

An Examination of *Language!* Baltimore County Public Schools

Findings

Findings for each research question will be reported with the supporting details and data immediately following.

Question 1: What students have been and are being served by the *Language!* program?

Overall analysis of the first research question yielded information that raised several critical issues which should be addressed by the Department of Curriculum and Instruction as well as the appropriate Assistant Superintendents:

1. Enrollment has increased and then decreased dramatically over a period of four years.
2. The program was brought to the school system to help high school students having difficulty passing the high school English graduation assessment; but the data clearly show:
 - a. Most students were enrolled in middle schools and not high schools;
 - b. Slightly over 37% of the students enrolled scored in the “Proficient” – over 34% - - or “Advanced” – over 3%; these students clearly do not meet the original criteria by MSA scores. A student being enrolled in the program having not met the criteria is problematic.

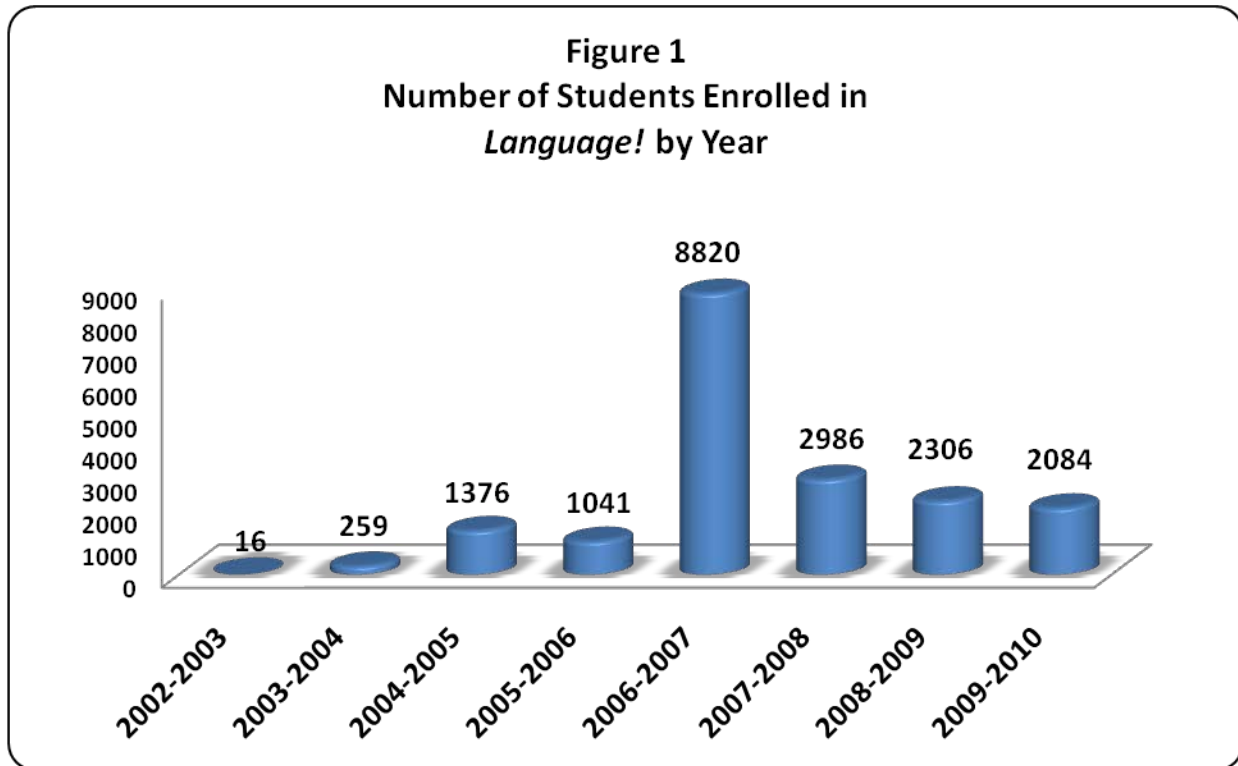

Data and Analyses Supporting Findings for Research Question 1:

Overall Enrollments

Figure 1 depicts the number of students enrolled in *Language !* by year. Specifically, the figure shows that:

- Since 2003, 18,889 students have participated in *Language!*
- Since 2003, the number of secondary students receiving *Language!* services varied.
 - In 2003 (the first time this program appears in the database), there were 16 students enrolled. By 2007, there were 8,621 students enrolled.
 - The number of enrolled students has declined three successive years since 2007: 2,996 in 2008, 2,306 in 2009 and 2,084 in 2010.

An Examination of *Language!* Baltimore County Public Schools

Subgroup Enrollments and Grade Level Enrollments

The following figures and analyses report the number of students in various subgroups enrolled in *Language!* by year. Specifically, Figure 2 shows gender:

- Looking at gender for all years combined: 56% of *Language!* enrollees were male and 44% were female. Across years, eliminating 2003 (with only 16 students), the gender percentages vary: For example, the percentage of males was as high as 60% in 2005 and as low as 51% in 2004.

