

Declaration of Dr. R. Karl Hanson.
United States District Court for the Northern District of California.
Civil Case No. C 12 5713. Filed 11-7-12

Selection:

I, R. Karl Hanson, declare as follows:

I am a Senior Research Scientist at Public Safety Canada. Throughout my career, I have studied recidivism, with a focus on sex offenders. I discuss in this declaration key findings and conclusions of research scientists, including myself, regarding recidivism rates of the general offender population and sex offenders in particular. The information in this declaration is based upon my personal knowledge and on sources of the type which researchers in my field would rely upon in their work. If called upon to testify, I could and would competently testify thereto.

Summary of Declaration:

My research on recidivism shows the following:

- 1) Recidivism rates are not uniform across all sex offenders. Risk of re-offending varies based on well-known factors and can be reliably predicted by widely used risk assessment tools such as the Static-99 and Static-99R, which are used to classify offenders into various risk levels.
- 2) Once convicted, most sexual offenders are never re-convicted of another sexual offence.
- 3) First-time sexual offenders are significantly less likely to sexually re-offend than are those with previous sexual convictions.
- 4) Contrary to the popular notion that sexual offenders remain at risk of reoffending through their lifespan, the longer offenders remain offence-free in the community, the less likely they are to re-offend sexually. Eventually, they are less likely to re-offend than a non-sexual offender is to commit an "out of the blue" sexual offence.
 - a) Offenders who are classified as low-risk by Static-99R pose no more risk of recidivism than do individuals who have never been arrested for a sex-related offense but have been arrested for some other crime.
 - b) After 10 - 14 years in the community without committing a sex offense, medium-risk offenders pose no more risk of recidivism than individuals who have never been arrested for a sex-related offense but have been arrested for some other crime.
 - c) After 17 years without a new arrest for a sex-related offense, high-risk offenders pose no more risk of committing a new sex offense than do individuals who have never been arrested for a sex related offense but have been arrested for some other crime.
- 5) Based on my research, my colleagues and I recommend that rather than considering all sexual offenders as continuous, lifelong threats, society will be better served when legislation and policies consider the cost/benefit break point after which resources spent tracking and supervising low-risk sexual offenders are better re-directed toward the management of high-risk sexual offenders, crime prevention, and victim services.
