House Bill 755 – *County Boards of Education – Student Personal Electronic Device Use Policy – Establishment (Phones Away for the School Day Act)*

LETTER OF INFORMATION

The Maryland Chapter of the American Academy of Pediatrics (MDAAP) is a statewide association representing more than 1,100 pediatricians and allied pediatric and adolescent healthcare practitioners in the State and is a strong and established advocate promoting the health and safety of all the children we serve. On behalf of MDAAP, we submit this letter of information for House Bill 755.

As pediatricians, we are deeply committed to promoting the health and well-being of children and adolescents. We know from both research and clinical experience that the use of cell phones in schools presents complex challenges, including impacts on academic focus, mental health, and peer relationships. The American Academy of Pediatrics (AAP) has developed a **Resource Guide for Pediatricians: School Phone Policies**, which we encourage this Committee to review as it explores policy solutions. The guide offers evidence-based recommendations on the role of cell phones in schools and strategies for balancing educational needs with the realities of technology in students' lives. The resource can be accessed here: [Resource Guide for Pediatricians: School Phone Policies](#)

We also wish to draw your attention to a specific concern regarding proposed legislation that includes "health" exemptions to school phone use restrictions. While we understand the intent to support students with documented medical conditions, such provisions, if broadly defined, could unintentionally burden pediatricians and other healthcare providers with an influx of appointment requests from families seeking exemptions for their children to retain phone access. This could divert critical time and resources away from other essential healthcare needs. To mitigate this risk, we recommend that any proposed exemptions include clear and specific criteria for medical necessity. We also suggest working collaboratively with schools, healthcare providers, and families to ensure policies are both practical and equitable in implementation.

Thank you for your attention to this important matter and for your commitment to the well-being of Maryland's children.