**An Examination of *Language!*
Baltimore County Public Schools**

Figures 3 and 4 depict enrollment by grade in secondary schools. Specifically:

- Overall 80% of the students served were in middle school. In 2010, 83% were in the middle grades. The largest numbers of students tend to be in grade 6, and the number served decrease with each successive grade level.

Because *Language!* was newly introduced in the high schools and the trends of enrollment in high school seemed different than those within the middle schools, an analysis was completed looking at trends in high school enrollment

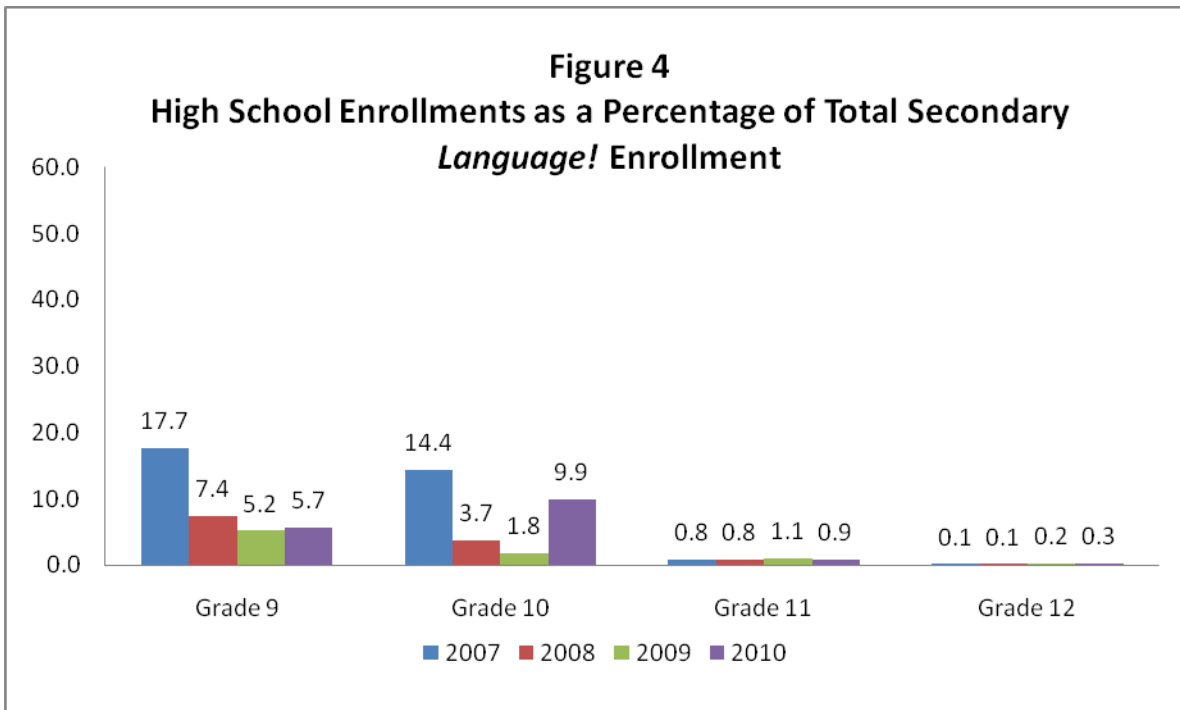

- Prior to 2007, no high school students were enrolled in *Language!*
- Since 2007 and to date, 3,779 students took a *Language!* class for the first time while in high school
- Of the high school students who since 2007 took a *Language!* class for the first time, 2,015 took that class in Grade 9
 - 20% of the first time takers in Grade 9 were in special education

An Examination of *Language!* Baltimore County Public Schools

- Of the first time takers in Grade 9, 43% continued into a second year, but only 6% stayed for more than 2 years. These percentages are the same for both Special Education and Non Special Education students.
- 77% (1,554) of the 2,015 Grade 9 first-time takers took *Language!* for the first time in 2006-2007 school year
- 15,110 students started in *Language!* before Grade 9. Of those, 3,535 (23%) continued taking it after they entered high school.
- After school year 2006-2007, the number of students who continue in *Language!* from 8th grade into 9th grade has continually and dramatically declined.

**An Examination of *Language!*
Baltimore County Public Schools**

*Note: Prior to 2007, there were no students in high school enrolled in *Language!*

Figure 5 depicts enrollment by race. Specifically:

- Overall 33% of all enrolled students were White and 54% were African American. These were followed by Hispanic (~7.5%) and Asian (5%), and American Indian (~0.6%). The distribution by race has remained consistent since 2007.

**An Examination of *Language!*
Baltimore County Public Schools**

**Figure 5
Enrollment in *Language!* by Racial Groups as a Percentage
of Total Enrollment by Year**

White	7	70	52	38	31	30	29	34
Multi-Racial	0	0	2	2	1	2	0	0
Hispanic	0	0	2	2	6	7	7	8
Asian	0	1	2	4	5	5	6	5
American Indian	0	1	0	1	1	1	0	1
African American	93	28	43	54	56	56	59	52

The enrollment trends of other subgroups are depicted below.

- Overall 55% of the *Language!* secondary students were eligible for FARMS.
- On average, 29% of the students had IEPs
- 7% of the students were receiving ELL services

**An Examination of *Language!*
Baltimore County Public Schools**

**Figure 6
Special Education Enrollment in *Language!* by
Year**

**Figure 7
ELL Enrollment In *Language!* by Year**

An Examination of *Language!* Baltimore County Public Schools

Length of Time in *Language!*

The following figures and analyses report the number of students and the length of time in the program.

- Of the 18,889 students who ever enrolled in *Language!* between 2003 and 2010, 37% were enrolled for one year, 36% were enrolled for two years, 23% were enrolled for 3 years, and 5% were enrolled for between four and six years.
 - These proportions were similar for all groups when broken down by gender, FARMS, and race.
 - Special Education students' length of enrollment had a similar pattern with the following exceptions: a smaller percentage were enrolled for just one year (25%) and a higher percentage were enrolled for four (8%) or five (1.2%) years.
- *Language!* was disaggregated and analyzed by course title (see Appendix 1 & 2). This analysis showed differences in enrollment by course.
 - *Language!* is taken predominantly as a middle school course as illustrated in Appendix 1
 - *Language!* 6A was taken by 4,524 cohort students (24.6% of the total *Language!* enrollment over its 8 years of existence), the most frequent course.
 - The next five most frequently taken courses were *Language!* 7C (2080, 11.3%), *Language!* 6C (1,412, 7.7%), Language 8C (1,325, 7.2%), English 9C (1,294, 7.0%), Literacy/Language 10 (1,215, 6.6%).
 - Appendix 2 shows the number of total enrollments in *Language!* over 5 years. From 2005 to 2010, this number reflects 57,166 enrollments. The number of enrollments does not drop as it does for the first-time takers. This shows that students are not being placed into *Language!* at high rates within the last three years. However, students seem to be continuing in the program if they are already in it.

**An Examination of *Language!*
Baltimore County Public Schools**

**Figure 8
Lenth of Time Students Continued in *Language!*
by Year Entered Program**

**An Examination of *Language!*
Baltimore County Public Schools**

Achievement of Students Prior to Being Enrolled in *Language!*

- MSA Reading performance levels of first-time participants in *Language!* were analyzed for the time period between SY2003 through SY2009.
- More than half of all first-time *Language!* participants between SY2003 through SY2010 have scored Basic on the MSA Reading immediately prior to participating in *Language!*
 - 62.7% of students scored Basic, 34.2% of students scored Proficient, and 3.1% of students scored Advanced.
- Each year since SY2003, student achievement on the MSA Reading has fluctuated within and across proficiency levels.
 - The percentage of first-time *Language!* students scoring Basic peaked at 87.1% in SY2005 and dropped to an all-time low of 42.3% in SY2009. During the same time period, the percentage of students scoring Proficient was at an all-time low of 12.5% and nearly quadrupled to 50.9%.

An Examination of *Language!* Baltimore County Public Schools

- SY2003 is the year in which 14.5% of students scored Advanced, the largest percentage over the seven-year time period.
- A slightly greater percentage of male students than female students were Basic, whereas a slightly greater percentage of female students than male students were Proficient and Advanced.
 - 64.4% of male students scored Basic, 32.6% scored Proficient, and 2.9% scored Advanced.
 - 60.3% of female students scored Basic, 36.3% scored Proficient, and 3.3% scored Advanced.
- When split by race, the largest percentage of students in each race category were Basic, ranging from 59.1% for White students to 65.5% percent for African American students
- When split by race and gender, both male and female students had the largest percentage of students scoring Basic within race categories.
 - African American males had the largest percentage of Basic students (67.5%) and American Indian males had the lowest percentage of Basic students (53.5%).
 - American Indian students had the greatest percentage of Basic students (70.0%) and White females had the lowest percentage of students scoring Basic (57.35%).
- The number of years a student has participated in *Language!* ranged from one to six years. Across all years, the greatest proportion of students scored Basic.
 - The greater the length of time in the program, the greater the percentage of students who scored Basic, without exception.
 - Among students who participated Language for one year, 50.2% scored Basic, whereas among students who participated in *Language!* for six years, 90.0% scored Basic.
- Among students designated as ELL, FARMS and SPED, the greatest percentage of students within each designation scored Basic.
 - 73.5% ELL students scored Basic; 66.9% of SPED students scored Basic; and 64.7% of FARMS students scored Basic.
 - When compared to ELL (1.6%) and FARMS (2.7%), SPED students had the highest percentage of students who scored Advanced (4.3%) immediately prior to participating in *Language!*

An Examination of *Language!* Baltimore County Public Schools

- A greater percentage of students designated as FARMS scored Proficient (32.6%), compared to the percentages of students designated as ELL (24.9%) and SPED (28.7%) who scored Proficient.

An Examination of *Language!* Baltimore County Public Schools

Question 2: How has the program impacted student achievement?

Tables 1 through 4 indicate that the impact of *Language!* on secondary students as measured by state-wide assessment data are mixed at best.

- Two-thirds of the students in the Total group had scored Basic on the MSA prior to participating in *Language!* This also means that one-third of the students were either Proficient or Advanced going into the program.

- Eighty percent of the students who scored Basic on state-wide assessments before participating in *Language!* were still Basic after exiting the program.

- Of the students who scored Proficient or Advanced before participating in *Language!*, half exited at a lower performance level (i.e., proficient to basic or advanced to basic/proficient).

- When subdivided by the various student groups (e.g., race, gender, FARMS), the results were similar to the total group.

Data and Analyses Supporting Findings for Research Question 2

Analyses conducted to determine the impact on student achievement:

The MSA proficiency levels for middle school students the school year prior to their participation in *Language!* was compared with the students' Reading MSA or English 10 HSA proficiency level the school year after the they stopped participating. There were 3,673 students for whom complete data were available (i.e., they had both a pre- and a post- MSA and or/HSA score). Cross-tabulations were produced for the total group as well as for subgroups (race, gender, FARMS, ELL, special education). Of the 3,673 students with both pre-test and post-test scores, only 500 students (13%) had MSA reading scores as the post test measure, meaning that the majority of students with both pre-test and post-test scores entered the program in middle school and exited the program in high school.

Demographic composition of the Total group

No ELL	Yes ELL
97.9	2.1

ELL students were a small fraction of the total.

Table 5. Percent of Students in Total group by Special Education Status

No Spec Ed	Yes Spec Ed
72.2	27.8

Special education students were overrepresented in the Total group.

Table 6. Percent of Students in Total group by Number of Years in *Language!*

1 year	2 years	3 years	4 or more years
30.9	39.8	23.4	5.8

7 out of 10 students were in the program up to 2 years.

Table 7. Percent of Students in Total group by Beginning Grade Level in *Language!*

Grade 6	Grade 7	Grade 8	Other
20.3	38.5	31.8	9.4

9 out of 10 students in the data base started the program in middle school.

**An Examination of *Language!*
Baltimore County Public Schools**

2 out 3 students were basic on the state tests prior to participating in *Language!*

Of the basic students, 8 out of 10 were still basic on state tests after exiting the program.

**An Examination of *Language!*
Baltimore County Public Schools**

Of the students who were proficient or advanced before *Language!*, half exited at a lower performance level (i.e., proficient to basic or advanced to basic/proficient).

**An Examination of *Language!*
Baltimore County Public Schools**

Recommendations

1. Most students were enrolled in middle schools and not high schools. Yet, the original intent of the program was to support students at the high school level. The district should **investigate the consistency of implementation and determine which level would benefit best from the program.**
2. The data that were analyzed for the current study indicate that one-third of the students who selected for participation in *Language!* scored either Proficient or Advanced on the MSA prior to entering the program. This finding suggests the need for the district's **Curriculum and Instruction unit to review the criteria for participating *Language!* particularly at the Middle School level.**
3. Eighty percent of the students who scored Basic on the MSA upon entry into *Language!* were still basic upon exiting the program. This finding suggests that the district should **verify that the program has been implemented as prescribed, consistently at all schools at all levels.**
4. The data used in this analysis was from the data warehouse. It is uncertain if the enrollments included here are a true reflection of the full number of participants in *Language!* For example, because the data points in this study course enrolments, the numbers do not include students who participate in *Language!* as a part of a course that is not listed as an official *Language!* course. In addition, since course enrollments in the data warehouse only applies to secondary students, it is not certain exactly how many (if any) elementary students are participating in the program. This suggests the need for the district to **obtain an accurate count of students participating in the program and their home schools.**

**BALTIMORE COUNTY PUBLIC SCHOOLS
Executive Summary**

**Report on *Language!*
January 24, 2012**

Language! is an intensive language arts intervention program that is used with identified secondary students who are struggling readers. The goal of the intervention is to provide students with grade-level proficiency by using a sequential, cumulative, skill-based instructional format that addresses all learning styles. This program targets a small number of students and is intended to supplement the core instructional program.

BCPS has pre- and post-instruction information for 5,771 students in Grades 6 through 10 who participated in the *Language!* program for two years. The data show that the majority of enrolled students demonstrated growth on the internal measures within the program. The Office of Research, Accountability and Assessment is gathering additional disaggregated data to be shared with the Board of Education.

Next steps include continuing to collect and analyze data to determine the ongoing impact of the program, recertifying of central office language arts personnel so they are available to provide support to the program, and central office collaboration with middle and high school principals on instructional decisions to support students with language arts learning needs.

Brief Research Report

An Examination of *Language!* September 9, 2011

Office of Research
Dr. Tamela H. Hawley, Director
Dr. Renard A. Adams, Coordinator
Dr. Gary L. Brager, Supervisor
Samantha Murray, Specialist
Everett Elliott, Resource Teacher

Dr. Joe A. Hairston
Superintendent of Schools

Background

This report was conducted to examine two research questions regarding the *Language!* program. Dr. Joe A. Hairston and Dr. Renee Foose requested that the following research questions be examined:

Question 1. What students have been served by the *Language!* program?

Question 2. How has the program impacted student growth in reading based upon measures within the *Language!* program?

Methodology

Student data entered into the *Language!* program database system were extracted and matched with unique identification numbers within BCPS data systems. The resulting dataset contained 5,771 student records. Students' demographic information and performance measures associated with the *Language!* program were then analyzed for this report.

What students have been served by the *Language!* program

Between the fall of 2005 and spring of 2010, 5,771 students were served by the *Language!* program. The majority of those students were African American (55%), with White (33%) students comprising the second most-served student group. Minority students comprised 65% of all students served by the *Language!* program. Figure 1 shows the *Language!* enrollment by race.

An Examination of *Language!* Baltimore County Public Schools

Figure 2 shows the percentage of *Language!* students eligible for special services. Of students served by the *Language!* program, 63% were eligible for FARMS services, 41% were eligible for special education services, and a small percentage (7%) were eligible for ELL services.

How has the program impacted student growth in reading based upon measures within the *Language!* program?

The *Test of Silent Word Reading Fluency (TOSWRF)* measures a student's ability to recognize printed words accurately and efficiently. The *Degrees of Reading Power (DRP)* is a criterion-referenced reading comprehension tests for students in grades 1 through 12. Both the TOSWRF and the DRP are internal measures used within the *Language!* program. Students' achievement scores on these tests were converted to a grade equivalent score.

The grade equivalent score expresses the grade level of students who, on average, demonstrate a particular achievement score when tested. Students demonstrating on-grade achievement typically obtain grade equivalent scores which meet or exceed the grade and month of the school year in which they are enrolled. That is, a grade 4 student who is on grade level at the beginning of the school year may earn a grade equivalent score in reading of 4th grade, 0 months, which is written as 4.0. Grade equivalents can be useful for measuring individual growth from one year to the next and for estimating a student's developmental status in terms of grade level. By comparing students' starting reading grade equivalents to the grade equivalents on either the

An Examination of *Language!* Baltimore County Public Schools

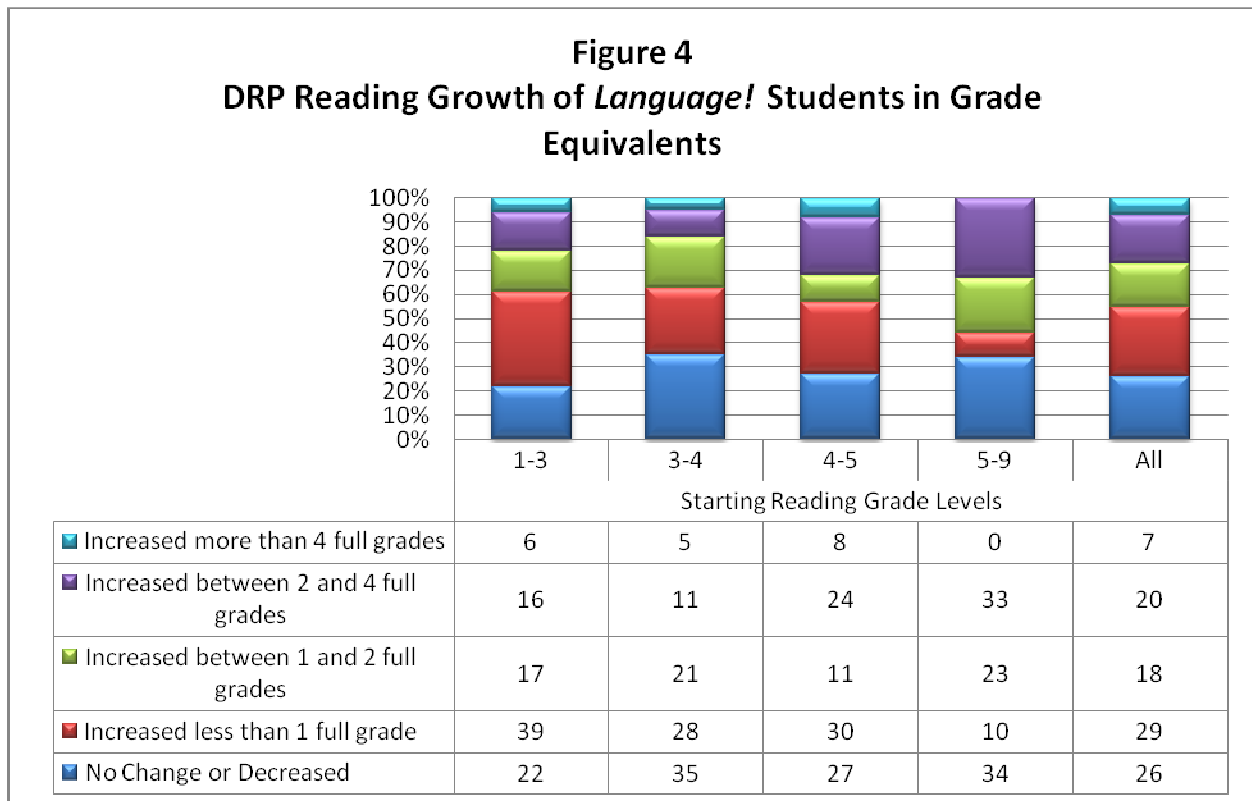

TOSWRF or DRP after two years of instruction, student growth within the program was examined. Student growth is presented in Figures 3 and 4.

Figure 3 shows the percentage of students making various amounts of growth on the TOSWRF, grouped by starting grade equivalent tiers. For the total group with all tiers combined, 89% of students exhibited growth. Among starting grade equivalent tiers, the greatest student growth was seen within the 1-3 grade level tier where 93% of students demonstrated an increase, with 33% demonstrating an increase of more than four grade equivalents.

**An Examination of *Language!*
Baltimore County Public Schools**

Figure 4 shows the percentage of students making various amounts of growth on the DRP, grouped by starting grade equivalent tiers. While growth on this measure was not as strong as on the TOSWRF, it was still positive. For the total group with all tiers combined, 74% of students exhibited growth. Among the starting grade equivalent tiers, the greatest student growth was again seen within the 1-3 grade level tier where 78% of students demonstrated growth as measured by the DRP.

Conclusions

With regard to the research questions, the following conclusions were drawn:

1. 5,771 students were enrolled in the *Language!* program between 2005 and 2010. Sixty-five percent (65%) of all enrolled students were minority students, 63% were eligible for FARMS services, and 41% were eligible for special education services.
2. After two years of instruction, the vast majority of students enrolled in *Language!* demonstrated growth on the internal measures within the program.
 - a. Eighty-nine percent (89%) of students demonstrated growth as measured by the *Test of Silent Word Fluency*; and
 - b. Seventy-four percent (74%) of students demonstrated growth as measured by the *Degrees of Reading Power*.

Language! Update

Board of Education
January 24, 2012

Language! 2005–2006

- Dr. Hairston introduced a reading/language arts intervention for secondary students to prepare for the English HSA.

What is *Language!* ?

Language! is a comprehensive reading and language arts intervention/acceleration program designed for older, struggling readers.

Language! 2006–2007

- The targeted audience was Grade 6–10 students.
- During the initial year, it was offered in every high school and middle school.

Language! 2006–2010

Student Enrollments by Race

Percent of *Language!* Students Eligible for Special Services 2006–2010

FARMS	Special Education	ELL
63.1%	41.2%	7.4%

Language!

- Progress in *Language!* is monitored through the use of two assessments:
- *Test of Silent Word Reading Fluency*
- *Degrees of Reading Power*

Language! Conclusions

- The results of 5,771 students' *Language!* assessments were reviewed.
- The following results are for students who participated in two years of instruction.

Test of Silent Word Reading Fluency

Starting Reading Grade Level	1-3	3-4	4-5	5-9	All
% Students with 1 to 4+ Years Growth	77%	60%	69%	69%	69%

Degrees of Reading Power (Comprehension)

Starting Reading Grade Level	1-3	3-4	4-5	5-9	All
% Students with 1 to 4+ Years Growth	39%	37%	43%	56%	45%

Principal's Comments

- ▶ Dr. Jane Barranger, principal of Towson High School, has been asked to provide testimony about the use of *Language!* in her school over the last seven years.

Language! Next Steps

- Recertify members of the English office as *Language!* trainers.
- Identify schools offering *Language!* to students in 2012–2013.
- Provide professional development and support to teachers.

Language! Next Steps

- Identify instructional conditions where more student success was experienced.
- Confirm a consistent method for recording *Language!* progress.
- Provide consistent evaluation of interventions.

Foreword to *Failure Factory* Book

In his book, *Failure Factory*, Chris Papst explores a topic vital to survival of a city and state, both socially and economically - education. Specifically, Baltimore City Public Schools. In his writing, Papst provides the public a lens by which to capture the internal functions of the district, portraying both failures and successes. There are those who argue and try to dismiss the reporting on realities in educational systems, such as that featured in this book, as incendiary and exacerbating to the current issues without resolving them. Mr. Papst views positive and negative aspects of the situation. Using personal anecdotes, he provides insight, which extends far beyond what is often afforded to the public, into the mechanisms of education. Accordingly, the facts put forth in this book consistently underlie the case for necessary reforms in education – for the welfare of all students.

Mr. Papst provides a factual basis for the assertions expressed in the book. His documentation is based on intense investigations over time. And, whether some critics would acknowledge it or not, his descriptions reflect not just the current educational occurrences in one major city, but what is happening across the nation. When considered proactively, rather than reactively, he provides readers the opportunity to analyze negative circumstances impacting students in order to collaborate and develop solutions – as an informed public. To that end, Mr. Papst’s text furnishes what is often missing in communication between school districts and their vulnerable clients, transparency.

All parents, whether classified majority or minority, bring their children to the schoolhouse door and trust those in charge to educate them to help fulfill their futures, even in ways that parents themselves cannot. Yet too often that promise is not kept, and trust with the system breaks down. In his analysis, Papst makes clear that determining solutions can only be accomplished as a joint effort, across constituencies and involving multiple segments of the community. Simply, he poses that this is no time for those in authority to become defensive; rather, it is past time to come to the defense of those who are most vulnerable and voiceless – the children. Along that vein, Mr. Papst provides voice to parents who too frequently have been sidelined or totally marginalized.

Failure Factory does not call for the annihilation of education systems. It does demand recognizing what is not working or simply wrong and then pursuing corrections. Educational institutions have evolved into a new bureaucracy. We must sometimes wonder what happened with the sacred mission – when was it sacrificed and to what purpose? The issues surrounding minorities and the poor not being adequately educated have gone on for over a century. The matters get more focus today basically due to mass media and the Web. And frankly some don’t like what they see. Now, via this book, the public can observe closely the faulty practices, ineffective work arounds and solutions that don’t work, but continuously get repackaged for public consumption.

Throughout his writing, Mr. Papst goes beyond simply providing a single-blame narration for decades of underachievement. He challenges parents and the public in general to act against the laissez faire attitude toward the education of children which has increased particularly in recent

years. Although he speaks to parental responsibility and engagement, Mr. Papst steadily rebuts the allegation that parents should bear inordinate blame for academic failure. Is it fair to blame parents for their children's lack of educational success, when many parents themselves were undereducated by the same school system their children now attend?

As a journalist, Mr. Papst demonstrates the courage to challenge powerful bureaucracies by holding those at the top accountable. He also rejects the premise that the reason for a lack of appropriate education rests on the parents and students themselves based on their living conditions. For although those factors play a role, they are not insurmountable. After all, school systems receive billions of tax dollars intended for the sole purpose of educating students – not some students, but all students. And that mission should not be predicated on the environment from which the students leave when they enter the schoolhouse.

In addition to intense scrutiny of achievement among students and academic challenges, particularly minorities and poor, Mr. Papst also deeply explores topics such as grading, promotions, discipline, school safety, and violence while providing cogent examples. Through the book and its stories, Mr. Papst raises questions about whether or not the situation is truly the failure of children or the failure of systems to address their needs. Is this phenomenon due to the students failing academically or the way in which they are being educated? In other words, are children failing school or are schools failing children?

Senator Shelly Hettleman, Chair
Baltimore County Senate Delegation

Kelly Olds, TABCO President, Educator
410-507-6195

Friday, February 13, 2026

I am in support of Senate Bill 15, Senator Jackson's bill allowing the Baltimore County Council to expand the authority of the Baltimore County Inspector General to include the Baltimore County Public School system.

TABCO members have spoken through their legislative body- the Representative Assembly- to support this bill, and I am honored to be here today to bring their voices forward.

Firstly, we applaud the structure of this bill: allowing the county council to make this decision is the right move. We have an expanding council to be elected soon. Let these new leaders consider this question, let them hold hearings, let the community be part of the discussion- all of that is "small d" democratic, and the right kind of policy for our county and state.

Second, let me talk about trust. Over 100,000 families entrust their children to BCPS because they trust the school leaders who care for those children. The possibility of increasing oversight of BCPS would deepen the trust that the people of Baltimore County have in their school system. The possibility of an additional set of eyes making sure everything is right puts people at ease, as it should. This also provides a nonbiased avenue to address concerns that may arise.

We think the structure and aim of this bill makes sense for Baltimore County and we support SB 15s passage.

Thank you

February 16, 2026

From: League of Women Voters Baltimore County
To: Senator Feldman, Chair, and Members of the Senate EEE Committee

The League of Women Voters of Baltimore County appreciates the opportunity to provide written testimony in strong support of Senate Bill 15, which grants the Baltimore County Inspector General authority to include oversight of Baltimore County Public Schools (BCPS). The League's mission is to promote effective, transparent, and accountable government that serves the public interest. Central to that mission is ensuring that taxpayer dollars are spent responsibly and that public confidence in local government, particularly in education, remains strong.

BCPS now represents almost half of Baltimore County's total budget, with appropriations approaching \$2.5 billion annually. Despite this major investment, many residents express concern about whether these resources are allocated effectively and whether educational outcomes reflect this level of spending. Budget requests for BCPS have steadily grown to exceed \$2.5 billion, yet far too many citizens still do not see meaningful improvements for their children, their schools, or their communities.

The League supports independent oversight as an essential safeguard to ensure integrity, transparency, and accountability in public administration. The Baltimore County Council has already recognized this need by adopting a resolution to expand the Inspector General's authority. Senate Bill 15 builds on that local action by providing the clear legal framework necessary to prevent waste, fraud, and abuse across all county operations, including the school system that serves our children and families.

This bill reflects the principles of transparency, accountability, and good governance that the League of Women Voters has long championed and that Baltimore County residents expect and deserve.

We respectfully urge your favorable support of Senate Bill 15.

Sincerely,

A handwritten signature in blue ink that reads "Ramona N. Johnson". The signature is written in a cursive style with a large, flowing "R" and "J".

To: Education, Energy, and the Environment Committee

From: Rebecca Snyder, Executive Director, MDDC Press Association

Date: February 16, 2026

Re: MDDC FAVORABLE SB 15

The Maryland-Delaware-DC Press Association (MDDC) represents a diverse membership of news media organizations. Our membership includes large metro dailies such as *The Washington Post* and *The Baltimore Sun*, hometown newspapers such as *The Star Democrat* and *Dorchester Star*, specialty publications such as *The Daily Record* and *Baltimore Jewish Times*, and leading online news organizations such as *Baltimore Banner*, *Maryland Matters*, and *Baltimore Brew*. Our membership spans both for-profit and nonprofit models and reflects the full ecosystem of local journalism that Marylanders depend on every day.

The Press Association supports SB 15, which would allow the Baltimore County council to grant to the Inspector General the same authority over Baltimore County Public Schools that it has over a department of county government.

We support the maximum flow of information within government and the transparency of the Inspector General reporting. Inspector General reports often provide frequently useful information about government operations and spending that would not be available otherwise, and the public is entitled to know what is happening in the school system.

We respectfully urge a favorable report on SB 15.

We believe a strong news media is central to a strong and open society.

SB0015 Testimony Against.pdf

Uploaded by: Tom Henry

Position: UNF

Testimony in Opposition to SB0015F – Accountability Concerns

Position: UNFAVORABLE

Dear Chair, Vice Chair, and Members of the Education, Energy, and the Environment Committee,

My name is Tom Henry, and I am writing to formally express my opposition to SB0015 and its cross-file, HB0089.

While these bills are presented as expanding oversight of Baltimore County Public Schools (BCPS), they do not create meaningful accountability and instead establish a delayed and optional framework that risks misleading the public into believing reform has occurred when it has not.

First, the legislation delays and weakens oversight.

HB 89/SB0015F does not mandate oversight of BCPS by the Baltimore County Office of the Inspector General (OIG). Instead, they provide that beginning in 2027, the Baltimore County Council **may** enact a local law extending the OIG's authority to the school system. This language **makes oversight discretionary rather than guaranteed**. If independent review of BCPS is necessary, postponing action and leaving it to future political will undermines the urgency and seriousness of the issue.

Second, the structure of the OIG does not provide enforcement authority.

Even if the County Council later grants the OIG jurisdiction over BCPS, the Inspector General's role remains investigative and advisory. The OIG can review records, conduct investigations, issue reports, and refer findings to appropriate authorities. However, the office cannot prosecute, impose discipline, remove officials, or compel corrective action on its own. Accountability therefore depends entirely on other bodies choosing to act. Oversight that ends with a report and referral, without guaranteed enforcement mechanisms, does not ensure consequences.

Third, Baltimore County's history demonstrates the vulnerability of watchdog oversight.

The experience surrounding the tenure and departure of former Inspector General Kelly Madigan highlighted the political tensions that can arise when oversight functions challenge established interests. That history raises concerns about whether expanded authority, without additional structural protections and independence, will produce effective reform or merely extend existing conflicts.

Finally, the bill risks creating the appearance of reform without delivering results.

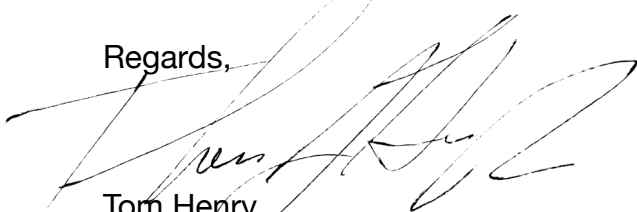

Taxpayers and families expect transparency, integrity, and responsible stewardship of public resources. Legislation that delays action, makes oversight optional, and does not strengthen enforcement may provide a public relations talking point, but it does not ensure accountability in practice.

If the General Assembly intends to strengthen oversight of BCPS, a more effective approach would be to establish mandatory, immediate authority, coupled with clear independence safeguards and mechanisms that ensure investigative findings lead to meaningful action.

For these reasons, and until the Baltimore County OIGs role is strengthened, I urge the committee to issue an unfavorable report on SB0015F.

Thank you for your consideration.

Regards,

A handwritten signature in black ink, appearing to read 'Tom Henry', is written over the 'Regards,' text.
